==> ARRL TELLS RED CROSS OF REMAINING BACKGROUND CHECK POLICY CONCERNS

ARRL President Joel Harrison, W5ZN, has written to Armond T. Mascelli, Vice President for Domestic Disaster response for the American Red Cross (ARC) to identify the ARRL's remaining concerns over the background check policy for ARC partners. Harrison emphasized that the commencement of negotiation of a replacement Statement of Understanding (SOU) between the two organizations should not be further delayed while these concerns are resolved and that he looked forward to signing a new SOU once additional edits to the background check Disclosure Form and clarifications of the background check Authorization Form are in place for those radio amateurs who volunteer their service to the Red Cross.

Harrison first wrote to Mascelli on November 28, 2007, setting out the ARRL's concerns with the background check procedures recently implemented by the ARC. ARC now requires a background check for Amateur Radio volunteers seeking to support a Red Cross disaster relief response for more than a seven day period. In the ARRL's view, Amateur Radio volunteers were being asked to consent to a more intrusive background check than was necessary or appropriate.

Mascelli's reply on May 8, 2008, addressed some of the ARRL's concerns and Harrison's latest letter to the ARC -- sent on June 30, 2008 -- recognizes considerable improvement in the forms related to the background check procedures that are linked via the ARC's Web site; however, Harrison also states that analysis of the forms has revealed two continuing problems:

* The Authorization for Background Investigation consent form still contains "some highly equivocal and broad language which, because of its ambiguity, will inevitably discourage substantial numbers of radio amateurs from participating in the background check process." This form was not included with Mascelli's reply and was not seen by the ARRL until later.

* The "Disclosure Regarding Background Investigation" can still be construed as overly broad, although this can be corrected by fairly simple edits.

Harrison told Mascelli, "We do not want the implementation of these additional changes to further delay the negotiation of the terms of a replacement SOU. A new SOU is, in my view, a critical and urgent matter. Because the old SOU expired on September 16, 2007, the vacuum thereafter has served neither ARRL nor ARC well." ARRL and ARC staff are ready to work on a draft replacement SOU, the text of which will be reviewed by the ARRL's Programs and Services Committee and approved by either the Executive Committee or the Board prior to completion.

Harrison concluded, "We look forward to continuing to provide seamless disaster response communications by Amateur Radio and to enhancing and expanding ARRL's proud partnership with the American Red Cross. I look forward to meeting with you and executing the new SOU once additional edits to the Disclosure Form, and adequate clarifications are included in the Authorization Form that appears on your web site for partner organizations are made, and when the new SOU terms are agreed upon."

==> AN ERA COMES TO A CLOSE AS RILEY HOLLINGSWORTH, K4ZDH, RETIRES

On Thursday, July 3, Special Counsel for the Spectrum Enforcement Division of the FCC's Enforcement Bureau Riley Hollingsworth, K4ZDH -- the man who has come to embody Amateur Radio Enforcement -- said goodbye to the FCC as he retired and began his life as a private citizen. In May, Hollingsworth announced he would definitely retire; he had contemplated retiring in January 2008, but cited "several issues on the table that I want[ed] to continue to work through with the amateur community." While his successor has not yet been named, he was quick to point out that the FCC's Amateur Radio enforcement program will continue.

Hollingsworth said that he has "loved" working for the FCC and has "always had great jobs, but this one involving the Amateur Radio Service has been the most fun and I have enjoyed every day of it. I've worked with the best group of licensees on earth, enjoyed your support and tremendous FCC support and looked forward every day to coming to work. The Amateur Radio Enforcement program will continue without missing a beat, and after retirement I look forward to being involved with Amateur Radio every way I can. I thank all of you for being so dedicated and conscientious, and for the encouragement you give us every day."

Saying it has been a "privilege to work with and for the Amateur Radio licensees and the land mobile frequency coordinators," Hollingsworth said that he is "extremely fortunate to work for two wonderful groups of people: Those at headquarters in the Enforcement Bureau, and for the Amateur Radio operators."

Before joining the FCC, Hollingsworth, a South Carolina native, graduated from the University of South Carolina and Wake Forest University School of Law. While in high school, he worked as a disc jockey for WRHI, an AM station in Rock Hill, South Carolina. "It's a funny thing," Hollingsworth said. "They once held a beauty pageant in Rock Hill and nobody won!" In the mid-1970s, he was a "Nader's Raider" and worked on brown lung disease in the North and South Carolina textile mills.

"Basically I'm just an ordinary guy caught in the cross-hairs of radio history," Hollingsworth said. "But I am proud of the fact that the digital clock on my VCR has been blinking for 4 years."

Hollingsworth told the ARRL he was "so very impressed" with the young people who are involved with Amateur Radio: "To the very young Amateur Radio operators I have met who have dreams of being scientists and astronauts and communications engineers, we will be pulling for you; I have a strong feeling we won't be disappointed."

Calling the Amateur Radio Service a part of the American heritage, Hollingsworth explained that he is "going to stay as actively involved in it as I possibly can. Thank you all for working tirelessly to provide the only fail safe communications system on Earth and for helping this country keep its lead in science and technology. What an incredible gift it has been to work with you every day, and how fortunate we are to love the magic of radio! Every gift of lasting value comes with responsibility. We must never forget what we owe for our spectrum privileges. I will continue working with you in every way I can to ensure that Amateur Radio lasts a thousand years. "

==> PHILADELPHIA AREA HAMS NAIL ROGUE RADIO SIGNALS

When residents of a Philadelphia suburb complained <http://www.nbc10.com/investigators/16701097/detail.html?dl=mainclick> to an area television station about how their remote car door entry devices wouldn't work in the parking lot of a local department store, an investigative reporter for NBC-10 (WCAU) called everyone she could to help her discover why. No one knew anything -- until she called on some local ham radio operators.

"Many people lock and unlock a car by remote and don't even give it a second thought unless it doesn't work," said NBC10 reporter Lu Ann Cahn. "The mystery problem repeatedly occurs outside the Kohl's store in

Royersford. When I went into Kohl's [to ask about this], they told me they had no idea [about this]."

Cahn said that shoppers told her that this has been going on for more than a year, and that some shoppers don't realize they might have to manually lock their doors: "One woman reported her laptop was stolen from her car after she thought she had locked it."

Shoppers theorized that it was the local power plant causing the interference, but Cahn said that officials at the plant said it wasn't them. Others thought that cellular telephone towers might be the culprit, but there are no cell towers in the area. "Police tell us that they can't figure it out either," Cahn said.

So after calling numerous places to help her out with this mystery, Cahn happened upon Reggie Leister, N3KAS, and Bob Rex, K3DBD, of the Pottstown Area Amateur Radio Club <http://www.paarc.net/>; Rex is Vice President of the club and Leister is the club's Public Information Officer (PIO). And as hams do, they were quick to volunteer to help out.

Leister and Rex accompanied Cahn to the parking lot in question. Rex built an antenna out of aluminum tubing and hooked it up to a spectrum analyzer. "Somewhere in the vicinity of this parking lot," Leister said, "there is a big source of radiation, some sort of signal." When Leister aimed the antenna in the direction of the Kohl's store, he hit pay dirt. "There are actually two signals there. It looks like [they're] coming from the building," Rex said when he read the analyzer.

Leister and Rex moved in closer to the building and pinpointed that one signal was coming from one set of doors, while the other signal emitted from another set of doors. Rex, an engineer, said that the thing that bothers him about this is that the signals "are running constantly." When Cahn approached Kohl's management with their findings, she was told that "they will look into it."

"The FCC licenses radio signals and these ham radio operators say the fact that some signal is interfering with remote locks isn't good," Cahn said in her report. Rex concurred, saying, "The FCC rules are pretty clear on that. It might be something that's broken." Leister and Rex agreed that the store security sensors located at each set of doors might be the culprit.

Three days after Leister and Rex located the source of the interference, remote car door lockers worked again. "Kohl's will only say that they're working on it," Cahn said. "The FCC says it does sound like something malfunctioned and they have had reports of similar incidents in New York City and Tampa, Florida."

A few days after they found the signals, Leister explained that he and Rex did not think the anti-shoplifting detectors were the problem: "What we are guessing here is that they are probably connected to some kind of device that triggers a security camera to come on if there is a breach. Except instead of just sending out a quick 2-5 second (Part 15) blip, these seem to be on continuously and exceeding the permissible signal levels."

Cahn was quick to give on-air credit to the local hams who stepped up to the plate and helped crack this mystery: "We here at NBC10 were so curious as to why these remote car locks would just stop working, so we thought we should really try to solve this mystery. I have to give kudos to Reggie Leister and Bob Rex with the Pottstown Area Amateur Radio Club. They were so great and so excited. You don't know how many people we called -- police, Triple A, car dealerships -- we called so many people trying to figure this out and nobody knew anything until we talked to these ham radio operators. They were so wonderful and they knew all about radio signals. They created their own gadgets to help us figure this out. We really want to thank them for their help with this."

==> GET READY FOR THE IARU HF WORLD CHAMPIONSHIP NEXT WEEKEND

HF Contesting usually hits a dry spell during the summer months, but the weekend of July 12-13 brings a summer bright spot for HF contesters -- the IARU HF World Championship.

According to ARRL Contest Branch Manager Sean Kutzko, KX9X, the IARU contest is a little different from most major HF contests. "For starters, it's only 24 hours long (instead of the normal 48). This leaves you plenty of time over the weekend to have fun in the contest and participate in other activities. Another difference is that you can combine modes. While most HF contests are either CW or SSB, IARU allows you to operate CW, SSB or a mixture of both. Lastly, the IARU contest exchange is a signal report and your ITU zone." ITU zones are different than CQ zones, Kutzko said. For a map of ITU zones, you can visit the IARU Web site <http://www.iaru.org/ituzonesc.gif>.

One of the features of the IARU contest is the highlighting the IARU member Amateur Radio organizations from all around the world. These organizations often participate in the contest with a special call (often ending in "HQ," designating a national headquarters station) and can be worked as special multipliers in the contest. Kutzko said that IARU Administrative Council members from around the world will also be on and can also be worked for special multiplier credit. "If you hear a station giving R1, R2, R3 or AC as their contest exchange, that station represents part of the IARU Administrative Council or regional Executive Committee."

The IARU HF World Championship runs from 1200 UTC Saturday, July 12 to 1200 UTC Sunday, July 13. For complete rules and forms, you can visit the IARU Contest Web page <http://www.iaru.org/contest.html> or the ARRL Contest Web page <http://www.arrl.org/contests>.

==> CHECK OUT THE JULY/AUGUST NCJ

NCJ, The National Contest Journal is what everyone interested in radiosport needs to have in their shack. Filled with the latest news from the contesting world, NCJ is the voice of radiosport. Whether you are new to contesting or are a seasoned pro (or somewhere in the middle), you will find something in NCJ just for you.

In the July/August issue, Paul Mackanos Jr, K2DB, remembers "Remote Operation and Contesting at K2NNY/K2DB." Ed Muns, W0YK, provides "A Contester's View of Visalia," and Tom Taormina, K5RC, looks at "The Next 3 dB." Calvin Darula, K0DXC, gives "A 13-Year-Old's Perspective on Amateur Radio and Contesting."

If you've been waiting to see how you did in the January and February contests, you definitely don't want to miss this issue! Shelby Summerville, K4WW, give readers the rundown on the February 2008 NAQP RTTY Contest. Bruce Horn, WA7BNM, looks at the results of the January 2008 NAQP CW and SSB Contests. Jim Stevens, K4MA, gives his take on the February 2008 North American Phone Sprint and Tree Tyree, N6TR, ponders the February 2008 North American CW Sprint.

Of course, there are all the regular columns and features you expect from NCJ: "Workshop Chronicles," by Don Daso, K4ZA; "Contest Tips, Tricks & Techniques," by Gary Sutcliffe, W9XT; "Propagation," by Carl Luetzelschwab, K9LA; "VHF-UHF Contesting," by Jon Jones, N0JK; "Contesting on a Budget," by Paul Schaffenberger, K5AF; "DX Contest Activity Announcements," by Bill Feidt, NG3K; "RTTY Contesting," by Don Hill, AA5AU; "Contesting 101," by Kirk Pickering, K4RO, and "Contest Calendar," by Bruce Horn, WA7BNM.

All this and more in the July/August issue of NCJ. NCJ is published six times a year by the ARRL; it is edited by Al Dewey, K0AD. Subscribe today <http://www.arrl.org/ncj/>!

==> FCC ENFORCEMENT ACTIONS

Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth sent a Warning Notice to William G. Aber, Sr, N2JAI, of Green Creek, New Jersey, alerting him that "[t]he control operator of the KC2JPP repeater, operating on 449.875 MHz, has requested in writing that [Aber] refrain from use of the repeater." These requests, the Commission, noted, were due to Aber's "failure to follow operational rules set forth by the licensee/control operators of the repeater system for its users." Aber had been issued verbal requests to refrain from using the repeaters in the past, but he has, according to the Warning Notice, "apparently ignored both verbal and written requests."

Saying that Aber refused delivery of the letter from the repeater owners, Hollingsworth reminded Aber of the FCC's rules that require that "repeaters be under the supervision of a control operator and [the FCC] not only expects, but requires, such control operators and licensees to be responsible for the proper operation of the repeater system. Control operators may take whatever steps are appropriate to ensure compliance with the repeater rules, including limiting the repeater use to certain users, converting the repeater to a closed repeater or taking it off the air entirely."

Aber was warned to stay off the KC2JPP system and any other such request by a repeater licensee, control operator or trustee. If he chose to ignore this request, the FCC would initiate enforcement action against his license -- which can include revocation, monetary forfeiture or a "modification proceeding to restrict the frequencies on which [he] may operate N2JAI." Fines normally range from $7500-$10,000.

Hollingsworth also sent a Warning Notice to Gateway Coal Mine in Coulterville, Illinois concerning that company's unlicensed radio operation. Citing a complaint made to the FCC, Hollingsworth stated that "your company has been using unlicensed radio equipment. The frequency is 146.400 MHz and is an Amateur Radio Service frequency, not a business or public safety frequency."

Hollingsworth advised Gateway Coal Mine that operation of radio transmitting equipment without a license is a violation of Section 301 of the Communications Act of 1934, as amended, 47 U.S.C. Section 301 "and will subject you to fine or imprisonment, as well as an in rem seizure [forfeiture of physical assets] of any non-certified radio transmitting equipment, in cooperation with the United States Attorney for your jurisdiction. Monetary forfeitures normally range from $7,500 to $10,000." Hollingsworth recommended that Gateway Coal Mine contact their radio service technician in order to correct the situation.

Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to the FCC Spectrum Enforcement Division <fccham@fcc.gov>.

==>SOLAR UPDATE

Tad "I am too much in the Sun" Cook, K7RA, this week reports: The weeks seem to drag on with no sunspots in sight. An image from helioseismic holography on Tuesday shows a spot on our Sun's far side. We hope it emerges in a week or 10 days on our side and hasn't died out by then. Spots emerge from time to time, but they are all old Solar Cycle 23 spots and they seem to fade quickly without much activity. Sunspot numbers for June 26-July 2 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 65.4, 66.1, 65.9, 66.6, 66.7, 65.6 and 65.9 with a mean of 66. Estimated planetary A indices were 16, 8, 7, 8, 6, 5 and 3 with a mean of 7.6. Estimated mid-latitude A indices were 17, 7, 6, 7, 5, 4 and 1 with a mean of 6.7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the Digital Pentathlon is on July 4 and the MI QRP July 4th CW Sprint is July 4-5. The VK/Trans-Tasman 160 Meter Contest (Phone) is July 5. On July 5-6, be

sure to check out the Venezuelan Independence Day Contest, the WLOTA Contest, the DL-DX RTTY Contest, the Original QRP Contest and the PODXS 070 Club 40 Meter Firecracker Sprint. The DARC 10 Meter Digital Contest is July 6 and the RSGB 80 Meter Club Championship (CW) is July 7. Next weekend, the NCCC Sprint Ladder is July 11 and the FISTS Summer Sprint is July 12. The IARU HF World Championship is July 13, as are the SKCC Weekend Sprintathon and the ARCI Summer Homebrew Sprint. The RSGB 80 Meter Club Championship (SSB) is July 16 and the NAQCC Straight Key/Bug Sprint is July 17. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, July 6, 2008 for these online course sessions beginning on Friday, July 18, 2008: Amateur Radio Emergency Communications Level 2 (EC-002), Amateur Radio Emergency Communications Level 3 (EC-003R2), Antenna Modeling (EC-004), HF Digital Communications (EC-005), VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the Continuing Education course listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL to Close in Observance of Fourth of July: ARRL Headquarters will be closed in observance of Independence Day on Friday, July 4. There will be no W1AW bulletin or code practice transmissions that day. The ARRL Letter and ARRL Audio News will be posted a day early on Thursday, July 3. League Headquarters will reopen Monday, July 7 at 8 AM Eastern Daylight Time. We wish everyone a safe and festive holiday weekend.

* ARRL Audio News Returns to Phone Lines: We are pleased to report that ARRL Audio News can once again be accessed via telephone at 860-594-0384; it had been down for a few days due to equipment failure. Compiled and edited from The ARRL Letter, ARRL Audio News is available on the League's Web site for two weeks and via telephone for one week after publication. We are sorry for any inconvenience the outage may have caused

* USI to Host Special Event Stations: The United States Islands (USI) awards program will host a series of special event stations -- including

their main club station KL7USI -- from all over the US, Alaska and the Yukon celebrating 15 years on HF. Starting summer 2008 throughout 2009, look for USI activities on 14.260 MHz and other bands. USI is the premiere state island collecting program. Check USI website for further details <http://www.usislands.org>.

* ARRL Contest Update Offers Valuable Information for All: Every two weeks, H. Ward Silver, N0AX, produces the ARRL Contest Update. Each issue is jam-packed with information for all operators, be they involved in radiosport or not, such as operating and technical tips, propagation information and a focus on a technical Web site each issue. Of course, everything you need to know about upcoming contests is right there at your fingertips. Since the ARRL Contest Update is available in HTML, there is a link to the rules for each individual contest listed, as well as pictures. ARRL members can subscribe the ARRL Contest Update on the ARRL Web site <http://www.arrl.org/contests/update/about.html#get>.

==

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including

delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Ain't it amazing how 10 and 15 meters are "open" when people get on
the air? I was working lots of short skip (sporadic E?) on both bands.

I think you're working from a very early table. I count 137 stations currently licensed to operate DTV stations on these channels. Those are

interim operations. Another 300 or so stations will be moving their DTV
operations to 7-13 from other channels, usually UHF.

Here in Arizona, there are very few
> remaining after the transition. The public safety folks,
> having failed to take any of the 138-174 spectrum from the

> Huachuca) are now looking at the possibility of getting some
> of that 174-216. I doubt that it will happen though.

I count eight. There are nine analog stations currently operating in that
spectrum in the state.

To pick two more states more or less at random:

Kansas: 11 analog stations in 7-13 today.
         2 interim DTV operations in 7-13 today.
        13 permanent DTV operations in 7-13 after transition.

Pennsylvania:
         7 analog stations in 7-13 today.
         4 interim DTV operations in 7-13 today.
         9 permanent DTV operations in 7-13 after transition.

Well, here in Southern California (Los Angeles + San Diego), each of 7-13 is
actually occupied with a full-power TV station and will continue to be. The
odd channels are for LA and the evens for SD (12 for Tijuana, Mexico).

The best grab we could hope for is perhaps "Channel 2" - at 54-60 MHz and
being adjacent to our 6 meter band.

If there are a dozen repeaters with zero activity, most will go dead in any disaster because it takes real human interest and work to provide emergency power. I'd rather have two or three solid repeaters than a dozen where the maintenance is hit-and-miss and there's no one who really cares whether they are up or not.

There must be a compromise between these two opinions. There cannot be
108 active repeaters in one urban area. Frequency coordinators need a
way to reassign pairs that really are no longer being used.

>

Hi again Mark,

Certainly there are places where there or only "one or two repeaters", but my hypothetical example was built from my own local area where there are 108 pairs assigned. If my PBI were implemented and the Repeater Council could harvest the arbitrary 10% I mentioned, then there'd still be 97 legacy machines to choose from, and 11 pairs opened for emerging technologies.

QSL?

Hence, HF. You might hear more local activity on 10m. 80 or 40m during daylight hours should also be good for local/regional activity.

Mr. Bryan,

I have neither the room in my car for my IC-735, nor the willingness to put up a 4BTV on my car's plastic bumper. (You'll find them in the back by the shipping area.)

Fugetaboutit!

K0CKB and I travel many thousands of miles a year in a coach with "K0HB & K0CKB monitoring 146.52" prominently displayed on the back.

We also frequently announce our presence on .52. In the past 5 years we've had precisely 2 QSO's on .52 as a result.

Don't bother.

Thanks, Hans. That'll save me from making a bunch of unnecessary holes in my nice car.... and the price of a fancy new repeater directory. *sigh* I'll wait until I get to 1-land and get to know my new neighbors.

One of the several radio clubs which I am a member of maintains a rather extensive UHF repeater system which usually sits silent except for about a half-dozen of us during commute hours or when we are doing some exercise like Field Day. If this was to "go away" (fat chance of that, knowing the reality of the situation and the folks involved) the local medical center where I am the Disaster Communications Team co-manager would be without required ham radio backup. We went to that arrangement when we found out in a real disaster last December that the local ARES groups could not accommodate the type of traffic that we needed because of their own overloads.

Consider the trap that the FCC's first-generation automated Spectrum Management System fell into some 30+ years ago. It sat on Fire Radio Service frequencies and reported no activity. Of course not - if there are no fires there is no radio traffic, and the vast majority of fire radio activity is with 5-watt on-scene HTs. Similarly, it reported almost no Railroad Radio Service traffic in New York City - where the monitoring was done during daytime and the bulk of freight movements are at night. And to cap it off, it reported continuous occupancy of a lot of channels in Chicago 24/7, until one of the old hands at the Field Office listened and found out that it was a defective electrical device throwing RFI into the air.

You assume that those repeaters do not have backup power. I found that this was not the case in the ham communities of San Francisco and Portland (OR) areas, the two places that I have had extensive experience with VHF/UHF repeaters. Backup power is relatively easy to get at those sites where ham and commercial facilities are co-located, which are most of the places where the ham repeaters are.

Similarly, you assume that because a repeater is silent that "the maintenance is hit-and-miss and there's no one who really cares whether they are up or not". Again, my experience does not bear this out. Most of the repeaters that are reported "silent" are because they are kept alive by a small group of people whose activity is not always observed by the casual ham. I'm the trustee of two club repeaters maintained by one of the other members who is a 2-way radio tech. Our 2 meter machine is used all the time by ham-licensed truckers driving up and down the Interstate. The other is used only by the few club members who have the 223 MHz band in their radios. The casual listener would consider that one "unused", which is not the case.

Similarly, during the many hours each day that I spend in my Comm Center at home - a cross between a home office, a library, and a ham shack - I maintain a speaker watch on the UHF repeater that my other local club uses for commute-hour rag chews and is available for use for hospital disaster communications. Except for the commute hours, it is "silent" but I'm there to answer any calls and to join in the rag chews. That seems to be the norm for the "silent" repeaters in this "no pairs available" area. We do have several where there's pretty frequent use, though.

Repeater-based ham radio is alive and well in Webfoot Country.

The last time I tried to have a QSO on .52 the other guy didn't have a radio in his car. Hard to communicate that way.

Did you mean 3965kHz? There is no scheduled DRM transmission on
3865kHz. On 3965, Radio France has a 1kW DRM transmission from
Issoudun targetting France on all day except 1800-1900 and 2000-2200
UTC. I'm amazed that you find it so strong across the Atlantic.

Tom

Hans, reminds me of a story about a person I knew complaining
that he called several times and I didn't answer (the cell
phone.) I just looked at him and said, "I know. That's why I
have caller ID."

Do I need to put a smiley face here so every ones I'm just
teasing Hans a teensie bit?

```

I am assuming that a repeater with ZERO activity is a repeater with no one who cares about it. In one of your previous posts you mentioned a repeater in your area which is "only" used during commute times and FD; this is not zero activity and indicates that there is a core group of people who care about the repeater.

The kind of repeater I'm talking about is one that might have been quite active a decade ago, but has been running on inertia for several years. Maybe it still responds to a signal on the input frequency, but the chance of it having usable backup power is extremely low. Another issue is potential damage during the disaster; if there is not a group of people who use the repeater, no one will be there to make the perhaps-trivial repairs necessary to get it back on the air.

> Similarly, you assume that because a repeater is silent that "the maintenance is hit-and-miss and there's no one who really cares whether they are up or not". Again, my experience does not bear this out. Most of the repeaters that are reported "silent" are because they are kept alive by a small group of people whose activity is not always observed by the casual ham. I'm the trustee of two club repeaters maintained by one of the other members who is a 2-way radio tech. Our 2 meter machine is used all the time by ham-licensed truckers driving up and down the Interstate. The other is used only by the few club members who have the 223 MHz band in their radios. The casual listener would consider that one "unused", which is not the case.

The key word in your sentence is "used". "Zero activity" is incompatible with "used".

I said, "I'd rather have two or three solid repeaters than a dozen where the maintenance is hit-and-miss and there's no one who really cares whether they are up or not." I did not imply that if a repeater is silent that the maintenance is hit-and-miss. What I said is that if there is not a group of people who care about the repeater, it's likely to be useless in a disaster, and I stand by that statement.

> Similarly, during the many hours each day that I spend in my Comm Center at home - a cross between a home office, a library, and a ham shack - I maintain a speaker watch on the UHF repeater that my other local club uses for commute-hour rag chews and is available for use for hospital disaster communications. Except for the commute hours, it is "silent" but I'm there to answer any calls and to join in the rag chews. That seems to be the norm for the "silent" repeaters in this "no pairs available" area. We do have several where there's pretty frequent use, though.

Any repeater that has a regular group that uses it during commute does not fall under the category of "zero activity", and obviously there is a group of people who care about it.

> Repeater-based ham radio is alive and well in Webfoot Country.

Good. I think that perhaps you misinterpreted my initial comment to be that a repeater needs to have constant activity to be viable, and that's not what I was trying to say. I do stand by my initial statement that, given the choice of a dozen zero-use repeaters or a couple of busy ones, I'll take the lower number of busy ones because they will be more likely to survive a disaster.

And again let me point out the difference between urban and rural environments. The simple fact that you have a higher population density almost guarantees that you have more people using the repeater(s). Of course, if you have many repeaters, the person-per-repeater number may be as low as ours.

Our situation here in rural Minnesota is rather marginal. We do have a local club with a core group of people who care enough about the repeater to keep it going. On the other hand, our UHF repeater has been down for almost a year now, and somehow the group has not been able to get it back on the air, primarily because one person has promised to provide a new site for the repeater and has not followed through on that commitment.

We had an actual disaster a few months ago, not in this immediate area but in rural Minnesota. There was a need for ham radio communications because the incident was "down in a hole" where cellphones wouldn't work. (Floods often happen in river valleys.) The response was not what it should have been. Part of this is due to the low number of hams, and part is due to the lack of organization.

I'm not sure that the idea of getting rid of analog repeaters so that D-Star repeaters can be given those frequencies is really going to do much. If your area has 108 repeater pairs coordinated, and no activity, I suspect that a D-Star repeater will be likewise not have much activity. At this time you would probably just have one more repeater that isn't used.

Your area's problem is lack of interest, not too many repeaters. My point is if Hams start using the repeaters, they might bootstrap interest.

After interest is generated, then the possible next conversation might be "Hey, we have that old repeater on the south side of town, maybe a group of us can get together and go digital....

Condensing that, could we say "You guys can't have a pair for your newfangled technology until you busy up all the silent analog repeaters." ?

Respectfully no. my lack of communication skills is showing sorely.

What I am saying is that if the sum total of communications is Zero, no one will use a new repeater, D-Star or analog.

Further, I am saying that if no one is interested, who among the disinterested is going to put up that repeater?

Finally, if interest is generated, perhaps some of the interested will remove that unused analog repeater, and put a digital one in it's place.

Or the condensed version:

An unused digital repeater sounds the same as an unused analog one. ;^)

>> Similarly, you assume that because a repeater is silent that "the
>> maintenance is hit-and-miss and there's no one who really cares
>> whether they are up or not". Again, my experience does not bear this

>> out.

Ditto.

>The key word in your sentence is "used". "Zero activity" is
>incompatible with "used".

Unless you monitor a frequency 24/7/365, it is impossible to claim
"zero use". When most people say "zero use", they mean "I never hear
anything on it". There is a BIG difference.

>I did not imply that if a repeater is
>silent that the maintenance is hit-and-miss.

"I am assuming that a repeater with ZERO activity is a repeater with
no one who cares about it." Define the difference between "silent" and
"zero activity".

>What I said is that if
>there is not a group of people who care about the repeater, it's likely
>to be useless in a disaster, and I stand by that statement.

I wasn't talking about a place where there are only one or two repeaters.
I was talking about a place where there are a large number of repeaters,
but only one or two have a lot of activity. If you want to got through
and shut down the "inactive" repeaters so you can harvest the assigned
pairs, then you will wind up with not enough infrastructure when it is
really needed.

>If my PBI were implemented and the Repeater Council could
>harvest the
>arbitrary 10% I mentioned, then there'd still be 97 legacy machines to choose
>from, and 11 pairs opened for emerging technologies.

If there are 10% of those pairs truly unused, there doesn't need to be any
harvesting. Just use them. Who will you be interfering with?

>QSL?

I verify this conversation took place.

No, we could say "who are you interfering with if you put your newfangled
technology on a pair where there is no repeater active?"

How did we ever have repeaters before coordinating agencies were formed?

The tone of this (and other) responses seems to suggest "just stroke up on a convenient pair, and wait to see if the coordinated person/club complains".

If I lived in Resume Speed, Montana that might work, at least for awhile, if I had the bad manners and grapes to try. But if you commandeer a pair in an already wait-listed/saturated environment, you can kiss off EVER getting a coordinated pair (and for good reason).

It would be far easier to connect a voice-activated tape recorder (like a Sony TCM-37V recording walkman) to a scanner that was set to scan just the frequencies that are suspected of being dead. Then, you could document your results when claiming that the frequencies should be reassigned.

No, that is not what was said at all. That is not the tone of what was said, nor was it said directly.

If you know a pair where there is no active repeater, you are not just "stok[ing] up on a convenient pair", you've picked the pair with an explicit reason. If a coordinated user complains that you are interfering with a repeater that does not exist, you are free to laugh at him. Tell me, just how DO you interfere with a non-existant system? Do you think the FCC is going to listen to him?

>If I lived in Resume Speed, Montana that might work, at least for awhile, if I
>had the bad manners and grapes to try.

You think it is bad manners to use a frequency that is not being used? You only join conversations already in progress? You never make a call on an unused frequency?

>But if you commandeer a pair in an
>already wait-listed/saturated environment,

The the pair is wait-listed and saturated, then it isn't unused, now is it?

Gentlemen;

The point to remember is that NO repeat NO one has a right to any particular radio frequency. Even coordination does not grand any right to a particular radio frequency, only license to use the frequency.

The repeater coordinator has a responsibility to insure that an applicant really does intend to utilize the assigned radio frequency. If the applicant does not do so after a reasonable time then the coordination is or should be null and void. No, I am not going to define reasonable.

It's like cell phone companies getting assignment to a block of 10,000 numbers and not using them causing the creation of a new area code to free up new numbers. The FCC, I believe, has baned this practice.

Repeater Coordinators have a responsibility to allocate an extremely scarce resource in a fair and reasonable manner. Those who get a coordination just to have one and don't place equipment on the air, even if they use it in a limited manner, do not deserve to retain the coordination and the frequency should go to a new applicant.

Remember the FCC gives precedence to a valid coordinated applicant over a claim jumper. But the coordinated applicant must be using the coordination. Maybe applicants should report back to the coordinator when the repeater is placed into service and when it is removed from service for reasons other than routine maintenance to include damage due to natural causes. This will keep applicants on their toes to keep their repeater on the air and active.

97.205(c).Where the transmissions of a repeater cause harmful interference to another repeater, the two station licensees are equally and fully responsible for resolving the interference unless the operation of one station is recommended by a frequency coordinator and the operation of the other station is not. In that case, the licensee of the noncoordinated repeater has primary responsibility to resolve the interference.

So does 97.205(c) give the licensee of the coordinated repeater any rights? Seems to me that it does.

We can go on and on with "could of" and "should of", and with discussion of what "harmful interference" means. The bottom line is that frequency coordination is recognized in the regulations and thus it's not a prudent idea to simply ignore it and pick a pair for your new repeater.

Your actual words in <g2jrrg$1tf$1@vulture.killfile.org> were "Ummm,
they already have it. If the pair really is unused, who is going to tell
you to stop using it?". That looks exactly like, "Ummm, they already
have it. If the pair really is unused, who is going to tell you to stop
using it?"

> If you know a pair where there is no active repeater, you are not just
> "stok[ing] up on a convenient pair", you've picked the pair with an

How is this different than picking a pair where there's an active
repeater, or a repeater that is temporarily down? It's not your
prerogative to "pick a pair", just because you think it's unused.
That's what frequency coordination is for, and the reason it exists. Of
course you have an "explicit reason"; that doesn't give you the right to
ignore the law. And yes, it is "the law".

> If a coordinated user complains that you are interfering
> with a repeater that does not exist, you are free to laugh at him. Tell
> me, just how DO you interfere with a non-existant system? Do you think
> the FCC is going to listen to him?

Yes, the FCC is going to listen to him, because he has the right to use
that pair, while you do not. The FCC does recognize the work of
frequency coordinators.

>> If I lived in Resume Speed, Montana that might work, at least for awhi
le, if I

You just don't understand the concept of formal frequency coordination,
do you?

>> But if you commandeer a pair in an
>> already wait-listed/saturated environment,
>
> The the pair is wait-listed and saturated, then it isn't unused, now is
 it?

I am sure that in many areas there are repeater pairs that, in your
eyes, would appear unused. It is the charter of the frequency
coordinator to make that determination, not each individual ham.

It's too bad that we need formal frequency coordination and can't go
with the concept of "no one owns any frequency". Experience has shown
that the formality is needed in this case, and I your explanation of how
you could just jump in and squat on any repeater pair because you want
it is a fine illustration of how we got to this point.

73, Steve KB9X

Could you please remind us where the work of the frequency coordinator is enshrined in law?

Sure there is a legal duty not to cause interference, but as the OP said it is not possible to interfere with a non-existent system.

Jeff

I used to be involved in packet radio coordination, a subset of frequency coordination. As I explained to people, "If you're not getting any death threats, you're not doing your job."

On frequency coordinators. They are necessary because people have shown repeatedly that they can not all work together. From the very beginnings in the early '70s out here in Los Angeles people have shown a propensity for acting like fools.

Not that the frequency coordinators "do it right" all the time. Notably the 220 disaster. How do you reallocate all the repeaters when you lose a big chunk of spectrum? Easy, You tell everyone at the low end of the band, "You lose." That actually required the FCC to step in and force band plans on the coordinators.

The bottom line, frequency coordination is necessary. As they say, "Good fences make good neighbors."

Try going without one. Who wins the frequency? the one with th e strongest signal, I suppose.

> Sure there is a legal duty not to cause interference, but as the OP said it
> is not possible to interfere with a non-existent system.

Squatting is just bad manners, and not terribly civilized. Hams are supposed to be civilized. Let's say that you put up an uncoordinated repeater on a frequency that someone else has coordinated. Then le't suppose another uncoordinated repeater goes up on the frequency you picked. Who controls that frequency? You or the second squatter? Who moves?

I looked up the repeater coordination in Hans' area. Although I didn't come up with 108 allocations, I might not be using the same total area he is. I used Minneapolis/St Paul, and came up with a hundred - 76 in Minneapolis and 24 in St Paul. Fairly close at any rate.

On Artscipub.com, they have listed 21 repeaters for Minneapolis, and 1 for St Paul.

Note that 3 of those are in the 6 meter band, and 4 are on 222 MHz band.

That leaves us with 8 on 144 MHz and 7 on 440 MHz. Less than 10 percent utilization.

There is no reason that application can not be made to acquire one of those unused pairs. I don't know if it is universal, but in at least some repeater councils, after 6 months of no use, and no extenuating circumstances, a repeater pair can come up for re-coordination.

But looking at the disparity between the assigned numbers, the repeaters in use, and what Hans has to say about the situation, adding a new repeater is not going to cure what appears to be a severe lack of interest in V/UHF repeater use in his area. Seriously, that needs fixed first.

Has anyone tried re-coordination, Hans?

David G. Nagel <nagel.david@sbcglobal.net> wrote:
>The point to remember is that NO repeat NO one has a right to any
>particular radio frequency. Even coordination does not grand any right

>to a particular radio frequency, only license to use the frequency.

Umm, no, the FCC grants the license, not the coordinating body.

The coordinating body picks who gets preference when there is an interfering use.

If there is no interference, coordination doesn't come into play.

If I use the output frequency of the local repeater in simple mode, I am not interfering with that repeater. The repeater won't even know I am there. The users of the repeater who can't hear me won't know. The users who do hear me hear nothing different than if I was using it. If someone keys up the repeater on top of me, they interfere with me, but that's life. If they are coordinated and I am not, I have to put up with them. If they are not coordinated, we have to work to solve the problem.

>Repeater Coordinators have a responsibility to allocate an extremely scarce resource in a fair and reasonable manner. Those who get a coordination just to have one and don't place equipment on the air, even if they use it in a limited manner, do not deserve to retain the coordination and the frequency should go to a new applicant.

Of course.

What, exactly, is the signal strength coming from a repeater that does not
exist? I suspect 0 is a correct answer.

>> Sure there is a legal duty not to cause interference, but as the OP said it

Using an unused frequency is not squatting. It's done every day.

>Hams are
>supposed to be civilized. Let's say that you put up an uncoordinated

Ok. He's the coordinted user, but hasn't installed any hardware in the three
years that he's had that coordination. That frequency pair is coordinated
but unused.

>Then le't
>suppose another uncoordinated repeater goes up on the frequency you
>picked.

Ok. Someone else puts up a repeater on the frequency you put yours on. Good so far.

>Who controls that frequency? You or the second squatter? Who moves?

Nobody controls it. The law says that you are both responsible for solving the interference issues. Nobody has to move. You might solve it by putting different tones on the inputs. You might solve it by lowering power, or in any number of other ways. But nobody "controls" the frequency. You are both on the hook. That's part of the privilege of being able to select one's operating frequency.

>On Artscipub.com, they have listed 21 repeaters for Minneapolis, and 1
>for St Paul.

Repeater directories are really good for telling you where the repeater is, but notoriously bad for telling you what they cover. To know a pair is unused, you need much more than a repeater directory.

How do you know they are unused? In my state, you ask for a pair but you don't ask for a specific one. They tell you what you get.

>I don't know if it is universal, but in at least
>some repeater councils, after 6 months of no use, and no extenuating

So the coordinators have a means of reallocating unused pairs.

The pairs are all assigned, Mike, or are assigned in other nearby areas too close for geographical sharing.

If you must check my numbers (why would I make something up?) the official coordinated list is at http://www.mrc.gen.mn.us/MN_List.pdf ... scroll down to about page 10 under the heading <<METRO>>

Now where did I lay my Skimmer......

Sheeeeeesh!

The notion I advanced wasn't an arbitrary and heavy-handed "mass extinction", but a deliberate cooperative "needs assessment" process. Here is what I suggested:

> Since this thread is about the "5th Pillar" of ARRL emphasis, "technology", perhaps ARRL and NFCC could jointly sponsor a Skimmer-like technology initiative which would put up a broadband receiver on a local highrise (we're in flatland country out here) and count squelch-tails per QRG for three months. Then approach the low 10% and suggest they might reconsider their needs. Especially those clubs who sponsor multiple quiet repeaters all covering an identical footprint.

An obvious part of that needs assessment process would be to identify (and protect) critical infrastructure. The desired end result (not well stated, perhaps), would be a small pool of QRGs set aside as an "emerging technology corridor" (DStar mentioned only as an example) where tinkering and experimentation were encouraged.

Mike suggests that there would be very few users of such a "technology reservation". That's almost certainly true, but I don't think that makes it a "bad thing". It's no secret that homebrewing and "radio for the sake of advancing the art of radio" (in Mikes terms "technology for it's own sake") is a minority share of our hobby. But I think that it's an important minority, critical to our future, and that we can afford to set aside "incubation spectrum" to nurture it.

I spent a good chunk of my career gathering info on use (and non-use)
of radio channels as evidence.  It is easy to show something is used -
play the tape / show the printout.  Showing that a channel is not used
is quite a bit more difficult - is the blank tape real or a sham?

We're going through that right now in a commercial channel reclamation
proceeding before the FCC where it's our word against theirs.

>going to tell you to stop using it?

That is not what K0HB wrote. In <VfOdnc0nKN_1FNDVnZ2dnUVZ_vKdnZ2d@earthlink.com> what he actually said was:

]The tone of this (and other) responses seems to suggest "just stroke up on a
]convenient pair, and wait to see if the coordinated person/club complains".

That is also what appears in the article you replied to.

What YOU claim he wrote was something I wrote in a different sub-thread. Yes, when what he actually wrote is replaced with something I wrote, then what I wrote will look exactly like what you claim he said.

So, when I wrote:
>> No, that is not what was said at all. That is not the tone of what was
>> said, nor was it said directly.

I was replying to the actual statement made by K0HB. I did not say "convenient", nor "just stroke up", nor "wait to see" if anyone complains. I said that there WILL be nobody to complain about the use of an unused coordinated pair, because there will be no interference to complain about.

A coordination owner can complain that someone is using "his" frequency, but all I have to do is ask what interference I am causing. And then I'll ask him what rule makes that "his" frequency. When he answers "none" and "none", the complaint will have been dealt with.

>> If you know a pair where there is no active repeater, you are not just
>> "stok[ing] up on a convenient pair", you've picked the pair with an
>> explicit reason.
>
>How is this different than picking a pair where there's an active
>repeater, or a repeater that is temporarily down?

An unused pair is one where there IS NO REPEATER. That's how it's different. A pair with an active repeater on it is not unused. I've said that before.

>It's not your
>prerogative to "pick a pair", just because you think it's unused.

First of all, I did not say "because I think it's unused". I said a known, unused pair. That's not "think", that's KNOW. There is a difference.

Second, yes, the FCC gives ALL of us the prerogative of picking the frequency we operate on. With the restriction that I may not cause malicious or deliberate interference to another operator, and must operate within the CFR allocations, I am free to pick any frequency I wish, just as you are. Since I cannot possibly cause any kind of interference to a repeater that does not exist, I have met the limitation of "no malicious or deliberate". Since there is no repeater to interfere with, there is no action I am required to take under the section that deals with coordination, since the only required act is for the uncoordinated operator to solve any interference issues. There are none to solve.

If you think there is a rule that says I don't get to pick my own frequency to operate on, other than the limits I've already mentioned, please quote it. The one about coordination isn't it.

>That's what frequency coordination is for, and the reason it exists.

No. Frequency coordination is intended to mitigate interference issues. It can't solve them (because they sometimes create the problem themselves by coordinating two systems on the same pair too close together -- even professional coordinators sometimes do that.) They are there to identify the station who must act to solve interference issues. They do not grant exclusive rights to a frequency. They cannot. The rules do not allow it, and every 605 contains a statement that nobody owns a frequency. That applies to repeater ops, too.

>Of
>course you have an "explicit reason"; that doesn't give you the right to
>ignore the law. And yes, it is "the law".

Please quote the law that says I may not use an unused repeater pair. I cannot ignore a law that does not exist. In the meantime, I am obeying the "uncoordinated must solve interference" law fully, in both spirit and letter. I am ignoring or breaking no law.

>Yes, the FCC is going to listen to him, because he has the right to use
>that pair, while you do not.

Please quote the law that says THAT.

>You just don't understand the concept of formal frequency coordination,
>do you?

Yes, I do, and that insult was unwarranted.

>I am sure that in many areas there are repeater pairs that, in your
>eyes, would appear unused. It is the charter of the frequency
>coordinator to make that determination, not each individual ham.

I said "known unused". I did not say "in my eyes appears".

>It's too bad that we need formal frequency coordination and can't go
>with the concept of "no one owns any frequency". Experience has shown
>that the formality is needed in this case, and I your explanation of how
>you could just jump in and squat on any repeater pair because you want
>it is a fine illustration of how we got to this point.

This paragraph is a deliberate insult. I have never caused interference to a coordinated (or uncoordinated) system, and never plan to, despite your implication.

"This case" is not about the need for coordination because it is not about interference. It is about the use of an UNUSED pair without coordination. Since there is nobody using the pair, there is nothing to interfere with. Since there is no interference, the law dealing with who has to solve interference issues is moot. Even were the law to say that the uncoordinated use must change frequency (which it does not) there is no interference issue to force a change.

In Feb 2009, all TVs will become digital. As a result, analog TV
spectrum will become available.

It will be auctioned off. Chances are it will go to big companies,
making their monopoly even bigger. These frequencies would be better
used if it went to amateur radio, public non-license radio (like FRS
and CB is now), and small business (such as letting small business
offer commercial radio services).

Alot of innovative applications will result. And it will create jobs
and new businesses that would otherwise not exist. Also, it would
increase public interest and involvement.

If we do nothing, these frequencies will be lost. Lets lobby now.

You're about 4 years too late. The original date for the analog broadcast
TV shutdown was in 2006 - so the auctions were actually held before then.
However, Congress extended the date because few people even knew of it.

I went looking for discussion on what is likely to happen. Ivor points out that it will be 2012 before the change is made in the UK, yet the first article I found is from the UK. Apparently they're actually thinking about this, studying it, and examining what the best use would be for the resources. (See http://preview.tinyurl.com/3p3uvo)

US organizations are, too. At http://www.afterdawn.com/news/archive/10349.cfm I found this quote: Advocacy groups such as Public Knowledge and Consumers Union say the auction represents the best and last opportunity for large portions of the U.S. to have a third broadband provider that competes with the cable and telecom giants. These groups are asking the FCC to require that part of the auctioned spectrum be sold with so-called open-access rules attached, meaning the winner of the auction would have to sell wholesale access to the network to any company that wants it.

> These frequencies would be better
> used if it went to amateur radio, public non-license radio (like FRS
> and CB is now), and small business (such as letting small business
> offer commercial radio services).

Apparently 24 MHz of the available 84 MHz has already been earmarked for public safety. Is the current allocation of two-way public non-license or amateur-radio-license spectrum sufficiently saturated to justify additional allocation? Personally I don't think so, but maybe in urban areas things are different.

> Alot of innovative applications will result. And it will create jobs
> and new businesses that would otherwise not exist. Also, it would
> increase public interest and involvement.

What innovative applications would you anticipate? I don't see either commercial or amateur radio services expanding just because they have additional spectrum. Where's the demand? Who is going to buy radio service when they already have a cell phone in their hand?

> If we do nothing, these frequencies will be lost. Lets lobby now.

It's probably too late to do any effective lobbying on this issue. But the frequency spectrum won't be "lost"; it will be used somehow. The question is whether it will be used in the "best way".

Problem is, different people have different ideas of what the "best way" might be. I don't envy the FCC the policy task of walking the tightrope between letting market forces decide and placing curbs in place to prevent "big money" from becoming "bigger money".

73, Steve KB9X

This spectrum has already been sold. Except for the 24MHz worth that's
being reserved for public-safety communications.

Some of the new uses have already been implemented. For example,
Verizon's "V-Cast" (video broadcasts to mobile phones) uses the spectrum
formerly occupied by TV channel 55. A number of TV stations have already
closed their analog operations on this channel and adjacent channel 56.

Amateur Radio Newsline(tm) Report 1609 - June 13, 2008

The following is a closed circuit announcement and not necessarily for air. Hers amateur Radio Newsline's Support Fund administrator, Andy Jaremaa, N6TCQ:

--

We know you prefer to hear the news rather than having to listen to these announcements and we agree. But over the past few months almost all donations have ceased so here we our with our annual spring pitch.

As we have said so many times before, it takes money to gather the news. It takes money to assemble a newscast and it takes money to bring it to you. And as the price of goods and services continue to increase so do our operating costs. The cost of telephone service. The cost of web access.

We do our very best to keep operating expenses to a minimum. Everyone involved in the Amateur Radio Newsline is a volunteer. There is no paid staff. More important, all of the monies you donate go only toward operating expenses and in supporting the Young Ham of the Year Award. And for you, your donation is tax deductible.

We even make it very easy to donate. If you have web access all you need to do is take your web browser to www dot arnewsline dot org. Then click on the words "Make A donation" and use your Pay-Pal account or credit card to transfer into ours.

Or you can use the good old method of writing a check and sending it to Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Either way, we thank you for your kindness. For your support and for your trust.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1609 with a release date of Friday, June 13th, 2008 to follow in 5-4-3-2-1.

The following is a QST. Amateur radio responds as savage weather hits the Mid Western states, the BPL fight continues in South Africa, the FCC reminds us that its O-K to record ham radio and C-B transmissions and hams in the Big Apple are again the communicators for the city's Salute To Israel parade. Find out the details on Amateur Radio Newsline(tm) report number 1609 coming your way right now.

RESCUE RADIO: HAM RADIO RESPONDS TO MIDWEST STORMS

Ham radio was among the first responders as severe weather battered the mid Western United States starting on June 4th. Amateur Radio Newsline's Jack Parker, W8ISH, is in Indianapolis, Indiana, which is one of the states hard hit by Mother Natures fury:

--

From Indianapolis, south to the Kentucky line Indiana residents have been surrounded by fast rising flood waters this past week. Torrential rains from slow moving storms dumped up to 11 inches of water on Hoosier communities across the southern part of Indiana.

Dozens of Amateur Radio operators were activated in response to calls from various county emergency operations centers. Rising waters have closed many county roads across the region.

In Johnson County, just south of Indianapolis, amateur radio operators were asked to report closed roads and bridges damaged by fast moving water. A total of eight bridges were severely damaged and one dam was breached forcing evacuations from a small lake community. By noon Saturday most major highways and county roads were closed due to waist high water. Water rescue units sent to evacuate neighborhoods had a hard time getting equipment to those in need.

Hams in Columbus and Seymour, Indiana provided communications to evacuation shelters. Several times they had to tear down and re-locate as those shelters were closed and moved to higher ground. The rain just kept coming. By Monday weary amateur radio operators were calling for relief as more shelters were opened or continued to operate.

It has been a busy month for Indiana ham radio operators. A week before the floods many of the same areas were raked by devastating tornadoes. Again, Amateur Radio communications was put to the test while providing emergency communications to area shelters and emergency management agencies across the state.

Rescue operations became so numerous local fire departments, the Department of Natural Resources and the Indiana National Guard were swamped with requests. The US Coast Guard dispatched rescue helicopters from Chicago while a contingency of US Marines located at Camp Atterbury near Columbus, Indiana postponed their training mission and began assisting with water rescues in Morgan County. The Marines are from Camp LeJune in North Carolina. They too fell victim to the tornadoes and local flooding. Their large Chinook helicopters flew search and rescue missions for several affected counties.

According to the National Weather Service records this is the worst flooding Indiana has seen since 1913. And it may not be over yet. All those flood waters are now flowing down stream causing new problems to Southern Indiana communities.

Reporting for Amateur Radio Newsline, this is Jack Parker W8ISH.

--

We will have more on this story in upcoming Amateur Radio Newsline reports. (ARNewsline(tm), W8ISH)

**

RESCUE RADIO: RACES ASSITS IN NJ ANIMAL RESCUE DRILL

Emergency service workers handling large animals during an a disaster. That was the theme of a preparedness drill in central New Jersey on Sunday afternoon June 8th. One that involved not only horses, ponies, goats, alpacas, donkey and young cow, but ham radio operators as well.

The exercise consisted of evacuating and registering the animals in a shelter set up at the Hunterdon County Fairgrounds. About 40 volunteer members of a local County Animal Rescue Team took part. Communications for the operation was provided by members of the County's Radio Amateur Civil Emergency Service group

The scenario for the exercise was the imaginary collision of a car with a train at the crossroads in Franklin Township. The accident supposedly caused the train carrying hydrochloric acid to derail with the toxic acid leaking out and leading to a general evacuation of the area. The ham radio equipped County Animal Rescue Team had responsibility of evacuating the animals in the affected zone.

By the time the drill had been completed, more than a dozen animals volunteered by their owners, had been transported to the fairgrounds and registered. The complete story s on-line at
http://www.mycentraljersey.com/apps/pbcs.dll/article?AID=/20080609/NEWS/806090320/1002/NEWS03
(mycentraljersey.com)

RESCUE RADIO: CHECKLISTS AND COMMON SENSE

Checklists, Common Sense and Experience is the title of an excellent article appearing in the July issue of Worldradio Magazine. In it, the magazine's Emergency Communications column author Jerry Wellman, W7SAR, gets away from the nuts and bolts of being prepared to respond in time of crisis. In this column he looks as emergency preparedness from a very personalize point of view.

To quote one key line that stands out, Wellman credits a reader as stating: "The ideal emergency response is a collection of individuals with skills to improvise and think and not rely on checklists and kits that probably won't be at hand anyway.

Wellman says that he is not advocating abandoning checklists to be sure an emergency responder has what he or she needs. But he indicates that the most important tool in a go kit may not be in the bag a responder carries. Rather, its that persons ability to think on the run as a situation changes.

The article is a must read for hams involved in emergency response work or for any ham who might one day be in the position of having to be an emergency communicator. It begins on Page 24 of the just out July issue of Worldradio Magazine. (Worldradio)

**

THE BPL FIGHT: SARL OBJECTS TO PROPOSED BPL RULES

Broadband over Powerline is in the news again. This with word that the South African Radio League plans to attend an upcoming hearing on the future of BPL Internet access in that nation.

The hearings will be held on June 18th and 19th According to South African telecommunications regulator ICASA the public gathering will discuss the draft regulations published this past February 7th for Technical Standards for Power Line Telecommunications operations.

After the publication of the draft regulations in the Government Gazette, South African Radio League and South Africa's HamNet submitted objections to certain aspects of the draft regulations. The main dissatisfaction is the lack of compulsory notching of amateur radio frequency allocations, limits which are too low to offer adequate protection and the dispute resolution process.

The draft regulations and the ham radio objections to them are available on www.sarl.org.za. Just click on the words PLC slash BPL. (SARL)

**

RESTRUCTURING: EUROPE HARMONIZES 3400 TO 3800 MHZ

The European Union has released its decision on the restructuring or harmonization of 3400 to 3800 MHz. This for use in terrestrial systems capable of providing electronic communications services to the European community.

.

The Commission Decision of May 21st says that no later than six months after the document takes effect that member states will designate and make available, on a non-exclusive basis, the 3400 to 3600 MHz band for terrestrial electronic communications networks. Then by January 1st, 2012 member states will expand the spectrum availability up to 3800 MHz . I both cases the band allocation will be made in compliance with the parameters set out in the appendix to the decision.

In European terms harmonization equates to agreeing on a way to use the spectrum at hand. (Southgate)

RADIO LAW: YES ITS OK TO RECORD AND DIVULGE HAM AND CB COMMS

Is it legal to record and divulge the content of ham radio and C-B radio communications? That's a question often asked by newcomers to ham radio or by those hams involved in chasing down malicious interference. FCC rules man Bill Cross, W3TN, says that the answer is yes, it is:

--

Cross: "There is an exception in the Communications Act -- I believe it is Section 706 of the Act -- Its called Privacy of Communications -- and it is a ection that was enacted in the early part of the (last) century that basically was designed so that radio operators aboard ships or other people that had to relay a message were not supposed to use that information or divulge it to someone else. But at the very end of it there is an exception and its an exception for the Amateur Service and the Citizens Service.

"The import of it is that it does allow the recording of amateur to amateur communications on the amateur bands. And that's really a part of the whole mentality we have of self policing and looking after ourselves and being able to report violative communications. But its an exception right there in the Act."

--

The bottom line is that if you hear a major violation of the Part 97 Amateur Service rules, don't be afraid to record it and then send the tape or CD to the FCC. (ARNewsline(tm))

**

ENFORCEMENT: BROOKLYNITE ORDERED TO PAY $1000 FINE FOR UNLICENSED STATION

The FCC has affirmed a $10,000 fine issued against New York resident Trevor Whitley. This, for what the Commuision terms as willfully and repeatedly violating Section 301 of the Communications by providing services and facilities incidental to the unlicensed transmission of communications by radio.

On January 25, 2008, the Commission's New York Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Whitley for playing hot to an unlicensed transmitter operating on 102.3 MHz in Brooklyn, New York. To date, Whitley has not filed a response to the N-A-L or paid the proposed forfeiture. So, based on the evidence before it the FCC has ordered Whitley to pay the fine within the usual time period or to file an appeal. (FCC)

**

ENFORCEMENT: DON'T OPERATE OUT OF BAND AGAIN

A California ham has been warned by the FCC that future instances of out of band operation will result in enforcement action against his license. In its May 20th letter to Frederick C. Severa, AH8I, of Chico, the FCC notes that back on March 1st 2007 it forwarded to his address of record in Pago Pago a complaint regarding out of band operation. The FCC says the letter was returned unclaimed.

The FCC says that finally a letter was sent to Severa at his Chico, California address on March 27, 2008 reached him. On April 25th AH8I replied. In his letter Severa stated that he had operated out of band only because it was dark in the vehicle and apparently he experienced a problem with improper VFO selection of the transceiver that he was using.

The FCC has accepted this explanation as being reasonable. In addition to warning Severa to not operate out of band the FCC also has instructed him to update his license records indicating the address at which he will receive Commission mail. (FCC)

**

RADIO LAW: CANADA AND MEXICO NOT SWITCHING TO ALL-DTV FOR YEARS

The United States may have next February cast in concrete for the final switchover from analog to digital television broadcasting, but its going to be a while before our neighbors to the North and to the South join us. Bill Pasternak, WA6ITF, has the rest of the story:

--

Canadian telecommunications regulators say that it will be at least another three years before any digital switchover takes place in that nation. And this only after Canada's broadcasting authority ruled that television stations would be forced to switch to ATSC digital broadcasting by August 31 2011. And then then there are a number of minor exceptions to this date. This for broadcast operations in remote areas where analogue transmissions will not cause interference to the new digital services.

As to Mexico? Don't even think digital for another quarter of a century. As of this writing, Mexico has no plans to switch to digital television until sometime in 2022 at the very earliest, and that's just for
a start-up date. It could take many more years before that nations digital transition is completed. And while Mexico has said that it will likey go with the ATSC system that is prevelent in North America, 25 years gives that nation a lot of time to explore alternative systems such as Europe's OFDM.

For the Amateur Radio Newsline, I'm Bill Paasternak, WA6ITF, in the studio in Los Angeles.

--

By the way, for those interested, Luxembourg was the first country to complete the move to all digital broadcasting. That happened almost two years ago on September 1st, 2006.

For more information on the DTV changeover worldwide, see http://en.wikipedia.org/wiki/Digital_switchover (CGC Communicator, Wikipedia)

**

HAM HAPENINGS: TECH PAPERS SOLICITED FOR DCC

Technical papers are solicited for presentation at the 27th Annual ARRL and TAPR Digital Communications Conference to be held September 26-28, 2008 in Chicago, Illinois. The submission deadline is July 31, 2008. Please send papers to Maty Weinberg, at the ARRL, 225 Main Street, Newington, Connecticut, 06111.

**

RADIO BUSINESS: KENWOOD AND JVC TO MERGE BY OCTOBER

Kenwood and JVC say that their proposed merger will be completed by this fall. Will this lead to a new high frequency radio from the labs at Kenwood Communications? Jeff Clark, K8JAC tries to provide an answer:

--

While nobody will say for sure, at least one reason that Kenwood has not introduced a new, high end high frequency transceiver to rival offerings from Icom, Yeasu and newcomer Heiberling could have to do with aspects of the companies business that have nothing directly to do with ham radio. Rather some are speculating that it might have been the merger of Kenwood with the Victor Corporation of Japan that may have at least temporarily sidelined any major high frequency Kenwood product introductions this year.

According to a joint news release the two Japanese electronics giants will combine to form JVC Kenwood Holdings. The new corporation will have its headquarters in the city of Yokohama. The new model business will focus on car electronics, home electronics, and professional wireless systems, and will also explore new product segments.

In an earlier statement by Kenwood it was stated that the merger would have no impact on the company's continuing support of the amateur radio marketplace.

I'm Jeff Clark, K8JAC.

--

The two companies appear to be combining to reduce operating costs while scaling distribution in the already crowded world-wide consumer electronics market.   (News.com, Southgate)

**

RADIO BUSINESS: MOBILE CONSUMER ELECTRONIC SALES CONTINUE TO GROW

And speaking about the world of consumer electronics, it looks as if the publics desire to own the latest and greatest in mobile electronics is a thirst that just cannot be quenched. This, even with a the price of gasoline reaching astronomic levels. Amateur Radio Newsline's Don Carlson, KQ6FM, has the details:

--

Sales of in-vehicle consumer electronics will grow at a rate of 13 percent in 2008 to more than $12.8 billion. That's the prediction of a study released by the Consumer Electronics Association.

In the study, "Automotive Electronics What Consumers Have and What They Desire," the Consumer Electronics Association said the typical American spends nearly 17 hours a week in a car. As a result, 38% of the driving age population intends to buy and install an in-vehicle product over the next year.

Topping the list at 15% are remote vehicle starters. That's followed by in-dash navigation systems at 13% and car alarms accounting for 12%. But says the Consumer Electronics Association there are also strong purchase intentions for technologies like HD Radio, satellite radio and DVD players.

In Reno, I'm Don Carlson, KQ6FM

--

The study also predicts that consumers are actually more likely to spend money on products that are not permanently installed in vehicles. They say that this signals a desire for flexibility and multi-location use when it comes to buying consumer electronic products, according to the trade group. (RW)

RADIOSPORT: ARDF CHAMPIONSHIP SEPT 2 - 7 IN KOREA

The 14th World Amateur Radio Direction Finding Championships take place September 2nd to the 7th at a location near Seoul, Korea. If your team wants to participate in the event and you have not sent the letter of intent yet, please send it as soon as possible to the sponsoring group. Full details and the needed form can be found at www.2008ardf.org. You should fill the category, name, callsign, date of birth and passport number of participants in the application and send it back via e-mail no later than July 30th. (Southgate)

**

CHANGING OF THE GUARD: ANTENNA DESIGNER DJ9BV - SK

The changing of the guard in amateur radio continues. This with the sad news that VHF and UHF antenna designer Rainer Bertelsmeier, DJ9BV, has passed away following a long illness.

Well known for his work on VHF Yagi's and other designs, DJ9BV was in charge of the highly respected VHF magazine Dubus until becoming too ill to continue. He was near the top of the 70cms listings, active on modes such as EME and was considered as being a wealth of knowledge that will be missed by all VHF and UHF operators. (Southgate, DJ0QN)

EMERGING TECHNOLOGY: LIVE HOLOGRAM PRESENTATION DOWN UNDER

Call this one its shades of the fabled star ship Enterprise's Holideck. But in this case its real and its now been demonstrated down-under. Here's Graham Kemp, VK4BB:

--

In an Australian first, Telstra has used a hologram to beam its Chief Technology Officer, Dr Hugh Bradlow, live into Adelaide from Melbourne to talk at a major function for senior business executives.

Dr Bradlow addressed and interacted with the audience for around 15 minutes and conducted a real time media conference following the function.

Staging Connections in collaboration with Telstra, Bytecraft Entertainment and in partnership with Musion Australia combined their respective experience and know-how to deliver this exciting industry first, which represents a new generation of video conferencing innovation in Australia.

Group Managing Director for Telstra Enterprise and Government, David Thodey,said "We've all seen this sort of thing in futuristic sci-fi movies, but the reality is that it can be done here and now, as we have just demonstrated, because of the scope and capability of Telstra's world leading networks.

For the Amateur Radio Newsline, I'm Graham Kemp, VK4BB, of the WAIA News in Brisbane, Australia.

--

Telstra is Australia's leading telecommunications provider. The hologram was delivered over its high speed network using the Musion Eyeliner System. This is a high definition holographic video projection method that allows three-dimensional moving images to appear within a live stage setting. And you thought it was only Hollywood movie magic.   (WIA News, Telstra national media release 146/2008)

**

HAM RADIO IN SPACE: A FREE RIDE TO ORBIT

Cubesat satellites built by students from universities in Belgium, France, Italy, Poland, Romania, Spain and Switzerland have been selected for a free ride to low earth orbit. The launch is scheduled on the maiden flight of the European Space Agency's new Vega booster from the ESA launch facility in Kourou, French Guiana.

Tentative date for the mission is late this year or in early 2009. The cubesat from Belgium is among the most interesting. It proposes to use D-Star as it's communications protocol. This in the hope of bringing digital ham radio voice communications into space.

More is on-line at: http://www.esa.int/esaED/SEM2BPUG3HF_index_0.html (ANS)

**

HAM RADIO IN SPACE: CUTE 1.7 DIGI IN TEST MODE

The Amateur Radio digital repeater function is now being tested on the Cute-1.7 cubesat. Information supplied to AMSAT by the satellites controllers say that they are currently testing an amateur digital repeater and a test message is being transmitted. FM packets are downlinked on 437.475MHz. Information on the and packet formats is available at http://lss.mes.titech.ac.jp/ssp/cute1.7/fm_mode_apd_e.html (Tokyo Institute of Technology)

**

RADIO NEAR SPACE: AN ALASKAN B.E.A.R. GRANT .

The Alaska Space Grant Program intends to expand a near space project called B.E.A.R. into a larger program. One that will allow University of Alaska Fairbanks students the opportunity to fly payloads of their own design, and to conduct atmospheric research in the spring and fall.

B.E.A.R. is an acronym for the Alaska-based Balloon Experiment And Research Program. It's a joint effort of the Alaska Space Grant Program and the Arctic Amateur Radio Club have formed December 2007. The program's aim was to launch a high altitude balloon equipped with several amateur radio projects as payload in the spring of 2008. On May 10th the balloon was launched and reached an altitude of 95,327 feet above Fairbanks. The balloon had three payloads in tow, all built and designed by Dan Wietchy, KL1JP. While in flight the balloon's ham radio gear captured more than 100 photos and some video which was returned to Earth.

The balloon parachuted back to Earth. It was found less than seven miles from where it was launched at Poker Flat Research Range.

Faculty from the Geophysical Institute already say that they are interested in designing graduate-level courses. Ones that will take advantage of this new method to bolster hands-on student research into near space. (Eureka Alert)

**

WORLDBEAT PORTUGAL: NEW D-STAR MACHINE ON THE AIR

CT1DQV says over the D-Star remailer that a new D-Star repeater is operational in Portugal at Serra do Leiranc. That's at 1146 meters above sea level at a site is located between Chaves and Boticas, in northeast area of that nation.

The new Portuguese D-Star system uses the call CQ0DCH. Its input is on 430,975 MHz and it transmits on 438,575 MHz with a 7.6 MHz split between its input and output frequencies. Its licensee, ownership and maintenance responsibility is in the hands of the Associano de Radioamadores do Alto Tamega. It will be a while before it joins the world wide D-Star gateway operation. (D-Star Remailer)

**

WORLDBEAT - UK: NEW FAST SCAN ATV STREAMING SITE

The British Amateur Television Club has announced a new amateur television streaming video Web Site. It designed to bring streamed fast scan ATV to the internet and allow cross repeater operation while working from its multi screen display. The site, located at www.batc.tv. will also carry a library of ATV programs and will act as a port for other ATV events to be streamed from around the world. (RSGB)

**

ON THE AIR: MALAYSIA SCOUTING SPECIAL CALLSIGNS

On the air listen out for eighteen Malaysian scouting special callsigns to be on air the rest of this year. This, in conjunction with the centennial anniversary of scouting in Malaysia and the World Telecommunication & Information Society Day 2008.

To help celebrate these events the Scouts Association of Malaysia has been granted eighteen never-heard-before heard special event callsigns with the 9M1CS prefix and suffix plus one other letter in the suffix. The callsigns are valid until December 31st, and will be used for the on air scouting jamborees. The Malaysian Amateur Radio Transmitters' Society will provide QSL Bureau services for most of the stations. Details are available http:\\jota.scouts.my. (Southgate)

**

DX

In DX, word that members of the the Spanish Amateur Radio League are active fro, Timor Leste as 4W6R through June 24th. Operations is on 160 through 6 meters, using CW, SSB and RTTY. The plan is to have two stations on the air at all times. QSL as directed on the air.

M0AEP, will be active from Montserrat signing VP2MDD through June 19th. He will be on 80 through 6 meters using various modes. QSL via home call, direct or via bureau.

Lastly, the special call sign TM400 will be active from France through June 15th. This, to celebrate the 400th birthday of the city of Quebec. QSL this operation only via the bureau.

(From various DX news sources)

**

PUBLIC SERVICE:: HAMS COMMUNICATE FOR NYC SALUTE TO ISRAEL PARADE

And finally, its one of New York City's cultural events and as in years past, ham radio has again provided a communications network for the annual Salute to Israel Parade. This years event took place on Sunday, June 1st and Amateur Radio Newsline's Mike Lisinco, N2YBB is in the Big Apple with more:

--

The ham radio communications nerve center for this years Salute to Israel Parade was in a multi-radio equipped van located at 68th Street and 5th Avenue in Manhattan. According to Steve Ostrove, K2SO, who is the amateur radio Communications Coordinator for the event, the ham radio network began operation at at 9 a.m. and finished at 5 p.m. Ostrove tells Newsline that five hams were assigned to the parade announce locations while others shadowed V-I-P's and event officials. One operator even had had on roller blade skates for his shadow job which K2SO said to proved to be very successful.

Ostrove says that he knows of only one call for medical aid handled by the ham radio network. Most of their job consisted of relaying information for the parade announcers, locating missing materials and all of the other incidental utility communications for an event of this scope.

The Salute to Israel Parade began in 1964 when handful of people walked along Manhattan's West Side Highway in a show of support for the State of Israel. In the mid 1960's the event had grown into a full scale cultural event on Manhattan's 5th Avenue with thousands of marchers that included bands and floats. It was then that parade organizers approached the late Lou Belsky, K2VMR, to ask his assistance in providing communications for the event after a trial using 11 meter C-B radio gear proved unsuccessful.

In its early years K2VMR built the communications network was on 6 meter A.M. on 50 point 4 Mhz. Ironically that was the old Brooklyn, Kings County ARES net frequency and was chosen only because most hams operating mobile in the New York City area carried it in their radios.

By 1970 the ham radio communications for this event had moved to 2 meter F.M. as that mode became dominant nationwide. The current ham radio communications network is an outgrowth of those early years but refined to use the latest in ham radio communications technology. It's a network that Steve Ostrove, K2SO, and others have been improving over the years.

For the Amateur Radio Newsline, I'm Mike Lisenco, N2YBB, in New York. 73 and Shalom.

--

This years parade also happened to coincide with the 60th anniversary of the creation of the State of Israel and making it the biggest in the events history. There were some 100,000 participants marching up Fifth Avenue cheered on by over one million spectators. And behind the scenes was a small group of ham radio communications volunteers making sure that every detail of the parade was just as it was supposed to be. .

More information on the Salute to Israel Parade is on-line at www.salutetoisrael.com

A article detailing Steve Ostrove, K2SO, life, career and involvement in the parades communications effort can be read at www.njjewishnews.com/njjn.com/052908/njAHamHandle.html (ARNewsline(tm) with information supplied by K2SO and historic information from ex-WA2HVK)

**

NEWSCAST CLOSE

An emergency service organization should put up and maintain their own repeaters. For example, in the last 3 years, the Southern Nye County (NV) ARES group put up and maintain four repeaters (2 on 2M and 2 on 70cm) so we will have them in emergencies. We make a point to talk on them at least once a day to make sure they work. But 99% of the time they are idle, and thus may appear to the casual observer to be unused.

==> HAMS ON HAND AS FLOODS SWEEP ACROSS MIDWEST US

When severe thunderstorms started to threaten the Midwestern United

States with tornadoes, hail, severe lightning and rain starting on June 4, state agencies were quick to call on Amateur Radio operators for assistance.

The Indiana Department of Homeland Security (IDHS) activated ARES members to help out with communication efforts, providing radios for those amateurs who offered to help. ARRL Indiana Section Emergency Coordinator Tony Langer, W9AL, said hams were instrumental in many ways, including assisting in Emergency Operations Centers, sand bagging, helping out in shelters and even aiding in rescue efforts.

This storm brought 12 confirmed tornadoes to 11 Indiana counties, with some communities reporting up to 11 inches of water, Langer said; 20 counties were under a State of Emergency. On June 9, President Bush declared 29 counties in central Indiana a major disaster area, opening up the region to receive federal aid and FEMA assistance. Four people perished in the storms.

In a call put out to Amateur Radio operators on June 8, IDHS said, "The flood waters have impacted several counties here in Indiana severely. Ham Radio operators have been operating continuously since activated and are growing weary. Some counties do not have a vast amount of active hams to relieve these tired operators." Specific areas needing amateur assistance were overnight relief operators at the Bartholomew County EOC, as well as the EOC and three shelters in Columbus County.

Marion County (Indiana) Emergency Coordinator Mike Palmer, N9FEB, called on ARES members in his area to help out. "People might think, 'Why not just use telephones or cell phones?' Well, many phones are not working down there at this time. With the high waters, electric transformers are out all over; even those servicing cell towers are out. Even with today's technology, we find ourselves looking at ham radio to assist. If you can spare a few hours or an entire evening, please consider helping."

Indiana Governor Mitch Daniels called in the United States Coast Guard to assist in evacuations and rescues. The Coast Guard responded by sending two helicopters to the state along with boats and personnel. The Indiana National Guard was called out to assist in evacuation and direct traffic and enforce road blocks on the many flooded roads.

Torrents of rain also brought flooding to Wisconsin. On June 9, five counties had requested aid from Amateur Radio operators, ranging from backup communications to disaster assessment and flooding communications. One county called on ARES members to provide patrols of the flooded areas overnight on Tuesday and Wednesday.

According to ARRL Wisconsin Section Emergency Coordinator Bill Niemuth, KB9ENO, approximately 90 ARES members responded to the call for assistance. "In Columbia County, ARES members provided dam monitoring communications early in the flooding. These communications gave critical information to public safety officials about two dams that were nearly compromised. Due to falling water levels, this activity has been discontinued, but hams remain on standby due to the threat of additional heavy rain," Niemuth said.

Richland County ARES members remain activated, Niemuth said. "Hams are providing a variety of services, including fielding information calls in the County's Emergency Operations Center and providing specialized communications for disaster assessment by hover craft and airplane. These communications are in addition to providing traditional ham radio communication links between the EOC and evacuation shelters."

On Thursday, June 12, more rains inundated the state and more counties requested aid from area Amateur Radio operators. Niemuth said Winnebago County ARES members are providing damage assessment assistance in the county and in the City of Oshkosh, while hams in Fond du Lac are helping out with shelter communications. ARES teams in Marquette and Outagamie are providing back-up communications and flooding reports to their respective Emergency Operations Centers. -- Information provided by ARRL Indiana Section Emergency Coordinator Tony Langer, W9AL, and ARRL Wisconsin Section Manager Don Michalski, W9IXG

==> "WE DO THAT" WITH AMATEUR RADIO

The third ARRL Public Relations campaign -- "We Do That - with Amateur Radio" -- celebrates the technology side of ham radio <http://www.hello-radio.org/wedothat/>. According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, Amateur Radio means many things to many people. "What is it about Amateur Radio that arouses the interest of people?" Pitts asked. "You have the fun, friendship and hobby side. We showcased this side in 2006 with our 'Hello' campaign <http://www.hello-radio.org/hello/>. You have the emergency service side. We brought this valuable part of Amateur Radio to the public's eye in 2007 with 'Emergency Radio -- Getting the Message through for Your Family and Community' <http://emergency-radio.org/>. And now you have the technology and creative side. In 2008, we are capitalizing on this third prong, getting word out to the public that there is tons of stuff you can do with Amateur Radio."

Unveiled at the 2008 Dayton Hamvention this past May, this new coordinated public relations effort shows the world the technological activities and creative imaginations that Amateur Radio's people love. Like the previous public relations campaigns, Pitts said, this is a campaign with several interlocking parts.

* Public Service Announcements
There are Public Service Announcements (PSAs) that commercial radio stations can utilize, getting word out to the public about the benefits that ham radio operators can provide. Check these out on the ARRL Public Information Officer Web site <http://www.arrl.org/pio/>; more will be coming out as the year unfolds. These mp3 files are easily downloaded and can be taken to local radio stations. "Many radio stations have a public service obligation they need to fulfill, and these PSAs are a great way for them to do so, while showcasing the neat things we do as hams," Pitts said.

* Brochures
ARRL has created an attractive brochure that celebrates ham technology <http://www.arrl.org/brochures/>. This brochure shows hams doing many exciting activities, from Green Radio -- Amateur Radio using renewable energy sources -- to the search for extraterrestrial intelligence (SETI) through time and space itself. These brochures, in packs of 25, are available at no cost except for a small shipping fee.

* WeDoThat-Radio.org
A new special Web site has been created just for this campaign. "Maximizing the strong points of the Hello-Radio and Emergency-Radio Web sites before it, WeDoThat-Radio.org <http://www.wedothat-radio.org/> uses some of the newer technologies similar to the blog format, allowing for easy topic additions and changes, even providing a place for visitors to ask questions," Pitts said.

* Stickers
Let's admit it, hams and kids like free things and stickers are fun. So we made up a bunch to share. If you happen to have a presentation to students, it's a nice touch. These are "free while the supply lasts," Pitts said.

* "Talk on a Disk"
What began as an experiment in 2007 has since become a major success. The ARRL's "Talk on a Disk" was quickly snatched up and used by people making presentations to groups. This CD contains all the materials you need to make a good PowerPoint presentation before a non-ham group, including slides and supportive audio and video. "For 2008, we created a brand new 'Talk on a Disk' highlighting the technology campaign and coordinated with the brochures. It can make almost anyone look good in front of a group. Just follow the script! Or, you can modify it to meet local needs," said Pitts. If you have a presentation to make and want to talk about the technology of ham radio, please e-mail Pitts about it <apitts@arrl.org>.

* "Swiss Army Knife for PIOs"
The 2008 "Knife," Pitts said, is actually a CD with all the basic forms and information a Public Information Officer (PIO) should need -- all in one place. "Last year, we produced more than 1000 of these and they were all snatched up," Pitts said. With audio and video files, documents in computer forms that PIOs can modify to meet local needs, as well as hundreds of pointers and ideas, the "Swiss Army Knife for PIOs" has become a mainstay for public relations work. Disks are available for PIOs by sending Pitts an e-mail <apitts@arrl.org>.

* Every Ham is a PIO
"There is a saying," Pitts said, "that all news is local -- and it is true. If there is not a local or personal 'hook' to a story, it does not make it into the news. Because of this, the Public Information Officers in your area are critical to the local perception of Amateur Radio." When PIOs take these materials and modify them for local use, it affects everything from antenna regulations to club membership levels. But it is

not just up to the PIOs to achieve positive publicity for hams, Pitts said. "There is another saying, 'Every ham is a PIO.' When people become curious about Amateur Radio they turn to the first ham operator they find and that conversation is crucial to the future. All the brochures, TV ads, radio and news stories are of no benefit if that initial conversation with a potential recruit is not positive. PIOs can only 'bring the fish to the boat.' It is up to every ham to be ready to bring them in by taking the time and effort to make the initial one-on-one contact a positive experience. In the end, 'It takes a ham to make a ham.'"

* Need Help?
There is a wealth of materials available on the ARRL PIO Web site for anyone to use <http://www.arrl.org/pio/>. Here you can find background information handouts for media, as well as all sorts of helpful files and tips. Each month, Pitts puts out "CONTACT!," an e-zine for ARRL PIOs that contains ideas, information and timely materials. The ARRL Public Relations Committee is also able to aid groups facing unusual problems or situations. These PR veterans have a wealth of knowledge you can draw upon. There is a public relations email reflector where PIOs from around the country share their problems, ideas and successes with other PIOs.

* It's Up to You
The energies that your club -- and you as an individual -- put into positive PR work will pay off for your radio future in many ways, Pitts said. "Go show the world that 'It's not just your grandfather's radio anymore.'"

==> LOOK FOR THE JULY ISSUE OF QST IN YOUR MAILBOX

The July issue of QST is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

John Stanley, K4ERO, discusses how looking at signals can improve our ability to listen to them in the second of his two-part article "The Beauty of Spectrum Analysis -- Part 2." Jack Morgan, KF6T, takes a look at a two element 15 meter Yagi that works great in the field. ARRL News Editor S. Khrystyne Keane, K1SFA, gives her impression on the sights, sounds and smells of the 2008 Dayton Hamvention in her article "Dayton Hamvention 2008: Wow, What a Show!"

Former ARRL Senior News Editor Rick Lindquist, WW3DE (ex-N1RL), reviews FlexRadio System's FLEX-5000A HF/50 MHz transceiver. According to Lindquist, "The FLEX-5000A builds on the success of the SDR-1000, retaining the top-shelf radio performance and adding features. The package is far less complicated, shedding the many wires, cables, boxes and connectors that characterized the SDR-1000. Be prepared to experiment with the software and settings to get the most from this radio."

If it's July, it must be time for the IARU HF World Championships

<http://www.arrl.org/contests/rules/2008/iaru.html>. This is a great opportunity to contact many stations all over the world, especially the headquarters station of IARU Member Societies, including W1AW. ARRL Contest Branch Manager Sean Kutzko, KX9X, takes a look at what you can do in the "contest off-season" to spruce up your shack and get those antennas and feed lines ready for the fall in "This Month in Contesting." The results of the 2007 ARRL 10 Meter Contest, the 2008 ARRL RTTY Roundup and the 2008 ARRL January VHF Sweepstakes are in. Did you top your score from last year? How did your closest rival do? Also, find out about upcoming contests in Contest Corral.

Of course, there are the usual columns you know and love in July QST: Hints & Kinks, The Doctor Is IN, How's DX, Old Radio, Technical Correspondence, Hamspeak and more. Look for your July issue in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> GET READY TO RIDE THE WAVES AT THE 2008 ARRL FIELD DAY

The 2008 ARRL Field Day <http://www.arrl.org/fieldday> will be here before you know it, so now is the time to grab your rig, hang ten (a dipole or two will do) and plan to Ride the Waves June 28-29. Field Day packets can be downloaded from the ARRL Field Day Web site <http://www.arrl.org/contests/forms/fd-2008-packet.pdf>.

ARRL Field Day Manager Dan Henderson, N1ND, reminds clubs and groups that the deadline to order exhibit kits is drawing near. "We need to have all orders for kits and brochures no later than Tuesday, June 17. If we have your order by then, we will be able to package your order and get it to you in time for Field Day. Any orders received after June 17 will be fulfilled and may make it to recipients before Field Day," he warned. Exhibit kits can be ordered online <http://www.arrl.org/brochures/> at no cost; there is a small shipping and handling fee.

If you are looking for a Field Day site to attend, or are looking to publicize your Field Day site, be sure to check out the Field Day Site Locator <http://www.arrl.org/contests/announcements/fd/locator.php>. For more information on this new service, please check out the Locator Site Frequently Asked Questions (FAQ) Web page <http://www.arrl.org/news/stories/2008/06/03/10021/?nc=1>. "More than 1100 Field Day sites have registered their sites on the Locator, with more being added every day," Henderson said.

ARRL Field Day is the most popular on-the-air operating event in Amateur Radio. On the fourth full weekend in June, tens of thousands of Amateur Radio operators gather for a public demonstration of our service. Field Day is part educational event, part operating event, part public relations event -- and all about fun!
Amateur Radio is about knowledge and growth. It is a hobby and service

that truly offers "something for everyone." Amateur Radio embraces both the old and new. While CW may no longer be a testing element, it is still a strong and favorite operating mode for many. Many operators are embracing digital technologies -- from RTTY, to newer digital modes like PSK31 and Olivia. Phone operation also has new frontiers to be explored with digitized voice, VoIP and IRLP. And this is why Field Day -- the largest annual on-the-air operating event -- is so exciting. It gives all -- the old timer and the newcomer, the brass-pounder and the computer-assisted operator -- the chance to share and teach the broad range of modes and technologies we find in Amateur Radio.

Field Day is truly the time in which we bring Amateur Radio to Main Street USA <http://www.arrl.org/news/features/2006/03/01/1/>. By setting up in parking lots, malls, Emergency Operations Centers, parks and even at home, Amateur Radio operators learn skills that will allow them to better serve their communities. Setting up in these public venues gives added public relations value -- their friends and neighbors can see and experience the fun and public service capability that their "ham radio" neighbors bring to the community.

==> SPRING FREQUENCY MEASURING TEST (FMT) RESULTS ANNOUNCED

The results for the W1AW Frequency Measuring Test (FMT) <http://www.arrl.org/w1aw/fmt/> held on May 21, 2008 are in <http://www.b4h.net/fmt/fmtresults200805.php>. Announced and reported completely online <http://www.arrl.org/news/stories/2008/04/29/10071/?nc=1>, the spring version of the exercise attracted 81 participants. The object was to measure the frequency of an audio tone, given the frequency of the transmitted signal's carrier. Since digital modes based on frequency-shift keying (FSK) require precise tuning, being able to measure frequency is an important skill.

The actual frequency of the tone was 1240.3 Hz for all of the W1AW transmissions. The majority of the participants reported frequencies within 1-5 Hz of the exact value, a 0.08 to 0.4 percent error. Participants could use a variety of measurement techniques, some of which are described in the November 2004 QST article announcing an FMT with a similar focus <http://www.arrl.org/w1aw/fmt/2004/04fmtsilver.pdf>. The online results include detailed descriptions from many stations of the methods and equipment used to make the measurements.

W1AW Station Manager Joe Carcia, NJ1Q, plans to run additional FMT exercises on a regular basis, so watch the ARRL Web Site <http://www.arrl.org> for future announcements. If possible, a West Coast station will be added to future FMTs, improving signal quality for participating stations in that region, particularly on the lower frequency bands. Automated results collection and reporting will be supported for all future FMT events.

==> FCC ENFORCEMENT ACTIONS

On March 1, Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth sent a Warning Notice to Fredrick C. Severa, AH8I, of Pago Pago, American Samoa, concerning Severa's out-of-band operation.

In the letter, Hollingsworth said he tried contacting Severa at his Pago Pago address (his address of record) about the matter, but the letter was returned unclaimed, as were other letters sent to him at an address listed for the American Samoa DX Society in California; Severa is listed as trustee for the organization. Hollingsworth said that the Commission tried reaching Severa at another address for the American Samoa DX Society in California -- this one in Juneau, Alaska -- but to no avail.

Finally, on March 27, Hollingsworth sent Severa a letter to a Chico, California address. Severa replied to the letter, stating "that [Severa] had operated out of band because it was 'dark in the vehicle and apparently I experienced a problem with improper VFO selection of the transceiver that I was using which caused me to transmit out of band.'" Severa's letter failed to mention, Hollingsworth said, why Severa "failed to respond to mail sent to your address of record."

Hollingsworth advised Severa "that future instances of out of band operation will result in enforcement action against your license. Additionally, you are requested to update your license records within 10 days indicating the address at which you will receive Commission mail. Failure to respond to Commission mail sent to your address of record is a separate violation of Commission rules."

Hollingsworth also sent a letter to residential owners in Phoenix, Arizona, regarding Part 15 devices in their home causing RFI to a licensed Amateur Radio operator.

Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to Riley Hollingsworth <fccham@fcc.gov> in the FCC Spectrum Enforcement Division.

==>SOLAR UPDATE

Tad "I swayed my leaves and flowers in the Sun" Cook, K7RA, this week reports: Sunspot 998 emerged this week, another old Solar Cycle 23 sunspot near the Sun's equator. Daily sunspot numbers for June 10-12 were 14, 11 and 13. Last Sunday, June 8, had the lowest 10.7 cm solar flux value I've ever seen -- 64.9 -- at the observatory in Penticton. The noon reading is the official daily sunspot number; the value observed that morning at 1700 UTC was actually a tiny bit lower at 64.8. The only value this low I have in my records was almost a dozen years ago near the last solar minimum, July 19, 1996. The 10.7 cm solar flux is a measurement of energy at 2.8 GHz gathered by an antenna in British Columbia. The facility is the Dominion Radio Astrophysical Observatory (DRAO) that sits 168 miles northeast of my Seattle location at approximately 49.322 degrees north latitude, 119.621 degrees west longitude. The solar flux value is a general indicator of solar activity, but not as useful as sunspot numbers for predicting propagation. Geophysical Institute Prague expects quiet conditions for June 13, quiet to unsettled June 14, unsettled June 15-18 and quiet to unsettled June 19. Sunspot numbers for June 5-11 were 0, 0, 0, 0, 0, 14 and 11 with a mean of 3.6. The 10.7 cm flux was 66.4, 65.9, 65.6, 64.9, 66, 66.2, and 65.7 with a mean of 65.8. Estimated planetary A indices were 2, 8, 12, 7, 5, 4 and 4 with a mean of 6. Estimated mid-latitude A indices were 3, 7, 10, 5, 2, 1 and 3, with a mean of 4.4. NASA predicts more of the same quiet conditions, with slight possible unsettled conditions on June 18, with a planetary A index of 12. They expect solar flux to stay below 70 until mid-July. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend is the ARRL June VHF QSO Party on June 14-16. Look for the NCCC Sprint Ladder and the Digital Pentathlon on June 13. The Portugal Day Contest and Asia-Pacific Sprint (SSB) are June 14. Look for the ANARTS WW RTTY Contest, the GACW WWSA CW DX Contest, the REF DDFM 6 Meter Contest and the West Virginia QSO Party on June 14-15. The Run for the Bacon QRP Contest is June 16, and the RSGB 80 Meter Club Championship (SSB) is June 19. Next weekend, look for the Digital Pentathlon on June 20. The Feld Hell Sprint and the AGCW VHF/UHF Contest are June 22. The All Asian DX Contest (CW) and the SMIRK Contest are June 21-22. On June 25, be sure to check out the SKCC Sprint and the BCC QSO Party. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* Firedrake Jammer on the Loose Again in Asia: Amateur Radio operators throughout the United States have reported hearing an intruder signal -- dubbed Firedrake -- on 20 meters. ARRL Field and Regulatory Correspondent Chuck Skolaut, K0BOG, said he has received reports from Intruder Watch monitors in Texas, Montana, West Virginia, Massachusetts, Colorado, Washington, Nevada and Pennsylvania hearing the jammer on 14.010 and 14.070 MHz. Hams in IARU Region 1 have heard the jammer on 14.000, 14.005, 14.010, 14.030, 14.050, 14.050 and 14.090; Uli Bihlmayer, DJ9KR, Assistant Monitoring Coordinator for Region 1 (IARUMS) <http://www.iarums-r1.org/> said he has had reports of hearing the jammer on three frequencies at the same time. Skolaut said he heard it on 14.070 at 1500 EDT on June 6 from ARRL HQ, but has not confirmed Firedrake on any other frequencies. "We have reported the jammer to the FCC's High Frequency Direction Finding (HFDF) facility in Columbia, Maryland. They have also heard the jammer and have sent a harmful interference report to the Chinese government," Skolaut said. The FCC has no authority to make intruder stations outside the US stop transmitting on Amateur Radio frequencies; such situations typically are

dealt with through diplomatic channels. "All three IARU regions are coordinating efforts to collect observations and forward them to the proper authorities to follow up on this," Skolaut said. "As you probably remember, this jamming occurred almost two years ago <http://www.arrl.org/news/stories/2006/08/17/2/> and was primarily heard on 14.260 and 18.160 MHz." According to Bihlmayer, the jammer (whom Region 1 monitors have dubbed Firedrake) plays oriental-type music (click here to hear what Firedrake sounds like - <http://www.arrl.org/news/files/firedrake.mp3>) and originates from the Chinese government in an attempt to block out the Sound of Hope short wave broadcasts <http://sohnews.com/shortwave-broadcasts/>. The Sound of Hope refers to itself as "a Chinese language media network providing an alternative to China's state controlled media with news and cultural programming. Radio Free China (RFC) is Sound of Hope's project to reach listeners in Mainland China with programming beyond the control of China's omnipresent blockade of free information." Information on the Intruder Watch program can be found in the June 2007 issue of QST.

* New Extra Class License Manual Now Shipping: The "ARRL Extra Class License Manual" <http://www.arrl.org/catalog/?item=1352#top> and "ARRL's Extra Q&A" <http://www.arrl.org/catalog/?item=1379> are your tickets to every privilege granted to Amateur Radio operators. Expert instruction leads you through all of the knowledge you need to pass the exam, including rules, specific operating skills and more advanced electronics theory. Everything you need to know to pass the 50 question Extra class exam is right at your fingertips -- both books contain the latest Extra class question pool and answer key. Study the "ARRL Extra Class License Manual" to understand the theory and applications needed to upgrade your license. With more than 700 questions included in the question pool -- valid from July 1, 2008 to June 30, 2012 -- reading the "ARRL's Extra Q&A" is the best way to review for the exam with confidence. The Extra class license is the highest of all three US Amateur Radio licenses. To upgrade to Extra class you must already hold a General class license (or have recently passed all of the exams required for a General class license). Upgrading to an Extra license only requires passing a written examination. As an Extra class licensee, you will have full privileges on all frequencies authorized by the FCC for Amateur Radio.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 22, 2008 for these online course sessions beginning on Friday, July 4, 2008: Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with

mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Jim Veatch, WA2EUJ, Wins May QST Cover Plaque Award: The winner of the QST Cover Plaque Award for May is Jim Veatch, WA2EUJ, for his article "The TAK-40 SSB CW Transceiver." Congratulations, Jim! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the June issue by Monday, June 30.

* ARRL Announces New DeSoto Cup Winner: The ARRL's DXCC Desk announced June 3 that Fausto Minardi, I4EAT, is the winner of the 2007 DXCC Challenge DeSoto Cup <http://www.arrl.org/awards/dxcc/DeSoto-Trophy-lrg.jpg>. According to ARRL DXCC Manager Bill Moore, NC1L, Minardi achieved this honor with 3129 band points. Bob Eshleman, W4DR, placed second with 3124 band points; Leif Ottosen, OZ1LO, holds the third place spot with 3119. The DeSoto Cup was first presented in 2000 to Eshleman; he has received the award each year since. The 2007 race saw the closest point spread -- five points -- since the DeSoto Cup's inception in 2000. Moore said that in 2006, Eshleman was leading the race, but Minardi briefly pulled ahead; Eshleman recovered the lead in time to take the Cup for 2006. He continued: "In 2007, the same thing happened with Eshleman leading the pack, but Minardi pulled ahead again and kept the lead and took the title away from Eshleman for the first time ever. I wonder who will take the Cup in 2008." It looks to be another race this year, Moore said. "Showing no mercy, Minardi recently increased his lead even more by achieving a new level of 3139! Fifteen band points now separate the number 1 and number 2 spots!" The DeSoto Cup is presented to the DXCC Challenge leader as of December 31 each year <http://www.arrl.org/news/stories/2001/05/08/3/>. The DeSoto Cup is named for Clinton B. DeSoto, whose definitive article in October 1935 QST forms the basis of the DXCC award. Only one cup will be awarded to any single individual. A medal will be presented to a repeat winner in subsequent years. Medals will also be awarded to the second and third place winners each year. The DXCC Challenge Award is given for working and confirming at least 1000 DXCC band-entities made after November 15, 1945 on any of the amateur bands, 160 through 6 meters (except 60 meters).

===

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site

<http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org
==>ARRL News on the Web: <http://www.arrl.org>
==>ARRL Audio News: <http://www.arrl.org/arrlletter/audio/> or call 860-594-0384

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup for amateur radio operators and other people having an interest in the Amateur Radio Service, as defined by national regulations and international treaties. Following are the posting guidelines for this newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines

2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

----

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur radio operators and other people having an interest in the Amateur Radio Service. Participants are invited to engage in open discussion of amateur radio issues and exchange information about participating in the hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions and discussions about amateur radio licensing, regulations, tips on various aspects of setting up an amateur radio station, and sharing operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade posts, posts that are off-topic to the Amateur Radio Service, posts promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

----

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:

- Welcome to Usenet!
- Rules for posting to Usenet
- Hints on writing style for Usenet
- A Primer on How to Work With the Usenet Community
- Emily Postnews Answers Your Questions on Netiquette
- Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html |

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

Right you are, Phil! I should have noted that while such services existed, their cost was such that most "average people" could not afford them.

One of the bedrock notions of Amateur Radio is for licensees to "get caught up in" the advancement of the radio art.

In my opinion, too >FEW< are "caught up in that".

Chat rooms for teenie-boppers isn't mentioned in "Basis and purpose"

Before ham autopatches were popular on repeaters, the telcos - both wireline and non-wireline - offered Mobile Telephone Service (MTS) using mobile operators and Improved Mobile Telephone Service (IMTS) permitting subscriber dial. Expensive - you bet - but they were available to the average person. Some of those transceivers found their way into the ham market after the telcos upgraded to newer stuff.

Actually, the "supply" of (pre-cellular) mobile phone service was grossly inadequate to meet the demand for it. That is what drove the development of cellular phones. Even the owners of the limos in which it was installed often complained of having to wait 15 minutes or more to get a dial tone. (You will recall that that service used the 150 MHz band and there was no law against monitoring it. This was pre-Electronic Communications Privacy Act.)

Spread-spectrum, digital modes, moonbounce . . . none of these are mentioned in "Basis and purpose".

I don't see any conflict between "chat rooms for teenie-boppers" and "forge new technology". In fact, I see a lot of similarity between "chat rooms for teenie-boppers" and the groups that have been squatting on the same frequency on 75 meters for 40 years and complain of interference, even though there's lots of unused newly-allocated space.

Some of those younger hams contribute a lot to our hobby, and I wish we could figure out ways to attract more of them. Maybe a good start would

be to recognize their potential and quit using derogatory terms to
describe them.

Hear Hear, Steve!

I would respectfully suggest that we as hams give a little thought as to whether or not we actually want young folk in the hobby.

This is beyond the simple statements such as "we need more young people in the hobby".

Probelem as I see it is that while we might sayt that, alll too many of us have an implied addidition to that of "As long as they are exactly as we are.

And the problem is, "we" is an interesting one word.

I know many hams who are surrounded with like minded people, other Hams who share similar interests. They have an outlook in which they think everyone is like them, or at least everyone should be. Those who do not share their outlook are inferior, or at best misinformed.

Strangely enough, many of these hams were licensed at a very young age.

What happened? I don't really know, but I suspect that there were some old timers who just couldn't stand those young hams of yesteryear, too. I'll bet they had names to call them.

related story

When I was a wee lad, after a lot of bugging, My parents bought me a CB Walkie-talkie one Christmas. The other one of a set was bought by my cousin's parents. About 0600 Christmas morning, I went outside and called "anybody listening?". Bam, my cousin called back from a couple miles away. I was hooked.

Fast forward to about 6 months later. A friend and I tried to join a CB club. Wow, what a mistake! After a little talk among the members, we were told we couldn't join, and they would appreciate it if we left immediately. That left an impression. To this day, I have a problem with superior people. But I bet they were pretty happy they got rid of us.

Fast forward to today.

Kids are a little different, but are still kids. They do some different things than we do. One of those things is they way they interact with each other.

If we declare them jerks, then we've lost them. If we even don't say it, yet have that attitude, they'll sense it and find something else to do. Then we've lost them.

I've been kind of surprised by the negative reaction to my texting HT. This device is not aimed at "us", it is aimed at a new generation for whom texting is as natural as talking to another.

Maybe today's hams don't want young people to get licenses. That's okay, that is a valid opinion.

But I would respectfully suggest that getting the young folk involved will take a different tactic than the way many of us became inolved. I think we should give that some consideration.

I'm bowing out of this thread now.

I second that!

I know a few "young people", and IMHO "teenie-bopper" is a derogatory term for them.

Agreed. And we should be honest in recognizing that there is a small
but vocal minority who do *not* want young people to be
hams. Some years back, I saw a proposal to FCC to create a minimum-age
requirement of 14 years for any class of US amateur radio license.

Of course. That's one facet of human nature.

OTOH, Amateur Radio does have standards, traditions,
rules, etc. I don't think it's a good thing to simply accept/promote
any and all "new" things, regardless of what effects they have, simply
because they're new, and to reject the "old" simply because it's old.

That said, we have so much latitude in Part 97 that I think there's
lots of room for 99% of what folks want to do.

That's nothing new. "No kids, no lids, no space cadets" dates back at
least a half-century.

> Kids are a little different, but are still kids. They do some different

I became a ham at age 13, mostly through what I learned from ARRL books. The big attraction was that Radio in general and Amateur Radio in particular looked like a lot of fun to me. And for more than 40 years, it has been.

I think there is a sense that, back in the Old Days, there were young hams (high school and younger) all over the place. In my experience as a young ham (1960s-70s), however, that was not the case at all. Ham radio was a niche thing back then, same as now, even without computers, cell phones, etc.

There were a few curmudgeons back then who had no time for young hams. But they were only a few. And a considerable number of young hams dropped out because equipment was expensive, antennas were huge compared to their houses, and/or they got interested in other things.

One big "hook", for me was that except for those few curmudgeons I was not treated as an inferior - particularly on the air. A big part of this was due to the mode I used - Morse Code. With Morse Code (and text modes), no one knows your age or gender unless you tell them. Operating skill, QSO content and signal quality established one's on-air reputation, not how deep or gravelly your voice was.

To speculate wildly, it might be that one cause for curmudgeon-ness is the fear of what advancements/accomplishments the young folks might actually make.

> I've been kind of surprised by the negative reaction to
> my texting HT.
> This device is not aimed at "us", it is aimed at a new
> generation for
> whom texting is as natural as talking to another.

I think you may have missed the point, Mike.

I don't think the way to attract young people is to come up with some new gadget in an effort to attract them. Particularly if it does something that's already available, such as texting by cellphone.

That said, I think a texting HT is a great idea. But for its own sake; not as a way to "sell" ham radio to young people.

The core value of Amateur Radio is "radio for its own sake". Some folks get that, most do not. The task is to spread that word to all, publicize the wide variety of things hams do, welcome those who are interested, and help them with what *they* find interesting.

Oddly enough, a lot of the young hams I have met are fascinated by Morse Code, simply because it is unique and outside their experience. That doesn't mean it's the only thing to show them, or that all new hams must start out one and only one way. But it does mean we cannot assume young hams are only interested in "new" things.

> Maybe today's hams don't want young people to get
> licenses. That's okay, that is a valid opinion.

I'd say that in a few cases there is no "maybe" about it. But only a few.

I say that such an opinion runs counter to everything Amateur Radio stands for.

> But I would respectfully suggest that getting the young folk involved
> will take a different tactic than the way many of us became
> inolved.

Some ideas:

1) Presentations at the middle-school and even elementary-school level - including the parents.

2) Identify local hams who are available to be Elmers. (I suspect that some of the curmudgeon-ness is due to the fear of being expected to be an Elmer).

3) Subtle helps to prospective young hams, such as a ride to a club meeting, Field Day or hamfest, the loan of a rig, the gift of a box of "old wire" that happens to contain all the parts needed to build an antenna, etc.

4) Inclusion and acceptance. This means being considered an equal, or at least a potential equal. For example, put new hams or prospective hams to work with FD setup, logging, etc. (That means knowing how to do things the right way, though!)

Me too. But I do think that we have increased competition these days from other outlets for prospective hams, and other things that "look like a lot of fun". Computers and such gadgets are a part of daily life for young folks these days; it's only natural that they gravitate in that direction. I suspect that the vast majority of them have not been exposed to ham radio at all.

I had a good buddy when I was that age who was interested in radio and electronics, and peer pressure being what it is, I followed his lead. Those people are fewer these days.

> I think there is a sense that, back in the Old Days, there were young

Yes, I agree. I do remember more young hams back then, though. It was mostly a hobby for older people, but I do think there were more young hams then.

> There were a few curmudgeons back then who had no time for young hams.

A considerable number of old hams dropped out for similar reasons, sometimes providing a source of equipment for the new folks.

> air reputation, not how deep or gravelly your voice was.

This was a very important consideration for me, too. Even for the operation that I did on phone, by and large people treated me as an equal, and if I demonstrated skill they recognized that skill without regard to my age. Even in traditional in-person interactions like club meetings and Field Day operations, I was treated as an equal if I could demonstrate that I deserved to be treated that way. Generally speaking the local ham community was eager to reach out and teach me if it was obvious that I needed teaching.

I can't think of another hobby where I could have gained access to such a community of people who were often peers of my parents.

> To speculate wildly, it might be that one cause for curmudgeon-ness is
> the fear of what advancements/accomplishments the young folks might
> actually make.

I think you give this segment of our hobby too much credit <grin>.

There are always going to be folks who simply have no social skills or prefer not to deal with "kids". There will be people who enjoy building or experimenting, but they have no desire to interact with other humans. That's their prerogative.

It's a shame when they make newcomers feel unwelcome, but it's going to happen in any group. Other members in the group must compensate.

> The core value of Amateur Radio is "radio for its own sake". Some

Spreading the word is more important these days than ever before. We can't expect people to become interested in something that they don't know exists.

> Oddly enough, a lot of the young hams I have met are fascinated by
> Morse Code, simply because it is unique and outside their experience.
> That doesn't mean it's the only thing to show them, or that all new

But CW is new to them. It's different. Unique.

Ham radio is never going to appeal to everyone. Never has; never will. The majority of people, young and old, tend to go with what has the interest of the mainstream. Hams have always been somewhat "different", and the hobby has always appealed to a segment of the population that wasn't interested in doing whatever the fashionable thing might be at the moment.

> Some ideas:
>
> 1) Presentations at the middle-school and even elementary-school level

Getting the teachers involved would be ideal. Teachers are an incredibly important influence on their students.

> 2) Identify local hams who are available to be Elmers. (I suspect that

This is indeed key. It's what made the hobby so important for me as a younger ham.

And the help to actually put it together.

I do think this is the most important aspect. I'm not suggesting that we coddle people simply because they are young, or fawn over them. But we should give them the opportunity to contribute as equals, with appropriate encouragement and assistance. Breaking into the "old boys' network" can be impossible if the old boys don't make an effort to be inclusive.

73, Steve KB9X

What's interesting to me, is the "vintage" of those "elitists". With a few exceptions they are usually not "old timers" or "newbies" but rather those licensed in the 70's through about 1988 or so. These are the ones who posture about "purity of the ham race" and look down their nose at any ham who "isn't like them". They are, by and large, products of the incentive licensing system with it's fragmentation of the hobby into exclusive ghettos, reeking of "status" and "rank" and "I can beep faster than you can beep".

When I got into this hobby, you got no special call sign, no special status, no special band segments, the callbook didn't show your class, and nobody could poke around the QRZ.COM website to check your "status". All of us, >ALL OF US<, exuberantly played in the ether as equals, and nobody gave a rip if you

were a Conditional, General, Advanced, or Extra. You were a ham - PERIOD! I
think that's what makes us old-timers more accepting of those who "don't act
just like us".

73, de Hans, K0HB

Can your Yaesu do single sideband on 440 MHz? Same issue.

Convince Motorola - who now owns Yaesu - to make an adapter. Up to now, no one has made and sold such things except Icom. It's not like Pactor III which is in fact proprietary and no one can make adapters except SGS, the patent-holder.

You have to admit that there were always things which looked like a lot
of fun. In our day it was guitars, skateboards, stereo equipment,
photography, sports and GIRLS. Not many of us were exposed to amateur
radio in terms of percentages of young people.

> I had a good buddy when I was that age who was interested in radio and
> electronics, and peer pressure being what it is, I followed his lead.
> Those people are fewer these days.

I had an old Zenith tabletop radio with shortwave which covered 5.5 to
18 MHz. I used it initially to listen to broadcast radio. Then I
discovered the shortwave broadcasters and finally the 40 and 20m hams
using AM. Luckily for me, I heard a ham who was in our town and he lit
the fire for me.

>> I think there is a sense that, back in the Old Days, there were young
>> hams (high school and younger) all over the place. In my experience as

> mostly a hobby for older people, but I do think there were more young
> hams then.

There were lots of young hams and young SWLs who were interested in
becoming hams. They read Pop'tronics and EI. Most of the Novices I
worked were in my age group. K8CFT administered Novice exams to a
number of junior high and high school aged boys. At one time, the
little town of Oak Hill, West Virginia (population 7,000) boasted seven
young Novices along with six or seven higher class radio amateurs. Of
those seven hams, five are still licensed and active. One dropped out
of amateur radio and one (who was active) died last year. The key was
that *we were interested*. No one can make someone spend his leisure
hours doing something in which he has no interest.

>> There were a few curmudgeons back then who had no time for young hams.
>> But they were only a few. And a considerable number of young hams
>> dropped out because equipment was expensive, antennas were huge
>> compared to their houses, and/or they got interested in other things.
>

> A considerable number of old hams dropped out for similar reasons, sometimes providing a source of equipment for the new folks.

Quite a number of those who were teenage hams dropped out because of their interest in girls or cars or because they went off to college and had no room for antennas and rigs or no time due to studying. Many of them returned to amateur radio. Many got married and started families and returned to ham radio. Most never left amateur radio but their activity varied.

>> One big "hook", for me was that except for those few curmudgeons I was not treated as an inferior - particularly on the air. A big part of this was due to the mode I used - Morse Code. With Morse Code (and text modes), no one knows your age or gender unless you tell them. Operating skill, QSO content and signal quality established one's on-air reputation, not how deep or gravelly your voice was.
>
> This was a very important consideration for me, too. Even for the operation that I did on phone, by and large people treated me as an equal, and if I demonstrated skill they recognized that skill without regard to my age. Even in traditional in-person interactions like club meetings and Field Day operations, I was treated as an equal if I could demonstrate that I deserved to be treated that way. Generally speaking the local ham community was eager to reach out and teach me if it was obvious that I needed teaching.

In my first few years there was no real ham community in my area. I depended upon the support and largess of a number of individuals. A move to Miami in 1966 exposed me to amateur radio clubs--some of them quite large. I can't think of many areas where a young person can be treated as an equal by a banker, an attorney, a doctor, the fellow who runs the local water company or the man who operates his own gas station.

> I can't think of another hobby where I could have gained access to such a community of people who were often peers of my parents.

Exactly.

>> To speculate wildly, it might be that one cause for curmudgeon-ness is the fear of what advancements/accomplishments the young folks might actually make.
>
> I think you give this segment of our hobby too much credit <grin>.

You never know when you might have a young Bill Gates visiting your amateur radio club.

> There are always going to be folks who simply have no social skills or prefer not to deal with "kids". There will be people who enjoy building or experimenting, but they have no desire to interact with other humans. That's their prerogative.

Thankfully, most of them aren't hams. Ham radio is all about interaction with other humans. I've met a few reclusive or squirrelly or curmudgeonly radio amateurs over the years, but their number is small.

> It's a shame when they make newcomers feel unwelcome, but it's going to happen in any group. Other members in the group must compensate.

I think that in a club situation the other members see it happening and do step in to balance things.

>> The core value of Amateur Radio is "radio for its own sake". Some folks get that, most do not. The task is to spread that word to all, publicize the wide variety of things hams do, welcome those who are interested, and help them with what *they* find interesting.
>
> Spreading the word is more important these days than ever before. We can't expect people to become interested in something that they don't know exists.

That's what I liked about the Jay Leno texting versus Morse piece of a couple of years back. It gave exposure to amateur radio in a fun way.

>> Oddly enough, a lot of the young hams I have met are fascinated by Morse Code, simply because it is unique and outside their experience. That doesn't mean it's the only thing to show them, or that all new hams must start out one and only one way. But it does mean we cannot assume young hams are only interested in "new" things.
>
> But CW is new to them. It's different. Unique.

You've got a point.

> Ham radio is never going to appeal to everyone. Never has; never will. The majority of people, young and old, tend to go with what has the interest of the mainstream. Hams have always been somewhat "different", and the hobby has always appealed to a segment of the population that wasn't interested in doing whatever the fashionable thing might be at the moment.

When I was licensed, I was living in a remote West Virginia mountain town. Long distance telephone calls were expensive. We received three TV stations only via cable. Listening to Bruce Bradley on WABC or Dick Biondi on WLS meant contact with the rest of the world. Books brought the world to my door and amateur radio meant that I could use a rather primitive radio station in my bedroom to contact another fellow operating from his basement in France, an outbuilding in Russia or a from a stucco house in Chile.

>> Some ideas:
>>
>> 1) Presentations at the middle-school and even elementary-school level - including the parents.
>
> Getting the teachers involved would be ideal. Teachers are an

> incredibly important influence on their students.

Think back: Some kids do everything the teacher tells them. Some kids
do everything except what the teacher tells them. I've had very good
teachers and I've had dreadful teachers.

>> 2) Identify local hams who are available to be Elmers. (I suspect that
>> some of the curmudgeon-ness is due to the fear of being expected to be
>> an Elmer).
>
> This is indeed key. It's what made the hobby so important for me as a
> younger ham.

I'll assist any young person who wants to become a ham--as long as they
don't call me an "Elmer".

>> 3) Subtle helps to prospective young hams, such as a ride to a club
>> meeting, Field Day or hamfest, the loan of a rig, the gift of a box of

> inclusive.

I think that most do make an effort to be inclusive and to show a
newcomer the ropes. Some of it has to do with the old boys. Much has
to do with the attitude of the newcomer.

Yes, just fine thanks.

I'd prefer to make one myself, except I'd have to buy an AMBE chip from
DVSI.  DVSI, being the patent holders, are the only ones who can make
them (without paying 6-7 figures for the license, and even then only in
hardware).  And that seems to me to make it just as proprietary as
Pactor III.

The difference is the level of exposure as a user. Today, every young
person is exposed to personal computers as a user, in the same way that
they are exposed to cars as a user. Most of them won't go past the
level of a user, but a few will turn into gearheads or into computer geeks.

> I had an old Zenith tabletop radio with shortwave which covered 5.5 to

> the fire for me.

That's my point. I, too, had access to a shortwave receiver and
followed much the same path that you did. That's much less likely to
happen today. Back then, people were exposed to radio as users. Today,
they're exposed to it via cell phones but they don't perceive it as
radio. Entering ham radio via the SWL route is very rare these days.

> There were lots of young hams and young SWLs who were interested in

> worked were in my age group.

Now that you mention it, I do remember working a lot of novices who were
in my age group. There weren't that many local hams who were as young
as me, but there were a lot on the air.

> K8CFT administered Novice exams to a
> number of junior high and high school aged boys. At one time, the

> hours doing something in which he has no interest.

Yes, but you can only be interested in something if you know it exists. If the option of finding out about ham radio via the SWL route has disappeared, how do young people find out that they have the option of spending leisure hours in ham radio?

I think that the best option to attract young folks into the hobby is to expose them at school. Doing that requires teachers who are at least amenable to the idea. I suppose that getting publicity into the channels that they use could work, but I'm not sure how to do that. I'm not even sure what channels to shoot for.

Another option is to attract older recruits. This has its own set of issues since someone who is busy raising a family and building a career may not have vast amounts of spare time to spend in a hobby.

But for me the bottom line is that it's important to attract people into the hobby to replace the folks who are leaving. As the ham population ages and declines, it becomes more and more difficult to find a critical mass of local hams to support things like the local club, FD operations, Skywarn, and anything that's not done on the air. This problem is especially evident in rural areas that don't have a large population to draw from.

73, Steve KB9X

Those things are part of daily life for almost everyone (in developed
countries) today.

But amateur radio has had that sort of competition for many decades -
it's nothing new.

>�I suspect that the vast majority of them have not been

IMHO, *that* is the Big Problem.

Here's one data point for you:

I graduated from high school in 1972. Middle class suburb of
Philadelphia, emphasis was on math and science. Out of about 5000
students (boys and girls in two side-by-side schools), there were
never more than a handful of hams. Less than a dozen in the four years
I was there (which covers 7 graduating classes. At any one time there
were no more than six hams in both schools.

Yep. But at the same time, there had to be a willingness to learn.

> I can't think of another hobby where I could have gained

And on a first-name basis, too. A bank president was "Joe", a respected MD was "Bill", a highly skilled professional radio operator was "Lou".

> skills or prefer not to deal with "kids".

That's true, but it's not what I was getting at.

What I have seen happen more than a few times is the case of a young amateur rising through the ranks very quickly, passing older and more-experienced amateurs on the way. Not just in license class (although the "incentive licensing" changes helped that) but in things like DXCC countries, code speed, contest scores, operating skills, new technology in use, etc.

While most hams are glad to see such things, I suspect that there were at least a few who did not like being bested at *anything* by young(er) folks. Particularly when it's in the area of skills.

> > hams must start out one and only one way. But it does

> > mean we cannot
> > assume young hams are only interested in "new" things.

> But CW is new to them. �It's different. �Unique.

Yes. it's new to them. But they rapidly recognize that it's not a new technology at all. Doesn't matter; it's the uniqueness that makes it interesting.

Uniqueness is a big deal to the young people I know. I clearly recall seeing the first Harry Potter book appear - and seeing it being read, in hardcover, by local kids as young as 2nd and 3rd grade. "Conventional wisdom" says that "kids today" would not read books, let alone buy them (or pester their parents to buy them), yet here they were doing just that. Because the stories are unique.

> Ham radio is never going to appeal to everyone. �
> Never has; never will.

Of course.

> The majority of people, young and old, tend to go with
> what has the interest of the mainstream. �Hams have
> always been somewhat "different",
> and the hobby has always appealed to a segment
> of the population that
> wasn't interested in doing whatever the fashionable
> thing might be at the moment.

I think it's much simpler than that. Some people like the idea of "radio for its own sake", others can't see the point.

That applies to almost any voluntary activity. For example, most golfers will never play at anything like a professional level. The game takes a considerable amount of time and expense, is dependent on season and weather, and even when you play really well only a few will ever know.

Yet lots of folks play, because it's not only fun but a challenge.

Same for sport fishing, target shooting, running marathons, and a variety of arts and crafts done for pleasure. In all cases the journey is as important (if not more important) than the destination.

> > 1) Presentations at the middle-school and even elementary-

> incredibly important influence on their students.

Agreed! But that requires a teacher who is a ham.

Scouting is perhaps the #1 source of new young hams

today, btw. Particularly boys. Scouting groups are
always looking for responsible adult leaders.

Sort of. A key factor is knowing just how little help to give.

clusive.

Agreed - and that includes being willing to delegate authority.

I will never forget being allowed to run the 40 meter CW setup
overnight on Field Day back in 1970. I was 16, a ham for three years,
and there I was with a Drake 4-line and good antenna on a hot contest
band. You can bet I learned a lot that night!

No, it doesn't. It only requires a teacher who is open to allowing
someone to help him/her, and a person willing to help.

I'd like to make a lot of things for myself but I have to buy patented chips from the license holders. AM radio isn't a proprietary protocol, but a lot of the parts used to make an AM radio are patented. You buy them only from people the licensee has approved.

Hi Mark,

Could you elaborate on the relationship of electronic parts to proprietary codecs for radios?

I think there is a little confusion here regarding proprietary aspects of electronics and radio concepts.

Any patents held on electronic components are patents to safeguard the makers methods of making them - not the concept of the parts. The resistors, diodes and other parts are basic electronic building blocks, and anyone can make those.

I could make a nicely functioning radio out of pencils, microscope slides, aluminum foil, scrap wire, an old oatmeal box, and If I really wanted to get involved, I could construct my own vacuum tubes and design and build a superheterodyne radio.

As long as I built them according to my own methods, and did not infringe on the methods used by a manufacturer, not one patent, nor intellectual property would be violated.

Another way of looking at this, is that I can go to the local Radio Shack, and buy a handful of components to build say, a blinking light. Maybe an IC-type 555, an op amp or two, and their needed peripheral parts.

My finished device is not owned by the companies that made the parts. If it is my original design, I can claim copyright on it.

Now on to the intellectual property of the D-Star codec.

D-Star uses this Codec, and it is proprietary.

If you do not use the Codec, you will not be able to use the D-Star repeater.

If you can use the repeater, you have the Codec.

This differs in many important ways from normal repeaters, and normal Codecs in use by Amateurs.

Examples of non proprietary Codecs are(randomoly picked except for D-Star:

SPEEX- lossy but good ro IRLP

FLAC - lossless

Proprietary codecs:

AMBE

The D Star Codec.

The ramifications of using each are important.

Amateur Radio has traditionally used open source whenever possible, because we also have a tradition of working on and improving those things that we work with. Examples are the PSK31 and RTTY modes. Amateurs are continually providing new and improved software for those. There are even multi PSK channel data transmission softwares out there.

A lot of PSK signals fit within the bandwidth taken up by one SSB voice transmission.

My experimenting with a particular PSK engine is usually based on going to the web, and downloading it. Most applications are free, but even those that have to be purchased, the whole sum is going to the developer.

Hypothetically, say a group of hams came up with a digital repeater using the SPEEX Codec. (SPEEX is used for illustration purposes only, it might not be the best choice)

Most of us would be able to either build or purchase an interface that would allow us to interface our radios to the computer, as software would be easily available to run them.

Hand helds would be easily adaptable, as there is no specific need for a computer, just the necessary software and hardware to turn an audio stream into a digital stream, in the same manner as cell phones do (they use a different codec, but the principle is the same.

I would note that there has not been a huge amount of work done by Amateurs in the VHF and up region as related to Digital voice. A lot of this can be ascribed to the fact that an SSB channel is already pretty narrow, so there aren't orders of magnitude gains to be made in conserving bandwidth. Another issue is that with digital signals, multipath can be a severe problem. Anyone who does doppler direction finding (I do) can tell you that at VHF and up, Multipath is a major problem. What might be a little whoosh or garble on FM without upsetting readability can sometimes just keep the digital system nice and quiet.

Now let us turn to our D-Star equipped repeater.

What will communicate with it:

Icom D-Star Equipment
Kenwood (a rebranded Icom, sold only in Japan
Moetronix Can hear and talk D-Star on the internet.

That is a pretty short list. One for all practical purposes You buy the equipment and you use it.

Do you know what the price for the AMBE Chip is in quantities of one? It may not even be realistic for an amateur to attempt to build one of their own.

Mike

The "leadership" of our ARES/RACES group are D-Star fanatics. They claim, though, that the ICOM equipment does have an FM mode to pass FM signals through. I have no idea how that works (dual detection channels?).

As I understood it, D-Star is a set of open protocols generated by individuals in the Japan Radio Club (or whatever the formal name is) and ICOM was the only one so far to implement them in hardware. If someone else wants to implement them, a good IP lawyer can steer them in the direction of non-infringement. A good (non-ham) friend of mine is the IP attorney for Nikon USA and he is always checking to see that the newest stuff proposed does not infringe patents by Canon and others, yet digital photography uses open standards that everyone implements in their own way.

One of our club members is the author of D-Rats (that's Star spelled backwards), a set of open-source applications for functionality of D-Star radios. There's nothing proprietary about what he is doing or its applications, and he comes out with updates weekly. I'm not a software person so I can't comment on hooks and APIs and such.

Hey, I would be a D-Star "nut" also were the radio fairy to deliver four dual-band mobiles and an HT on my doorstep one night. We'll leave the light on for ya'.

I've looked to see if such a thing (fm voice) exists within D-Star.
Could these folks steer us to some documentation? Here are the RF
modules I've found:

http://homepage.mac.com/rrucker/d-star/D-Star_repeater_modules.pdf

Do you know of any coordination or frequency placement issues involved
with opening a presumptive FM side?

You know that whole D-Star "repeater" is not a repeater issue, so
frequencies are opened up for it in repeater crowded areas. Those
frequencies would not be proper repeater frequencies for an FM repeater.

Do you know a reference for that action Phil? I've looked a bit on the
FCC site, but haven't found it yet. I think it was in 2006.

Does he have a website? I'd like to take a look.

> Hey, I would be a D-Star "nut" also were the radio fairy to deliver
> four dual-band mobiles and an HT on my doorstep one night. We'll
> leave the light on for ya'.

I'd be interested in experimenting with it. We just don't have a digital repeater for a long way around here, and the costs of putting one up just don't make it happen. It kind of reminds me of the old credit problem for young people.

Need a loan? You need a good credit rating
Need a good credit rating, you need to get a loan.. 8^)

Like you said, if the radio fairys were to drop a system off... 8^)

Michael Coslo <mjc5@psu.edu> wrote:
>As long as I built them according to my own methods, and did not
>infringe on the methods used by a manufacturer, not one patent, nor
>intellectual property would be violated.

Yes, by definition, if you don't infringe, you haven't infringed. You can build just about anything for personal use and not infringe.

>D-Star uses this Codec, and it is proprietary.

The digital voice part of D-Star uses a codec. The rest does not. The protocol is open and published. Certain parts used to implement the protocol are patented and sold only by a single source. When 741s were new, they were expensive and sole-sourced.

>If you do not use the Codec, you will not be able to use the D-Star
>repeater.

I'm not sure you are correct about that.

>This differs in many important ways from normal repeaters, and normal
>Codecs in use by Amateurs.

If you don't have an FM radio, you cannot use an FM repeater.

Just as you can build your own copies of patented things for personal use, as you mentioned earlier, you can build your own copy of an AMBE codec for personal use. TI won't tell me how to build a 741 IC; AMBE is under no compulsion to tell you how to build their codec. If you buy one and reverse engineer it, that's fine -- for personal use.

>Amateur Radio has traditionally used open source whenever possible,

Airmail and Winlink 2000 are two very large obvious counterexamples. The firmware in a KPC3+ another. The firmware in the repeater controller I had to reverse engineer to make usable, ditto. It is common for ham applications to run only on Windows -- the epitome of closed source. The control and programming software from Kenwood for the D700 is -- closed source windows only. Look around at all the Motorola gear in use in ham radio. I've yet to see an open-source version of ANY of the programs required to program a Motorola.

Yes, there is open source for many things. No, it's not always used. The "tradition" is limited.

>Now let us turn to our D-Star equipped repeater.

>What will communicate with it:
>
>Icom D-Star Equipment
>Kenwood (a rebranded Icom, sold only in Japan
>Moetronix Can hear and talk D-Star on the internet.
>
>That is a pretty short list.

A very incomplete list, I believe. And, at an early stage of development, not unexpected.

>One for all practical purposes You buy the equipment and you use it.

For all practical purposes, 2m and 440 are "you buy the equipment and you use it". I don't know many people building their own HTs, and even those that did used the Heathkits. For most commodity ham uses, homebrew is rare.

>Do you know what the price for the AMBE Chip is in quantities of one?

About $200.

>It
>may not even be realistic for an amateur to attempt to build one of
>their own.

The ID-1, last I looked, is $1000. About. The IC-V92AD is about $600. An SDR is on the order of $1000 and up. A lot of bleeding edge components are a bit spendy. Ham radio experimentation is a spendy hobby.

Hello gang,

Just got a new computer (need a new HF station to go with it too LOL) and am connecting up to newsgroups. Looks good so far. Took me until 2:00 AM the day I received it as I had to clean out the computer room (orders) and then found out the thing does *not* like my USB 1 or 1.1 devices. Ethernet took care of the USB on the DSL modem.

Along with a nice day here, a new job, new computer and some friends stopping over, things couldn't be much nicer in these parts.

Hope everyone else is having a decent day.

73 from Rochester, NY

Hello Jim, good to see you here!

I know what you mean about the USB business, The newer stuff doesn't
like the older stuff, and most (maybe all) Ham equipment still uses
Serial. So I have to get a USB-Serial converter.

My brand new TS-480 is that way. It will probably be a while before the
Manufacturers catch up, after all, USB has only been around since 1995
or so. ;^)

Hello Mike,

Now all I need is a good CW key to USB converter ..... :)

I've got a few 12AX7s, one 12AT7, and a couple of 12AU7s. Got any schematics for a converter using them? :))

Seriously, I am trying to get everything together on this end. I need a few e-mail addys (you know what I mean) as I've nothing in the compooter LOL. I'm about to try the Kodak digital camera .... USB 1.0 .... I think I've got to get another camera. That thing is USB 1.0 and methinks that the newest operating systems consider them about equal to ISA busses :)

All kidding aside, folks cannot possibly know how much is offered in amateur radio. One has to get interested and go beyond - well beyond - the tests. If it sparks an interest, the sky is the limit. I keep reading QST and the Radio Amateur's Handbook. I enjoy the articles. When the VA put me on to a possible job, I went and applied. There was a test attached. Fill in the blanks. Simple schematic *symbols*. All were easy for me. Grounds, capacitors, crystals, inductors. But you'd best be able to identify transistors. Not just NPN and PNP bipolar transistors, but N-channel and P-channel JFETs as well as enhancement mode and depletion mode IGFETs. Simple enough so long as you get hooked with the ham radio virus LOL.

It seems so silly to argue over who is 'qualified' as a ham. Darn, the purpose, at least to me, is to introduce folks to communication and electronics. Let everyone take it from there.

So long as we treat each other with respect, we may well get the opportunity to 'infect' some more youngsters with the bug. And get them to progress. Get a degree in electronics or physics, or at least get involved as a technician. One never knows what ham radio can lead to. I've had the good fortune to see what ham radio can do. I believe it was in 1968 that Hans (K0HB) and I re-established communications between Saipan and Guam. The Navy had a problem. The hams got the comms going. And I'd be happy to serve again with Hans in the lead. Never argue with a chief - especially a *master* chief. He is one heck of a guy. We both did what we had to do.

Life is too short, my friend, to let animosities get in the way. D@mn the torpedoes, full speed ahead!

73 from Rochester, NY
Jim AA2QA - Vietnam vet and thankful to have had Hans at the other end of the circuit way back when sparkplug, sparkplug1, and KG6AAY hooked up on 75 meters. Kilo Golf six All American Yankee

Amateur Radio Newsline(tm) Report 1607 - May 30, 2008

Amateur Radio Newsline report number 1607 with a release date of Friday, May 30th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Russia launches its RS-30 ham radio satellite. The FCC says it will soon clarify what a repeater really is, no new subbands on 2 meters for digital voice operations, a quick look at what was new at Dayton and the Anchorage Hamfest says to "come on up!!" Find out more on Amateur Radio Newsline(tm) report number 1607 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: RUSSIA LAUNCHES RS-30

Ham radio has a new bird in the sky. Bill Pasternak, WA6ITF, has the details:

--

Russia has successfully orbited a new ham radio satellite called Yubileiny. Also designated as RS-30 the bird's CW beacon is operational on 435.315 MHz with reports of other signals also on 435.215 MHz as well.

At the time of writing it is still not clear if RS-30 is carrying a linear or FM transponder. It does appear to be in a 1500 km orbit which would give a pass time of up to 20 minutes and enable stations over 7000 km away to be worked.

Work on the satellite started in December 2004 with the intention of launching it in 2007 to commemorate the 50th anniversary of the first satellite Sputnik-1.

We will have more ham radio space related news later on in this weeks Amateur Radio Newsline report.

From the studio in Los Angeles, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.

--

A full report on the satellite with pictures can be seen at
www.npopm.com/?cid=242
(ANS)

RESCUE RADIO: HAMS SUPPORT CHINA EARTHQUAKE RELIEF

Ham radio post quake rescue operations are continuing in China. Jim Linton, VK3PC, of the WIA News is in Forrest Hill, Australia, with the latest update:

--

Situation report on China earthquake

The Chinese Radio Sports Association is quietly very pleased that radio amateurs in its country have been a key part of the rapid government-led response to the big Sichuan earthquake.

The death toll climbs daily with many thousands still missing and five million left homeless following the 12th of May quake. The extensive disaster recovery work that includes disease prevention measures, providing food and shelter will continue for some considerable time yet.

What is now emerging are more details of how radio amateurs swung into immediate action to provide emergency communications.

Clearly, when the IARU national radio society CRSA asked in the early days for three designated HF frequencies to be kept clear, those frequencies were being used for urgent traffic.

Fan Bin, BA1RB, on behalf of CRSA, said the society expresses sincere thanks for the cooperation around the world to free up those frequencies, and acknowledges having received inquiries and �warm concerns' of amateur radio societies worldwide.
.
As the disaster response begins to lessen in intensity, government officials and the news media such as the China Central Television have given recognition that amateur radio amateurs stepped in to provide vital links.

The TV service in a news report said that when all other communication means failed, amateur radio operators came out to provide valuable first hand information from the centre of the earthquake disaster.

This included an HF link for the Red Cross from the disaster area back to the nation's capital city of Beijing, enabling that aid agency to do its essential humanitarian work.

In other action, Luo BY8AA continuously coordinated VHF/UHF communications for a 100 km radius from Chengdu, the capital of southwest China's province of Sichuan.

More repeaters were set up in two other cities that are among the worst hit areas outside the epicentre, to form an effective amateur radio communication network.

In another report two ham radio operators drove to the centre of the earthquake area and had a repeater set up by the morning of 13 May just hours after the disaster hit.

Their repeater enabled the transmission of rescue instructions, status reports and was a main communication channel for public use when telephone services were down.

Among the traffic that repeater carried were communications for the Mayor of a city, who gave his orders to those on the front line rescue and recovery activity, and to receive up to date situation reports.

A fuller story on the role amateur radio played in China's worst earthquake disaster in 58 years is expected later this month but there's no doubt the individuals involved did their very best under extreme conditions that included hundreds of after-shocks.

Now closing this report with an acknowledgement of information provided by Fan Bin BA1RB, this is Jim Linton VK3PC, Chairman of the IARU Region 3 Disaster Communications Committee, for the Amateur Radio Newsline.

--

Meantime the Southgate news reports that radio amateurs in Hong Kong have been sending much needed supplies to assist victims of the Sichaun, China earthquake that occurred almost three weeks ago. The Chinese Radio Sports Association website said that on May 18th members of the Hong Kong Amateur Radio Communications Association - VR2HAM - donated a second batch of food, medicine, communications equipment and other materials to the ongoing disaster relief efforts. (VK3PC, WIA News, Southgate News)

**

RADIO LAW: IS IT A REPEATER OR IS A DUCK A DUCK

Back in the United States, the FCC says it will soon answer the question of when is a repeater and when might it be is it something else? That's what the Northern California Packet Association wants to know and it has filed a request for clarification that asks the FCC define what it means by the term simultaneously as it is used when defining what a repeater is. According to the FCC's Bill Cross, speaking at the recent Dayton Hamvention FCC forum, this question is the result of some folks who claim D-Star repeaters are not repeaters by virtue of their inherent analog to digital and digital to analog lime lag:

--

Cross: "The Northern California Packet Association has filed a request for clarification that the FCC define what is meant by the term simultaneously as it is used when defining a repeater.

"The issue here is that in California, D-STAR repeaters have been coordinated on channels that are set aside for auxiliary stations, on the basis that, because there is a delay in retransmission of the signal, the retransmission is not simultaneous, and therefore the repeating station is not a repeater.

"Others have advanced what he calls "the duck argument: If the station looks like a repeater, if it functions like a repeater, and it sounds like a repeater, it should be treated as a repeater -- and confined to the repeater subbands.

"A decision on this will be coming shortly."

--

The applicable rule that Bill Cross seems to be referring to is section 97.3, subpart 36. It defines a repeater as an amateur station that instantaneously retransmits on a different channel the angle-modulated phone or image emission transmission of another amateur station.

But this rule was written before the advent of digital audio systems that by their very nature have some inherent delay. Whether or not the FCC will strictly adhere to this definition or modify it to meet current technology could well determine the future of digital audio repeaters. Bill Cross says that a decision on this issue will be coming from the Commission in the not to distant future. (ARNewsline)

**

RADIO LAW: DON'T ASK THE FCC TO RE-REGULATE HAM RADIO

If there was one lesson that came out of the FCC Forum at the recent Dayton Hamvention it is not ask the FCC to re-regulate any aspect of the service because its just not going to happen. Case in point, the recently denied petition filed with the agency by Mark Miller, N5RFX. The FCC's Bill Cross says that the rules now in place are more than adequate to minimize interference from digital operations to other existing modes:

--

Cross: "The request that we limit the subbands for automatically controlled digital stations are permitted to transmit on to only those specified in (Part) 97 is curious because the rules as they are today limit transmissions from these stations to a bandwidth of no more than 500 cycles or Hz. on frequencies authorized for RTTY and data emissions outside of the automatically control subbands, when a locally or remote controlled station is interrogating that automatic station. If the idea behind this request was to limit these stations to the subbands to minimize interference, we were not persuaded that limiting stations that were transmitting in response to interrogation by a station where there was a control operator present would cause increased interference because these stations are already limited to a 500 Hz. bandwidth."

--

In other words, the technology of tomorrow is about here and its up to all of us in the ham community to learn how to introduce it and how use it without the help of the FCC. (ARNewsline(tm))

**

RADIO LAW: NO NEW SUBBANDS FOR DIGITAL VOICE

At the same time, the FCC made it clear that its not going to make specific spectrum available for digital voice relay operations. This after the agency recently turned away a petition from two California hams who wanted the creation of an additional 300 kHz wide subband for D-Star and other digital voice operations on the two meter band. Again Bill Cross, W3TN:

--

Cross: "The third item that came out had to do with 2 meters. We received a request from two hams out in California. What they wanted was for us to (allow) a little more spectrum -- 300 KHz -- to be authorized for repeater stations. Currently, repeater can use 3 of the 4 Mhz in the 2 meter band. They claim that additional spectrum is needed for repeater stations because some amateur repeater stations have begun (using) certain digital communications protocols and digital voice operations that are incompatible with the existing analog operations because digital voice users are unable to determine if the desired frequency is in use by An analog station. Inadvertently, they say, digital systems can cause harmful interference to analog systems. They also claim that coordinating groups have been unable to separate analog and digital voice repeater operations because the available repeater spectrum on the 2 meter band is fully occupied by existing analog systems.

Now, as I mentioned, repeaters are prohibited from using two 500 Khz segments of the 2 meter band in order to minimize harmful interference to other amateur service stations. Believe it or not, some licensed users use 2 meters for things other than repeater operation. The petition was turned down because their request would likely result in increased interference to other operations such as Packet, moonbounce, and simplex type operations. .

--

So how do you make room for digital voice repeaters where no channel pairs are available? Cross says that's up to the ham community and the nations frequency coordinators to work out and not the job of the FCC.

Cross also came down on those hams who hold a coordination but have no system on the air. He stopped short of directing that coordinators act to free up channels where a coordination exists but their is no repeater using it. None the less his message to the coordination community and to those who have repeaters only on paper came through loud and clear. (ARNewsline(tm))

**

RADIO LAW: UN-NEEDED PETITION LAUNCHED OVER INDUSTRY CANADA MISTAKE

A strange story out of Canada where mis-information on the part of one of that nations telecommunications regulators lead to an un-needed petition from the ham radio community. One asking that nations political leaders to force Industry Canada to resume regulating the nations ham radio operators, even though it had never stopped doing so. Here's what happened.

Back in early May, Eddie Pereira, VA3EDP, sent a letter to Industry Canada regarding interference complaints in the Canadian amateur radio service. The reply he received on May 13th from the Spectrum Management department in Toronto likely caught him off guard. It read, and we quote:

"The Amateur Band is self policing now because it has been de-licensed for the past few years. Industry Canada is no longer the regulatory body overseeing the Amateur Band operation."

This response did not sit well with VA3EDP, and he decided to do something about it. His action came in the form of that on-line petition to Canadian Parliamentary leaders that urged them to force Industry Canada to resume regulating the Canadian amateur radio service. The petition garnered close to 300 signatures in its short life. Some from real heavyweights in Canadian ham radio politics.

Well, you guessed it. The Industry Canada bureaucrat who had responded to Pereira's original information request was totally wrong. Industry Canada had not abandoned the nations hams and has no plans to do so. But it took intervention from Radio Amateurs of Canada to straighten it all out.

On May 20th Radio Amateurs of Canada contacted Industry Canada which confirmed that the information sent to VA3EDP was incorrect. In fact, the agency affirmed it is the regulatory authority for Amateur Radio in Canada.

VA3EDP has since received a message from the acting Director of Industry Canada's Toronto office confirming that the original unsigned e-mail was sent in error. He says that he will be meeting an official of the Industry Canada in the near future to discuss a spectrum management issue that was the cause of his initial inquiry with. (RAC, others)

RESCUE RADIO: GAREC 2008 TO BE HELD IN GERMANY IN JUNE

The fourth Global Amateur Radio Emergency Communications Conference, GAREC-2008, will take place on June 26th and 27th in Germany. This, in concert with the German HamRadio 2008 convention that begins on the 27th of June at the Conference Center of the Friedrichshafen.

GAREC-2008 will focus on the co-operation among IARU member societies and with specialized groups working on emergency communications in the Amateur Radio Service. The event is being organized by the IARU Region 1 Emergency Coordinator, Seppo Sisatto, OH1VR. Working with him ias the same team that has already put on the highly successful GAREC Conferences in Tampere, Finland, in 2005 and 2006. (Southgate)

**

RESCUE RADIO: DELAWARE ARES GROUP RESPONDS TO MAJOR STORM

Back in the USA, Sussex County Delaware ARES sprang into action on Monday May 12th, This as a major late season storm strained resources in the states coastal region.

As wind gusts were clocked in excess of 60 mph and inches of driving rain blanketed the area, Sussex County ARES activated its' Emergency Radio Network.

Beginning at 09:50 hours the group began providing eyewitness reports of weather, flood and traffic conditions throughout the county. Some 32 members worked for hours reporting power outages and road closures due to flooding and debris. (eHam)

**

ON THE AIR: USPS AND ARRL SPECIAL EVENT

To help kick off the 2008 North American Safe Boating Campaign, the United States Power Squadrons will hold a special event June 7 and 8 at the Hiram Percy Maxim Memorial Station. That's W1AW at American Radio Relay League headquarters in Newington, June Connecticut.

The United States Power Squadrons and the ARRL have been working together for the past several years on these campaigns. The ARRL shares in the Power Squadrons' commitment to education, safety and public service. It has been promoting boating and marine electronic education and seminars.

The W1AW special event station will broadcast from 1200 to 2400 GMT on frequencies 3.99, 7.29, 14.29 and 21.39 MHz for single side band phone. The station will also use digital modes PSK31 and RTTY. (USPS - ARC)

DAYTON WRAP-UP: THE LITTLE BIT OF NEW GEAR

If those attending the recent Dayton Hamvention were hoping that a bunch of new gear would be introduced this year, they would have been very disappointed. Burt Hicks, WB6MQV, in the newsroom with more:

--

While 2007 had a load of new product introductions, 2008 can best be described as a year of tweaking and improving what was shown 12 months ago. That's not to say that there were no new products -- just not very many and nothing really upscale. And unfortunately, nothing that could be classified as earth shattering.

On the high frequency transceiver front Icom did show its soon to be available IC-7200. This unit is being billed as a robustly built transceiver providing coverage of H-F amateur bands plus 6 meters and housed in a box that should be of interest to those who are involved in on-the-go emergency communications.

While Icom does not say that the IC-7200 is waterproof, it notes that extra design steps have been applied to the front panel buttons and knobs. This provides a measure of protection against water intrusion.

Power out is the customary 100 watts. Features include D-P filtering, digital twin pass band tuning, manual notch filter, keypad entry, dual VFOs, voice synthesizer, 200 memories, attenuator, RIT, scanning, 1 Hz tuning and even a USB port on the rear panel. Taken together these features are perfect for those first responders needing the ability to do electronic messagingvia an HF network from a USB connected laptop.

For the crowd on 6 meters and above, the only new item was a quad-band H-T from the folks at Vertex Standard. The latest in its Yaesu brand V-X line, the new VX-8 can transmit and receive in the 50 to 54, 144 to 148, 222 to 225 and 440 to 450 MHz bands. Its submersible design makes it practically an air tight unit that includes a built-in dual speed packet modem with APRS support along with Bluetooth and GPS options. Included are all the other bells and whistles that the very popular V-X line has become famous for.

And from a major supplier hardware standpoint, that was it.

If there were any big losers it was those who are waiting for a second source for D-Star transceivers and HTs -- in the hope that would bring competition and possibly drive prices down.

But no other company showed up at this year's Dayton with a D-Star compatible radio. And so far, it doesn't seem that there is any interest on the part of any of any other company to enter the D-Star field.

So for now it seems that only Icom plans to support D-Star in North America. Because of this, one could assume that prices will likely remain unchanged or even go up. And if that happens it will not be Icom's fault either. With the weakening US dollar vs. the strengthening Japan Yen, the actual cost for electronic goods made in the western half of the Pacific Rim may very likely see a significant price hike in the months to come -- as will much of everything else made outside of the U.S.A.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, at the studio in Los Angeles.

--

Oh yes, if you want to get a good visual idea of what this years Dayton Hamvention was like may we recommend that you view two free videos. Both were produced by our friend Joe Eisenberg, K0NEB, and are up on the YouTube dot com website. One is titled All Night Long and the other Joe calls Lean on Me. Just search on YouTube Hamvention 2008 and K0NEB to find them. (ARNewsline(tm))

**

THE SOCIAL SCENE: HALL OF SCIENCE HAMFEST IN NYC JUNE 8

The Hall of Science Amateur Radio Club Hamfest will be hold June 8th in the New York Hall of Science parking lot. That's in Flushing Meadow Corona Park in Queens, New York. Admission is by donation. Vendor set-up begins at 7:30 a,m. with the doors opening to the public 9 a.m. local Ewastern time. Amenities include ample free parking,, QSL card checking and more. Talk-in is on the 145.270 MHz repeater and requires a 136.5 sub-audible access tone. For more information e-mail Stephen Greenbaum to wb2kdg@arr1.net or visit www.hosarc.org on the world wide web. (Via e-mail)

**

HAM RADIO IN SPACE: CHINA TO LAUNCH NEW HAMSAT IN 2009

AMSAT says that China will likely launch a new ham radio satellite in 2009. The ham radio space agency says that it has received a report from Michael Chen, BD5RV, that indicates the CAS-1 amateur radio bird has completed its IARU frequency coordination and the hardware has been finished.

The payload of CAS-1 will likely include a CW telemetry beacon, a linear transponder, an FM repeater and a digital store and forward transponder. These operations will use 2 meters for uplinks and 70 centimeters for downlinks at 500mW output power.

The satellite is expected to be launched from China into a sun synchronous orbit with a 670 km apogee. According to Chen the CAS-1 team is waiting for another payload to be finished before launch date is officially set. (ANS)

**

HAM RADIO IN SPACE: CALL IT DO-64

AMSAT's Bill Tynan, W3XO has announced that the Delfi C-3 amateur aadio satellite has been issued an OSCAR number. From this point on Delfi-C3 OSCAR-64 or Dutch OSCAR-64 will be known simply as DO-64.

This newest amateur satellite was developed by a team of some 60 students and facility members from various polytechnic schools in The Netherlands. It was successfully launched April, 28th from India aboard a Polar launch vehicle and was successfully commissioned.

Currently DO-64 is transmitting telemetry on the 2 meter amateur band. In addition to its 2 meter downlink, the new bid has an uplink on the 70 cm band. (ANS)

**

HAM RADIO IN SPACE: AN INTERMITTANT AO-16

AO-16 Command Station Mark Hammond, N8MH, says that over the last several days you are likely to have found the AO-16 ham satellite silent. According to Hammond, there appears to be something in the spacecraft shutting down the transmitter after a short, random period of time.

Hammond says that it does not appear to be a battery related issue. Rather current speculation on the problem includes a temperature issue that has reared its ugly head now that the eclipse periods are increasing and the spacecraft internal temperatures are decreasing.

For the moment, ground control stations will manually turn the satellite on and then configure it for voice operations. This is a manual process and command stations are limited to the East coast of the US. Hammond says that only time will tell if the current situation will stay the same, improve, or get worse. (ANS)

**

DX

In DX, word that DL6ZFG will be active portable I-S-Zero from the island of Sardinia until around June 10th. He plans to work all popular modes concentrating on PSK, RTTY, CW and also SSB. Listen out for him mostly on 20, 30 and 40 meters and QSL As directed on the air.

And DL2AAZ, will show up portable V4 using the call 9H3TI from Nevis. He plans on using CW and SSB on 80 through 10 meters through June 15th. QSL via DL2AAZ, either direct or via the bureau.

Also, WA3FPK will be in Rwanda until the 5th of June. He has been issued the callsign 9X0A and plans to be active in his spare time, mainly on 20 meters SSB. QSL via KA1CRP.

Members of the South Flanders DX Activity Group will be active from June 5th to the 9th ON6JUN slash P from the Pegasus Bridge memorial museum. This, as a DX-pedition commemorating World War 2 D-Day landings. Operation will be on all HF bands using CW, SSB, RTTY and PSK. QSL direct or to the bureau via ON5SD

AA8YH, says via the Ohio Penn DX Newsletter that ne will be returning to Tunisia in mid-November for a 5 week stay. He plans to concentrate on the lower frequency bands is willing to accept skeds from QRP stations, Either on CW or SSB. You can contact him via his \e-mail address listed on QRZ.com.

Lastly, SP9PLK, the club station of the 2nd Mechanized Corps of the Polish Land Forces, will be active as HF9GA from the 2nd to 30th of June. QSL this one via SP9PLK.

(Above from various DX news sources)

**

THAT FINAL ITEM: COME NORTH TO ALASKA IN AUGUST

Finally this week, we all know that there are a lot of good hamfests out there, but very few that put out radio spots designed to invite the public to come on down. Or in this case its come on up. Up to Alaska for the Anchorage Hamfest. Take a listen:

--

Audio only - hear it in the audio version of this newscast downloadable in mp3 form at www.arnewsline.org

--

That's Pete Summers, KL2GY, who is the voice of the Anchorage Hamfests radio spot. And in addition to Pete's contribution, the Anchorage Hamfest will have loads of other activities to make the trek to America's last frontier a memorable outing.

Again the dates are August 1st to the 4th at the Anchorage Sheraton Hotel. And as Pete says, to learn more just take your web browser to www dot akhamfest dot com and be ready for a lot of ham radio fun in America's

49th state. (KL7SP)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

Before we go, please note that by the time most of you hear this newscast, the nominating period for the 2008 Newsline Young Ham of the Year Award will have closed. The cutoff was Friday, May 30th at midnight. All nominations are now in the hands of the judges. We should have the name of this years recipient in just a few short weeks.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Meachen,
ZL2BHF, saying 73 from down-under, and we thank you for listening.

Every evening on 3865 here in the northeast US there is what I believe to be a digital broadcaster.
The "noise" is a rasping sound, and it goes on all evening long, steady. Quite strong.

I know nothing about digital reception. Is there a way to decode this signal, by using my PC sound card and some software?

Rick K2XT

==> HAMS HEED THE CALL WHEN TORNADOES SWEEP THROUGH COLORADO

On Thursday, May 22 at approximately noon MDT, a large tornado touched down in northern Colorado near the town of Windsor. Windsor, with a population of nearly 19,000, is located approximately 10 miles southeast of Fort Collins, and 50 miles north of Denver. According to ARRL Colorado Section Manager Jeff Ryan, K0RM, initial reports indicated that there was the possibility of extensive damage. Ryan said that Colorado ARES District 10 was activated and David Markham, W0CBI, the Colorado Section Emergency Coordinator, monitored the situation.

The funnel cloud, accompanied by golf-ball sized hail, blackened the skies over Windsor as it knocked down power lines, shredded crops in fields outside the city and blasted whole neighborhoods; the southeast side of town was hit the worst by the storm. "It will be a long time before the town recovers from this," Windsor Mayor John Vasquez said.

Ryan said reports indicated the Windsor tornado was just one of several that swept across northern Colorado and part of Wyoming: "The storm resulted in one fatality, and more than 100 people were treated on the scene for some type of injury with another 18 people treated at area hospitals. Damage is widespread and includes homes and business in Weld and Larimer Counties. We also received damage reports from the smaller towns of Gilcrest and Platteville."

The Weld County Sheriff's Office reported that the lone fatality, Oscar Manchester, 52, a US Marine and Vietnam veteran, was killed in a recreational vehicle that was destroyed in the storm at a campground west of Greeley, about 60 miles north of Denver.

Colorado ARES District 10 Emergency Coordinator Randy Long, W0AVV, reported that 31 operators provided communications service to the Emergency Operations Center and Fire Department in Windsor, the Weld County Emergency Operations Center, the Larimer County Emergency Operations Center, the City of Loveland Emergency Operations Center, the Loveland Mobile Command post and two Red Cross shelters.

"On Friday, the town was still without power and remained so until local utilities could complete a survey of electrical transmission lines in the affected area that is expected to take up to 48 hours," Ryan said. "A mandatory evacuation for sections of Windsor is in effect due to gas leaks and downed power lines. The National Guard is on duty and is responsible for escorting emergency responders in and out of the area."

Colorado Governor Bill Ritter ordered the National Guard to aid rescue and cleanup efforts. He visited the town Thursday evening, saying the number of homes damaged was "significant" and declared a state of emergency for Weld County. Representatives from FEMA were on the scene conducting damage assessments. On Monday, President Bush approved Colorado's request for federal disaster aid to help with the costs of the storms and tornadoes, and declared Weld and Larimer Counties federal disaster areas.

On Friday, Markham placed an additional 15 Amateur Radio operators in Larimer and Weld County on standby in anticipation of an overnight shift; he also requested adjacent districts to prepare in support of the ongoing operations if necessary.

Windsor, Fort Collins and Loveland lie in the shadow of the Rocky Mountains, where the Great Plains give way to steep hills. "It's very unusual to see [a tornado like] this by a mountain range. It's kind of a freak thing," said Captain Steve Fleming of the Poudre Fire Authority.

Ryan said that at the peak of the ARES operation, "Colorado ARES District 10 had 55 operators supporting emergency response and relief efforts in the aftermath of the tornado that touched down near Windsor."

==> AMATEURS ASSIST WITH FLORIDA FIRES

Amateur Radio operators in Brevard County, Florida responded in a support role during a recent spate of wildfires that ravaged the towns of Palm Bay and Malabar. The fires, all of which were deemed "suspicious" by fire authorities, began on Sunday, May 11. Dubbed the "Mother's Day Fires," they burned close to 13,000 acres in southern Brevard County. Located about 25 miles east of Orlando, Brevard County is home to Kennedy Space Center, site of NASA's space shuttle launch area.

John Weatherly, AB4ET, and Clayton Bennett, KA4NHW, manned a 2 meter station in a shelter set up by the American Red Cross. Additionally, the Brevard Emergency Amateur Radio Services (BEARS) donated the use of their mobile command center to public safety agencies. The command vehicle, dubbed BEARS-I, was obtained through a $100,000 grant from the State of Florida. The interior was designed and built by a group of Amateur Radio operators from local Brevard County clubs that are members of BEARS. BEARS-I is outfitted with Brevard County 800 MHz public safety radios and amateur equipment.

BEARS-I was used as a command post in the weeklong operation. The Palm Bay Fire Department, the Palm Bay Police Department, ARES and Florida Power and Light manned the four operating positions. The unit was put in place at Bayside High School when the fires started; it was relocated the next day to the US Air Force tracking station that became the new command center, as well as the staging area for trucks and teams from other counties. BEARS-I was used as a self-contained command center around the clock for over five days

According to official sources, the Mother's Day fires destroyed more than 30 homes with an estimated value of $5.6 million, and damaged almost 250 residences. A man is in custody on three counts of intentional burning of lands after witnesses reported seeing him light several small fires one night that were quickly extinguished. According to authorities, the investigation continues into whether the suspect set all the fires, or if others were involved. -- Some information provided by Jan Heise, K4QD, and Dan Fisher, AI4GK

==> CHINESE OFFICIALS GIVE KUDOS TO AMATEUR RADIO OPERATORS

As disaster recovery efforts continue following the earthquake in the Wenchuan area of China's Sichuan province on May 12, China's Information Office of the State Council reports that the death toll has reached more than 67,000 persons as of May 27. Communications in some of the surrounding areas were cut off, and communications in some other areas experienced network congestion due to drastically increased traffic. According to the Chinese Radio Sports Association (CRSA) -- the Chinese IARU Member-Society -- Chinese government officials and the news media have recognized that when communications failed after the earthquake, Amateur Radio operators stepped in to provide vital links.

CRSA designated 14.270, 7.050 and 7.060 MHz for emergency communications use during the quake, but these frequencies are now no longer restricted for this use; should a severe aftershock occur, CRSA said it will make the call for them to be kept clear again.

On Monday, May 26, China Central Television (CCTV) reported that, "When all other communication means failed, Amateur Radio operators came out!An Amateur Radio emergency communication network was set up, and one of the commanders, Liu Hu [BG8AAS], called for Amateur Radio operators on air to provide services for disaster relief."

Fan Bin, BA1RB, on behalf of CRSA, said, "Thankfully, one main repeater survived during the earthquake. This repeater provided 100 km coverage to Mianyang. Amateur Radio operators from Chengdu, Shenzhen, He'nan went to the center of the disaster area, set up repeaters in Beichuan County and provided various valuable first hand information from the center."

CRSA officials said they hoped to report more detailed information on the role of Amateur Radio emergency communications in the big earthquake at a later date. In the meantime, Fan said, CRSA acknowledged that the main organizer of local Amateur Radio traffic, Luo Minglin, BY8AA, "continuously coordinated VHF/UHF communications for a 100 km radius from Chengdu, the capital of southwest China's province of Sichuan. More repeaters were set up in both Beichuan and Mianyang -- among the worst hit areas outside the epicenter -- to form an effective Amateur Radio communication network."

Zhang Zhen, BG8DOU, said that right after the earthquake, "Two ham radio operators drove to the center of the earthquake area and had a repeater set up by the morning of May 13. This repeater enabled the transmission of rescue instructions and status reports, and was a main communication channel for public use. The repeater carried communications for the Mayor of Mianzhu City who gave orders to those on the front line rescue and recovery activity."

The CRSA said it appreciates the support given by the Amateur Radio community in helping to keep clear the emergency communication frequencies of 7050 kHz, 7060 kHz and 14270 kHz during the critical period after the earthquake: "Thanks for the cooperation and efforts made by all Amateur Radio societies." The CRSA also acknowledged having received inquiries and the "warm concerns" of Amateur Radio societies worldwide. -- Information provided by Fan Bin, BA1RB, on behalf of CRSA, via IARU Region 3 Disaster Communications Committee Chairman Jim Linton VK3PC

==> ARRL FILES COMMENTS IN TWO MATTERS BEFORE FCC

On Tuesday, May 27, ARRL filed electronic comments concerning two matters that the FCC has under consideration. The first set of comments concerns a company that filed a request for a waiver of Part 90 of the FCC rules; ReconRobotics, an electronics manufacturer, wishes to sell, and for its public safety customers to use, a robotic device that operates in the 430-448 MHz band. The primary allocation in that portion of the spectrum is United States government radiolocation (military radars). The Amateur Service has an allocation on a secondary basis. The second matter deals with GE Healthcare and their request for allocation of spectrum (as a secondary user) in the 2300 MHz band; the Amateur Service has a primary allocation in a portion of the requested band.

On January 11, 2008, ReconRobotics filed a request with the FCC for a waiver of Part 90 of the Commission's Rules with respect to the Recon Scout, a remote-controlled, maneuverable surveillance robot designed for use in areas that may be too hazardous for human entry. This device can be thrown, dropped or launched into hazardous areas and can provide an operator located a safe distance away with video and audio, along with infrared, biological, chemical, heat, radiation or other data. According to the FCC, ReconRobotics seeks a waiver to permit equipment authorization of the Recon Scout, and its use by state and local law enforcement and firefighting agencies and by security personnel in critical infrastructure industries.

The FCC said a waiver is required to permit licensing of the Recon Scout because "the device operates in the 430-448 MHz band." ReconRobotics asserts that because the Recon Scout operates with 1 W peak power, it is "unlikely to cause interference to these services."

The ARRL contends that "Because [this device] operates on a channelized basis, each of the three channels being six megahertz wide, the necessary bandwidth of the device is apparently close to 6 MHz.

[ReconRobotics] asks that it be granted an unspecified series of permanent waivers to allow the marketing and sale to, and use of this device by law enforcement and fire department personnel for public safety applications. The Amateur Service, which has a heavily occupied, secondary allocation in the 420-450 MHz band...would be potentially substantially impacted by grant of these waivers."

The ARRL's comments also state that ReconRobotics "fails to establish that the 420-450 MHz band is the only viable choice and that no other band would be suitable; an obligation of the Petitioner in order to entitle it to a waiver." In requesting the waiver, ARRL asserts that ReconRobotics only claimed, but did not show, prove or demonstrate, that other bands were not suitable for its purposes. In other cases before the FCC as recent as 2006, the Commission denied such waivers, saying, "We do not believe that the public interest requires grant of a waiver merely to accommodate a manufacturer's choice of a specific frequency when others are available."

The ARRL contends, in its comments, that "nothing in the four corners of [ReconRobotics'] request indicates anything that would verify the factual conclusions offered. The waiver request boils down to 'trust us, we have checked into this.'"

The ARRL points out in its comments that there are differing amateur operations throughout the 420-450 MHz band. One of the channels ReconRobotics is requesting use of -- 442-448 MHz -- is used by amateur repeaters (with band plans varying by locality) and also for Amateur television repeater inputs. "These repeater inputs, both for voice and video, are at high locations where line-of-sight to [ReconRobotics] devices should be expected anywhere in the United States. Repeaters in this band are routinely used for emergency communications via amateur Radio for numerous served agencies including FEMA, and so at times when [ReconRobotic's] device may be expected to be used, the repeaters may be expected to be in operation in the same areas," ARRL comments state.

For this reason as well, the ARRL maintains that interference to [the Recon Scout] device may be expected on a regular basis from Amateur Radio operations: "While it is all well and good for [ReconRobotics], a manufacturer, to suggest that it understands that operation of the device would be subject to interference received from licensed users in the band, such interference is not a comforting thought for licensed radio amateurs who could very easily be perceived to be, or held responsible for the failure or malfunction of these analog devices in a given application and the danger to public safety officers who are relying on them. It is also too much to expect that a Public Safety licensee will understand that the use of the device is unpredictable because interference to the device is unpredictable. [ReconRobotics] is correct about one thing: Amateur Radio operators take their relationship with First Responders very seriously. Creating fundamental incompatibility between Public Safety communications and Amateur Radio operations serves no one well at all, and for this reason, [ReconRobotics] should reconfigure its device to operate in a different allocation."

The ARRL urges the FCC to deny the waiver request, "either permanently or even temporarily," and calls on the Commission to require ReconRobotics to "initiate a rulemaking proceeding if it feels that the Part 90 or Part 15 rules governing analog devices are not sufficiently accommodating and should be changed, and could be changed consistent with interference avoidance. Repeatedly granting waivers for analog devices which do not meet the fundamental interference avoidance requirements of the existing rules is bad spectrum management and ill-serves the Amateur Service."

In December 2007, GE Healthcare filed ex parte comments in response to a Notice of Inquiry (NOI) in the pending "MedRadio" proceeding, proposing that the band 2360-2400 MHz be allocated on a secondary basis for "Body Sensor Networks" (BSNs). These systems are apparently to be used for wireless patient monitoring. They are very short-range networks consisting of multiple body-worn sensors and nodes, connected via wireless to nearby hub stations at medical facilities and in homes. The Amateur Radio Service is currently allocated 2390-2400 MHZ on a primary basis.

In its comments, the ARRL states that it does not expect a "significant amount of harmful interference to Amateur operations at 2390-2400 MHz from BSNs." GE Healthcare's proposal, however, makes "erroneous assumptions about Amateur uses in these bands, and the interference potential of the devices to Amateur Radio stations in residential areas is not known."

According to GE Healthcare, they propose an allocation of the entire 2360-2400 MHz band for use of the BSN devices, but the ARRL contends that "in any given area, only 20 MHz of that band would be used. [GE Healthcare's] proposal specifically mentions Amateur Radio and claims that, because the band 2390-2400 MHz is 'designed [sic] for fast scan video, high rate data, packet, control and auxiliary applications' and not weak signal communications, it is well-suited for sharing with the BSN systems."

The ARRL argued that this is a misconception on GE Healthcare's part: "The fact is that there are no limitations on the type of Amateur uses to be made in these bands. The band may in fact be used in some areas for weak signal communications, on a completely unpredictable basis. The uses of this band by radio amateurs, though guided overall by a national band plan, are very much subject to local variation dictated by custom and usage. Weak signal Amateur communications utilize long propagation paths, very low received signal levels, and very high transmitted signal levels. The band is also used for long distance data, voice and television communications using relatively weak received signal levels."

The ARRL, in its comments, said it "is far more concerned" about potential interference to BSNs from licensed Amateur Radio operation in the 2390-2400 MHz band: "The ramifications of radiofrequency interference (RFI) to these systems in terms of danger to medical patients are obvious, and potentially severe." The ARRL contends "that the potential for interference from Amateur Radio operations, which are in this band occasionally itinerant and mobile, but most often fixed in residential areas, to BSNs operated at a patient's residence would be...a problem."

In light of the possibilities of harmful interference, the ARRL requested that the FCC "not proceed with the proposal of GE Healthcare as proposed in the 2390-2400 MHz band."

==> GET READY FOR THE UPCOMING ARRL JUNE VHF QSO PARTY

June is just about here, and according to ARRL Contest Branch Manager Sean Kutzko, KX9X, that means the VHF bands are starting to get some steam. "If you've never experienced the fun of VHF+ operating, the ARRL June VHF QSO Party is a great place to start. With many HF radios now offering at least 6 meter SSB/CW capabilities -- and some offering 2 meters and 70 cm as well -- any amateur with a Technician class license or higher can experience long-haul communication on the VHF bands," he said.

Known as the "Magic Band," 6 meters can be quiet for days at a time, and then suddenly explode with signals when the E layer of the ionosphere cooperates. There's no guaranteed way to predict when 6 meters opens, which is why the propagation mode is called "Sporadic-E." When 6 meters opens, contacts several hundred miles away can be made with relatively modest equipment; 50 W and a simple dipole antenna can do wonders during a good opening.

When operating on VHF, Kutzko said that your Maidenhead grid square is the common geographical information exchanged. For complete information on grid squares and how to tell what grid square you are in, visit the ARRL's web site <http://www.arrl.org/locate/gridinfo.html>.

Kutzko advises that there are a few things to know about operating on 6 meters: In the US and Canada, there is a "calling frequency" on 50.125 MHz USB. Many stations monitor this frequency to listen for band openings. Stations can call CQ on the calling frequency, and if somebody answers, the stations will find a new frequency on which to conduct their QSO. It is considered poor etiquette to monopolize the calling frequency for QSOs.

Most SSB activity will take place between 50.125 MHz and 50.250 MHz. If conditions are exceptional, Kutzko said you may hear signals above 50.250: "CW signals can be found from 50.100 MHz to 50.080 or so. The frequencies between 50.100 and 50.125 MHz are a 'DX Window,' meaning it is reserved for QSOs between W/VE and DX stations. Please do not make stateside-to-stateside QSOs in the DX Window."

Kutzko said that getting on 6 meters is easy: "A dipole for 6 meters is only 9 feet, 4 inches long and is an easy construction project. Try to get the dipole in the air as high as possible, but even 15 feet off the ground will make some QSOs. If you have an antenna tuner that can handle

6 meters, you can try loading up another of your antennas on 6 meters with reasonable success."

Because VHF+ antennas are relatively small, Kutzko said that many amateurs operate from portable locations, such as a hilltop or a campground. Others operate the contest as a "rover," operating from their car or truck while transmitting from multiple grid squares over the contest period. "Tracking rovers during the contest is almost as much fun as the contest itself," he said.

The ARRL June VHF QSO Party runs from 1800 UTC Saturday, June 14-0300 UTC Monday, June 16. Be sure to use those extra bands on your transceiver and get in on the fun you've been missing on 6 meters and up! For more information on this contest, please be sure to check out the Contest Rules <http://www.arrl.org/contests/rules/2008/june-vhf.html>.

==> FIRST ARRL BOOK PUBLISHED IN CHINA

The first of several ARRL books has been translated and published by Posts and Telecommunications Press (PTPress) of Beijing, People's Republic of China. "Getting Started with Ham Radio" by QST Editor Steve Ford, WB8IMY, will be available for purchase in China next month. Other ARRL books to be translated and published in the PRC include "The ARRL Handbook," "ARRL Antenna Book," "Experimental Methods in RF Design," "Understanding Basic Electronics" and "Ham Radio on the Move."

Posts and Telecommunications Press is one of the largest Chinese print and electronic media publishers. It is a specialized publishing house operating under the management of the Ministry of Information Industry. At present, PTPress annually publishes 3600 book titles in 10 categories such as communications, computers, electronics and electrical engineering technology.

"Getting Started with Ham Radio" was translated and adapted for its Chinese audience by Zhang Hong, BG1FPX.

==>SOLAR UPDATE

Tad "My Sun sets to raise again" Cook, K7RA, this week reports: This week we saw only one sunspot, number 997, and only on Memorial Day, May 26. Alas, this was another sunspot left over from fading Solar Cycle 23 and its appearance was very brief. One day it weakly emerged, it quickly faded from view. The previous five days were spotless; spots appeared on the five days prior to that, and previous to those spotted days were 10 days of no spots. Sunspot numbers for May 22-28 were 0, 0, 0, 0, 12, 0 and 0 with a mean of 1.7. The 10.7 cm flux was 69.3, 67.8, 68.5, 68.3, 68, 67.9 and 67.8 with a mean of 68.2. Estimated planetary A indices were 9, 10, 7, 6, 4, 3 and 12 with a mean of 7.3. Estimated mid-latitude A indices were 7, 7, 4, 7, 3, 2 and 10, with a mean of 5.7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's

Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend is Kids Roundup on May 31-June 1 and the RSGB 80 Meter Club Championship (Data) is June 2. Next weekend, the NCCC Sprint Ladder and the Digital Pentathlon are both June 6, and the Wake-Up! QRP Sprint is on June 7. On June 7-8, look for the DigiFest, the SEANET Contest, the UKSMG Summer Contest, RSGB National Field Day, IARU Region 1 Field Day (CW) and the Alabama QSO Party. The SKCC Weekend Sprintathon is June 8. The NAQCC Straight Key/Bug Sprint and the RSGB 80 Meters Club Championship (CW) are both June 11. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 8, 2008, for these online course sessions beginning on Friday, June 20, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* IARU Officials Meet in Newington: IARU President Larry Price, W4RA; Vice President Tim Ellam, VE6SH, and Secretary David Sumner, K1ZZ, with assistance from ARRL Chief Technology Officer Paul Rinaldo, W4RI, met in Newington this week. "We are preparing documentation to be discussed at the annual Administrative Council meeting, which will be held in Germany shortly before the Friedrichshafen Ham Radio exhibition in late June," said Sumner. ARRL staff members also took the chance to say goodbye to Rinaldo who is retiring after 25 years on the ARRL staff. "I look back on the great association over the past 25 years - in fact, earlier than that as a volunteer - and I hope to still be around," Rinaldo said. "I'm

going to stay involved with the IARU and go to some meetings in Geneva this October."

* New Name, Look for ARRL Contest E-Letter: The ARRL Contest Rate Sheet is getting a new look and name this week. Now known as the "ARRL Contest Update -- News and Techniques for the Active Operator," the biweekly e-letter geared toward contesters will be sent out in a combined HTML and text-only format (readers who prefer text-only will still be able to read it that way using most e-mail clients). The HTML format will present a more attractive newsletter that is easier to read, and photos and graphics will also be included for the first time. According to Contest Update Editor H. Ward Silver, N0AX, "We're going to start slow with a limited amount of HTML snazziness and a few photos. Please bear with us during the growing pain period and soon the HTML version will seem like the old friend that the text-only version has become." To subscribe to the ARRL Contest Update, please visit the ARRL Contest Update Web page <http://www.arrl.org/contests/update/about.html#get>.

* National Hurricane Center's WX4NHC Sets On-The-Air Station Test: The annual WX4NHC <http://www.wx4nhc.org/> On-the-Air Station Test from the National Hurricane Center (NHC) in Miami takes place Saturday, May 31, 1300-2100 UTC. "The purpose of this annual Station Test is to test all of our radio equipment, computers and antennas using as many modes and frequencies as possible. This is not a contest or simulated hurricane exercise. New equipment and software will be tested, and some operator training will also be conducted," says WX4NHC Assistant Amateur Radio Volunteer Coordinator Julio Ripoll, WD4R. He adds that WX4NHC also will be testing new computers and software as well conducting operator training. WX4NHC will be on the air on HF, VHF and UHF, plus 2 and 30 meter APRS. Suggested SSB frequencies are 3.950, 7.268, 14.325, 21.325 and 28.525 MHz, +/-QRM; WX4NHC reports that they will mostly be on 14.325 MHz and will make announcements when they change frequencies. WX4NHC also will be on the VoIP Hurricane Net 1700-1900 UTC (IRLP node 9219/EchoLink WX-TALK Conference) and on South Florida area VHF/UHF repeaters and simplex. Stations working WX4NHC exchange call sign, signal report, location and name plus a brief weather report, such as "sunny," "rain" or "cloudy." Non-hams may submit their actual weather using the On-Line Hurricane Report Form. QSL to WD4R and include a self-addressed, stamped envelope. Do not send cards to the NHC. Due to security measures, no visitors will be allowed at NHC during the test.

* US Power Squadron to Hold Special Event at W1AW: Members of the United States Power Squadrons Amateur Radio Club will operate celebrate the National Safe Boating Council's Safe Boating Week with a Special Event at, W1AW, the Hiram Percy Maxim Memorial Station June 7 and 8, 8 AM-8 PM (EDT) on both days. USPS operated from the station in 2006 and say they enthusiastically anticipate this return to Amateur Radio's flagship station. USPS plans on operating on or near W1AW's regular frequencies: CW -- 1817.5, 3581.5, 7047.5, 14047.5, 18097.5, 21067.5 and 28067.5 kHz; SSB - 1855, 3990, 7290, 14290, 18160, 21390 and 28590 kHz. A special QSL card is in the works and can be received by mailing a self-addressed, stamped envelope to W1AW.

* New Russian Satellite in Orbit: A Russian rocket launched from Plesetsk on May 23 carried a number of payloads to orbit, including a new Amateur Radio satellite named Yubileiny -- Russian for jubilee -- since christened Radio Sputnik 30 (RS-30). Operational details are vague at this time. Amateurs throughout the world report receiving signals at 435.315 and 435.215 MHz; some report reception of CW telemetry while others report what appear to be image transmissions from the satellite. RS-30 is orbiting at a maximum altitude of 1500 km, creating a substantial communications footprint below. The satellite will broadcast audio and video about the history of the Soviet and Russian space programs, as well as signals imitating those broadcast by Sputnik I in 1957. According to the satellite's launch team, "The motive for development of the Yubileiny small spacecraft was the 50th anniversary of the first space satellite. With the help of that satellite, the new space systems and equipment are expected to get flight qualification, and radio-amateurs all over the world will be able to receive information on the history of space development and domestic cosmonautics achievements."

===

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA,
k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during

registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Try:
http://n1su.com/windrm/ (ham-oriented)
http://drm.sourceforge.net/ (broadcast-oriented)

The wide-bandwidth (broadcast-oriented) DRM systems may require that you have access to a low-frequency-IF version of the signal, or tap out a 455 kHz IF and mix it down to around 10-15 kHz.

I believe that the narrow-bandwidth (ham-oriented) versions could use the audio output from a SSB receiver.

```

In theory, yes, the teacher doesn't have to be a ham.

But in practice, I think a teacher who was that interested in having ham radio in the school would *be* a ham, if for no other reason than it makes the whole thing easier.

--

A lot depends, too, on what level of involvement ham radio is to be in the school. For example, in increasing order of involvement:

1) Books, magazines and other info on ham radio could be provided to the school libraries.

2) Local amateurs could give a presentation/demonstration at an assembly, student activity day, etc. This would simply say "Here's what ham radio is, what hams do, what it takes to become one.." etc.

3) Ham radio could be introduced as an extra-curricular activity, same as computer clubs, robotics clubs, etc. (The local high school has a computer club that focuses on rehabbing older computers for use by

students who can't afford their own, and a robotics club that designs and builds machines for competition).

4) Ham radio could be part of the curriculum, integrated into the math, technology, communications and geography parts.

IMHO the bell-the-cat question at all levels is: Who's going to do the work, and pay the costs?

73 de Jim, N2EY

I know next to nothing about radio, but I wanted to share something (you guys probably already know about, but I was amazed).

I have a small Pogo pocket radio that will record AM and FM to MP3 files, and the problem is that the AM antenna is weak. I started looking on the internet for antenna boosters and enjoyed the antenna technology enough to try and make my own booster that operates on the principle of a resonating oscillator placed close to the Pogo ferrite antenna. This is just a tuning circuit with an adjustable capacitor and induction coil. Well I tried to be careful making the home-made coil and capacitor but I just did not get it right. Nonetheless it started me thinking that I had the same circuit in an old transistor radio. So I took the old radio (ferrite antenna) and tuned it to the station I wanted and placed it head-to head against the Pogo radio. The Pogo reception was boosted dramatically. So I do not need to buy a $50 antenna booster - a cheap $10 second radio will do the same thing quite well, and the second radio does not even have to be on.

Well, maybe this will give a few second hand radios a second life.

-DAC

The FM voice is not part of the D-Star specs. It is built into the
ICOM hardware. The IC-2820 dual-band dual-channel mobile comes
"D-Star ready" for $600 and the add-on D-Star module is another $200+.

I'd just as soon wait for the prices to come down.

No, the local coordinator handles that as any other frequency
coordination matter.

According to what I've heard, that's a "hot button" topic, but Bill
Cross of the FCC (an active ham) said at Dayton that he applies the
"duck test" to the D-Star repeaters (making them eligible for
automatic control).

That makes good sense to me.

As I understand it, some D-Star advocates are claiming that a D-Star repeater isn't a repeater, because the regs state that a repeater retransmits the incoming signal "instantaneously", and the packet delay in a D-Star system makes it not-instantaneous... that it's fundamentally a store-and-forward system, more like a BBS (albeit with a very short storage time).

That same line of thought (if valid) would seem to apply to a fairly high percentage of ham-radio analog repeaters on the air today. It's quite common to have a digital or bucket-brigate delay device in the receiver audio path, with the analog audio being presented to the repeater controller and transmitter some time (up to tens of milliseconds) after it was actually demodulated by the receiver. This can help reduce the chopping-off of the first part of the first syllable, and allows the transmitter to be un-keyed at the end of the transmission before the beginning of the squelch-tail noise burst gets out of the delay pipeline.

I can't recall hearing anyone argue that an FM analog repeater with an analog bucket-brigade (or even ADPCM digital) audio delay circuit was magically "not a repeater" because the audio retransmission was not "instantaneous". If the D-Star not-a-repeater proponents were to win their case, it might be a *very* pyrrhic victory, as analog repeater owners might also qualify to move into non-repeater frequency segments. Sauce for the goose...

Right. My thoughts on the whole thing are that with the Bizarre
"repeater that isn't a repeater" argument they couldn't run FM analog
because it would turn the "repeater that isn't a repeater into a
repeater that is a repeater."

Now repeat that ten times real fast! ;^)

Our repeater system uses several polling receivers at different sites.
(6 or 7 IIRC) The recievers transmit their received signals to the main
site. The main repeater site determines which is the strongest signal,
and sends that one through to the main repeater transmitter.

As you can imagine, there is some delay there too. Maybe 250 milliseconds.

One of the biggest problems putting up a repeater these days is that
many areas are just full. There's no room at the Inn. And the area in
which a D-Star is likely to do best is in those crowded areas. So they
tried to do an end run around the issue. Without a lot of thought.

Seems like we have a nice patch of bandwidth between 2 meters and 440
that is a bit underutilized?

Depends on the definition of "full" or the definition of "crowded".

I live in a metropolitan area in which there are no VHF pairs available for assignment. By some definition that might mean that the spectrum is "full" or "crowded".

But you could shoot off a cannon on 2M most of the time and it wouldn't hit a soul. Nobody. Not a signal to be heard. Some days you can scan every channel in sequence for hours on end with not a peep heard. Then go to each QRG in sequence and transmit "K0HB LISTENING". Nobody home.

I travel a lot, to large cities like Chicago, Milwaukee, St. Louis, Tucson, Kansas City, Indianapolis, Detroit, OKC, DFW, Tucson, Phoenix, Denver, El Paso/Las Cruces. It's the same everywhere. Just a scattering of signals on the bands, but EVERY PAIR spoken for.

The NFCC needs to quit being the lapdog of the repeater owners, and do some spectrum management housecleaning.

Before Bill Cross does.

Amateur Radio Newsline" Report 1608 - June 6, 2008

Amateur Radio Newsline report number 1608 with a release date of Friday, June 6th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC seems to challenge coordinators over paper repeaters. Amateur radio is honored for it support of the National Hurricane Center. Portugal gives its hams the 70 MHz band. The Shelby Hamfest commits to 5 years at its new home and Riley Hollingsworth tells hams that the world is listening. Find out the details on Amateur Radio Newsline" report number 1608 coming your way right now.

(Billboard Cart Here)

**

FM AND REPEATERS: TIME TO DO AWAY WITH PAPER REPEATERS

Is the FCC telling the coordination community that its time for them to act against paper repeaters? We are talking about repeaters that have been coordinated to a channel pair but have never come on the air. Or repeaters that were once operational but have been silent for a long time. Speaking at the recent Dayton Hamvention, it appears as if the FCC's Bill Cross, W3TN, has challenged the nations coordination community to make the paper repeaters go away:

--

Cross: Coordinators also need to be sure that the systems that they have coordinated are still using the channels before they tell you that your system cannot be coordinated. From what I have heard, in some areas of the country there are an awful lot of paper repeaters and an awful lot of out of date coordination's.

--

One of the reasons that paper repeaters exist at all has been the fear on the part of coordinators of being sued by the person holding the channel allocation whether a repeater exists or not. This, if they pull a coordination and give the channel pair to the next group waiting in line.

For those unaware, those hams providing repeater coordination services are volunteers. Up until now they have not been willing to risk their homes and life savings just to make the point before a judge and jury that they have the power to tell the owner of a non existent repeater to go away. Now however, Bill Cross words might be the impetus to start changing this. (ARNewsline")

**

FM AND REPEATERS: COORDINATORS BE CREATIVE

Doing away with paper repeaters will help open up channel pairs in some geographic regions, but there are others where all the channels in all of the repeater subbands are truly in use. What do you do in those cases? The FCC's Bill Cross says to use a bit of good old ham radio ingenuity:

--

Cross: "Coordinators can create more channels by, for example, requiring as a condition of coordination that the repeater that a narrower than 25 kHz bandwidth (on UHF) be used, that narrower guard bands be used or that a repeater not be installed on a mountaintop where it ties up a channel pair for half the area of a state,"

--

Cross also said that there are some instances where coordination is not necessary.

--

Cross: "Coordination only becomes relevant if there is interference. If you can find a channel that is unused, the rules permit you to put a repeater on it. If the repeater is coordinated to a closed repeater and you can use it without causing interference (to that closed repeater), you may. Coordination does not establish a squatters right to a frequency or a right to exclude others.

--

Does this mean that the FCC wants to put an end to closed and private repeaters? Well, not really. When questioned about that remark by someone in the audience, Cross went back to the FCC rules and found:

--

Cross: "Its 97.205(e). Limiting the use of a repeater to only certain user stations is permissible. Now you will not find the term closed repeater anywhere in Part 97. Thats a term that you have developed. This rule was adopted at the request of the amateur community so that a repeater owner, operator or control operator would be able to tell a particular licensee to stay off the repeater.

"Usually, our experience has been that comes as a last resort with someone whose just misbehaving and carrying on baiting people. Making unidentified transmissions and other thing that are in the category of totally obnoxious. And as a group or club, they don't want that person on the repeater. So, in the rule making proceeding the comments came in and said that we need to be able to have some kind of authority to tell someone to stay off the repeater. This rule gives you that authority."

--

What appears evident is that there is a very sharp difference of opinion between the way the ham community views closed and private repeaters and the legalistic approach of the FCC.

The FCC views 97.205(e) as an enforcement tool. Those who have run closed and private repeaters long before that rule came about, or those who want to establish one now, have seized on it to justify their exclusivity of a chosen user base. And it is quite likely that trying to prove that this rule does not codify closed and private repeaters would lead to a very costly federal court fight between opposing repeater owner operators. A legal battle that would make a few lawyers rather wealthy and likely bankrupt everyone else involved.

Also, thumbing through a recent ARRL Repeater Directory shows that with the exception of 440 MHz in Southern California, that nationally closed and private repeaters make up only about 1 or 2 percent of all the nations machines. So while the concept of closed and private repeaters is a hot button topic with many hams, the reality is that their impact on channel space availability is minimal at best. (ARNewsline")

**

RESCUE RADIO: NATIONAL HURRICANE CENTER DIRECTOR PRAISES HAMS DURING ABBUAL COMMUNICATIONS TEST

On Saturday May 31, members of the Voice Over Internet Protocol or VoIP Weather Net supported the annual WX4HNC communications test from the National Hurricane Center in Miami, Florida. The Voice Over Internet Protocol Weather net has a long history of supporting the Hurricane Center by sharing reports collected over the Echolink and Internet Radio Linking Project. And this year the centers Director, Bill Read, KB5FYA, took time out to thank the hams who devote them selves to this ongoing life saving project:

--

Read: "CQ all Amateur Radio Operators. This is Bill Read, KB5FYA, Director of the National Hurricane Center.

We all know how important it is to maintain communications during a hurricane to relay our Hurricane Warnings to those in the affected area which may have no other means to receive this vital information.

We are also very appreciative for the surface reports from those in the storm which add to our database and help our Forecasters better visualize what is actually happening at the ground level in real time. As our own Ham Radio Station, WX4NHC, celebrates it's 28th year of volunteer service at The National Hurricane Center, we extend our

thanks to all ham radio operators that continue to support our mission to help save lives.

Thank you and 73. This is KB5FYA at WX4NHC, National Hurricane Center, Miami"

--

In addition to the Voice Over Internet Protocol links, WX4HNC operational on the high frequency bands close to 3.950, 7.268, 14.325, 21.325, and 28.525 MHz. from 1 p.m. and 3 p.m. Eastern Time during the test. Stations desiring a QSL card should send their request with a self-addressed stamped envelope to Julio Ripoll, WD4R, rather than direct to the Hurricane Center. Those wanting additional information about the Voice Over Internet Protocol Weather Net should take their web browser to www.voipwx.net (KC5FM)

**

PUBLIC SERVICE: HAMS ASKED TO ASSIST CALIFORNIA ELECTION

According to the Sacramento Bee newspaper, ham radio was pressed into service to provide a communications system in sparsely populated El Dorado County during last Tuesday's state wide California election.

According to the newspaper, despite the proliferation of cellular telephones, about 40 percent of the El Dorado County's 1,790 square miles don't have cellular service. The terrain is a mix of sparsely populated open range, thickly wooded hills and hard-to-reach canyons. As such, it makes little economic sense for cellular telephone companies to provide service into the area. Unfortunately come election day some polling places in the largely rural county have had problems maintaining lines of communication, leaving poll workers isolated because there are not even wire-line telephones at these sites.

So the county elections office asked local radio amateurs to provide a communications network that would function at polling sites where the cellular telephones and other radio systems might not. At airtime the extent of the involvement in election communications network by radio amateurs is not known. The entire story is on-line at http://www.sacbee.com/101/story/976114.html (Sacramento Bee)

**

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WA3PBD repeater of the Two Rivers Amateur Radio Club serving the great state of Pennsylvania.

(5 sec pause here)

**

WORLDBEAT - PORTUGAL: HAMS GET LIMITED USE OF 70 MHZ

Portugal has granted its ham community limited access to the European 70 MHz band. The nations telecommunications regulator has announced that two sub bands from 70.167 to 70.212.5 MHz and 70.237.5 to 70.287.5 MHz are available for a limited time to the amateur community at 100 watts effective radiated power. Portuguese hams will operate 70 Mhz on a secondary, non-interference basis with other services. Also, they are not guaranteed protection against interference from other licensed stations operating on the band. The 70 MHz band is an ITU Region One only allocation. (Southgate)

**

RESCUE RADIO: AMATEURS ASSIST WITH FLORIDA FIRES

The ARRL reports that hams have been busy in recent weeks as tornadoes blew across Colorado and wildfires devastated parts of Florida. First to the South-East where amateur radio operators in Brevard County, Florida responded in a support role. This, during a recent series of wildfires that ravaged the towns of Palm Bay and Malabar. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

The fires, all of which were deemed suspicious began on Sunday, May 11th. Dubbed the "Mother's Day Fires," they burned close to 13,000 acres in southern Brevard County in an area about 25 miles east of Orlando.

According to the ARRL Letter, John Weatherly, AB4ET, and Clayton Bennett, KA4NHW, manned a 2 meter station in a shelter set up by the American Red Cross. Additionally, the Brevard Emergency Amateur Radio Services group donated the use of their mobile unit to public safety agencies. It was pressed into service as a command post in the weeklong operation.

The Palm Bay Fire Department, the Palm Bay Police Department, ARES and Florida Power and Light manned the units four operating positions which was initially dispatched to a local high school. It was later relocated to the nearby US Air Force tracking station that became the new command center, as well as the staging area for trucks and teams from other counties. Hams remained on alert until the fires were contained.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

According to official sources, the Mother's Day fires destroyed more than 30 homes and damaged almost 250 others with an estimated value of $5.6 million. A man is in custody on three counts of intentional burning of lands after witnesses reported seeing him light several small fires that were quickly extinguished. (ARRL, published news reports)

**

RESCUE RADIO: HAMS ASSIST AS TORNADOES SWEEP THROUGH COLORADO

Then on Thursday, May 22nd the ARRL reports that hams sprang to the call when a large tornado touched down in northern Colorado near the town of Windsor. Thats about 50 miles north of Denver. Amateur Radio Newsline's Don Carlson, KQ6FM is here with the details:

--

According to Colorado Section Manager Jeff Ryan, ARES District 10 was activated with Colorado Section Manager David Markham, W0CBI, monitoring the situation. A funnel cloud, accompanied by golf-ball sized hail, blackened the skies over Windsor as it knocked down power lines, shredded crops in fields outside the city and blasted whole neighborhoods. The southeast side of Windsor was the worst hit by the storm.

Colorado ARES District 10 Emergency Coordinator Randy Long, W0AVV, reported that 31 operators provided communications service to the Emergency Operations Center and Fire Department in Windsor, the Weld County Emergency Operations Center, the Larimer County Emergency Operations Center, the City of Loveland Emergency Operations Center, the Loveland Mobile Command post and two Red Cross shelters.

Friday, May 23rd Markham placed an additional 15 Amateur Radio operators in Larimer and Weld County on standby in anticipation of an overnight shift. He also requested adjacent districts to prepare in support of the ongoing operations if necessary. We will have more on this story in a future Amateur Radio Newsline report.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

News reports say that the storm resulted in one fatality, with over a hundred others injured and treated on the scene. Another 18 were temporarily hospitalized. (ARRL, published news reports)

**

ENFORCEMENT: $17,000 FINE AFFIRMED TO UNLICENSED BOSTON BROADCASTER

Turning to enforcement news. the FCC has issued a monetary forfeiture in the amount of $17,000 to Charles Clemons. This, for operating an unlicensed radio transmitter on the frequency 106.1 MHz in Boston, Massachusetts and for failing to permit a station inspection.

This past February 29th the Commissions Boston Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $17,000 to Clemons after tracing the unlicensed operation to him. To date, Clemons has not filed a response to the N-A-L or paid the proposed forfeiture. Based on the information before it the FCC has now affirmed the $17,000 fine and ordered that Clemons pay the amount within the time frame specified by law. (FCC)

**

ENFORCEMENT: FLORIDA CB'ER FINED FOR OVER POWER OPERATION

A Florida C-B operator has been fined $10,000 but will only have to pay $350. Amateur Radio Newsline's Jim Meachen, ZL2BHF, has the details:

--

The FCC has issued a monetary forfeiture in the amount of three hundred fifty dollars to Florida C-B operator Richard Ross. This, for willful and repeated violation of section 301 of the Communications involving the operation of an unauthorized C-Bradio transmitter.

According to a Commission news release, On August 16, 2007, agents from the Tampa Office inspected RossCB station to confirm that it was in compliance with the rules. They found that RossCB radio station included a CB transmitter and two linear amplifiers. The agents measured the power of the amplifiers combined power output and found the devices had the capability to boost the power of the station to several hundred times the authorized power level.

On March 31, 2008, the Tampa Office issued a Notice of Apparent Liability for Forfeiture to Mr. Ross in the amount of ten thousand dollars. Ross submitted a response to the NAL requesting cancellation of the proposed forfeiture. He asserted financial hardship and supplied the FCC with documentation to back up his claim. After examining the financial documentation submitted by Ross, it decided to reduce the forfeiture to $350.

--

Ross was given the usual 30 days to pay or to file a further appeal. (FCC)

**

RADIO LAW: CHP POSITION ON THE "HANDS-FREE" WIRELESS TELEPHONE LAWS

Some good news from the California Highway Patrol. This, for hams worried about being stopped for using their push-t-talk radio gear without hands free devices once the states new cellular telephone law takes effect on July 1st.

In a letter to several hams and authenticated by the C-G-C Communicator newsletter, Commander Fran Clader of the patrols Office of Media Relations writes -- and we quote:

"The new cell phone laws involve only wireless telephones. They do not concern radios such as your Amateur Radios, unless they are also wireless telephones.

"Again, the law only applies to wireless telephones.

"Thanks for your inquiry. If you have any further questions, please give us a call."

That said, Commander Clader does have some sound advice for anyone driving a car and operating any sort of accessory. She says -- and again we quote:

" All motorists are strongly encouraged to operate a motor vehicle safely, paying attention to their safe operation of the vehicle, the changing road and weather conditions and the actions or anticipated actions of other drivers."

Words to live by that can keep you alive, no matter where you live. (CGC, ARNewsline)

**

RADIO BUSINESS: A VX-8R UPDATE

And speaking about hands free, thats something we missed in last weeks mention of the new Yaesu VX-8R handheld. It seems as if the VX-8R is the first-ever Blue Tooth capable H-T for the amateur radio market. What this means is that with the optional BU-1 and BH-1 or BH-2 add-ons, you can operate the VX-8R hands free. This is especially handy when operating mobile as more and more states pass hands-free cellphone laws. Vertex Standard says that it hopes to have the Yaesu VX-8R available by July. (Yaesu)

**

THE SOCIAL SCENE: SHELBY COMITS TO FIVE YEARS AWAY FROM SHELBY

The Shelby Hamfest is holding onto its name, but for at least five years the amateur radio event will have a new home at Biggerstaff Park in Gaston County, North Carolina.

The Shelby Amateur Radio Club had already booked Biggerstaff Park, off U.S. 321 for the event this August. This, after failing to reach an agreement with those who run its longtime home Cleveland County Fairgrounds in Shelby.

Now, the club approved a commitment with Gaston County to hold Hamfest there for five years. Not only that, but Hamfest organizer Robbie Hamrick said Gaston County could become a permanent home for the event.

In a statement, Hamrich said that the hamfest will be there at least five years and probably longer. He says that Biggerstaff Park is a beautiful place that has room for the hamfest to grow.

The Shelby Hamfest has been a Cleveland County tradition for the past 50 years, but an un-reconcilable dispute between the local fairgrounds commission and the Shelby club lead to what will likely be a permanent move several miles to a new location in a different county. (Cleveland County Star)

**

BREAK 2

This is ham radio news for todays radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM HAPPENINGS: INTERNATIONAL LIGHTHOUSE WEEKEND

Registrations for the International Lighthouse and Lightship Weekend are now being made at http://illw.net. The event is always held on the 3rd full weekend in August starting at 00:01 UTC on Saturday running through 23:59 UTC on Sunday.

There are some interesting video clips on YouTube that give an idea of the history of the event and what it's like to operate from a lighthouse. Use the YouTube on-site search engine and the search argument International Lighthouse and Lightship Weekend to find them. (Southgate)

**

NAMES IN THE NEWS: VE7DXG TO HEAD RAC VHF/UHF PLANNING COMMITTEE

Some names in the news. First to the North where Radio Amateurs of Canada has named Gabor Horvath VE7DXG of Duncan, British Columbia, as Chair of the organizations VHF/UHF Bandplanning Committee. The Committee's role is to make recommendations to the Board of Directors on how amateur radio spectrum between 30MHz and 2GHz is divided among the various modes and techniques employed by Canadian radio amateurs. Horvath succeeds Graham Ide, VE3BYT, of Ottawa, Ontario, in this position. Ide had resigned as Chair of the committee back in 2007. (RAC)

**

NAMES IN THE NEWS: NEWSLINE'S EVI SIMONS - ENGAGED

And some wonderful news to report about one of the members on the Newsline Family. Reporter Evi Simons has announced her engagement to Michael Dworkis. The two plan to wed on Sunday, July 6th in Woodbury, New York. In Addition to her work on Amateur Radio Newsline, Evi is an accomplished voice actor and announcer. She is also a trained non-linear video editor with credits that include Makor League Baseball on-line. Anyone wishing to send congratulatory messages to Evi and Michael can do so using our regular newsline e-mail address and we will forward them on to the young couple. (ARNewsline")

**

RADIO WAVES: SOLAR CYCLE DELAYED A YEAR

The next 11-year cycle of solar storms will most likely start next March and peak in late 2011 or mid-2012. Thats up to a year later than expected according to a forecast issued by NOAAs Space Environment Center in coordination with an international panel of solar experts. The complete story is at www.swpc.noaa.gov/SolarCycle/...ssRelease.html (NOAA, QRZ.COM))

**

RADIO IN SPACE: MARS LANDER WEBSITE HACKED

The website for the new Phoenix Mars Lander has been hacked. A spokesperson for the Phoenix Mars Lander mission says a hacker took over the mission's public Web site during the wee hours of May 31st and changed its lead news story. Sara Hammond says a mission update posted Friday May 30th was replaced with a hacker's signature and a link redirecting visitors to an overseas Web site. The Mars Lander vehicle touched down on the Red Planet on Sunday, May 25th to search for traces of organic compounds that are the basic building blocks of life. The site is on-line at http://phoenix.lpl.arizona.edu/ (Published reports)

**

RADIO IN SPACE: HRISE PHOTGRAPHS MARS LANDER LANDING

A camera abroad a U-S satellite in orbit around Mars caught NASA's Phoenix Mars Lander suspended from its parachute during the lander's successful arrival at the Red Planet on Sunday, May 25th. The image radioed back to Earth from the High Resolution Imaging Science Experiment on NASA's Mars Reconnaissance Orbiter marks the first time ever one spacecraft has photographed another one in the act of landing on another planet. (Science On-Line)

**

HAM RADIO NEAR SPACE: NEW HIGH ALTITUDE HAM BALLOON RECORD SET

Cornell University high altitude balloon flight PBH-7 has broken the ARHAB altitude record with burst at 125,449 feet. This, using a 4000 gram helium filled balloon lifting KC2SMP- 2 beacon operating on 144.390 MHz. More information is on www.eyeinthesky.dyndns.org. (Press release)

**

HAM RADIO IN SPACE: SATPC32 VER 12.8 RELEASED

Erich Eichmann, DK1TB, has released SatPC32, version 12.8. This latest version of the popular satellite tracking program now contains improvements for Windows Vista compatibility, CAT control of multiple radios, and CAT control of Icom half-duplex radios.

A demo version may be downloaded from www dot dk1tb dot de slash indexeng dot htm. Eichmann donated SatPC32 to AMSAT and all proceeds of its sale support amateur satellite programs. (AMSAT)

**

WORLDBEAT - THAILAND: NSS LICENSING CLASS HELD

Andaman News NBT Radio reports on a recent huge gathering of prospective ham radio operators in Phuket, Thailand. The activity was co-hosted by the Phuket Amateur Radio Association and the Telecommunication club. It was aimed at extending basic amateur radio users to young people and other interested parties.

Students from Phuket and near by provinces attended a workshop training where they were taught a code of conduct, regulations, manners for communication as well as theory on technical aspects for communication radio. They then sat for a test for basic amateur radio in that nation.

According to the Andaman news report, in the past the amateur radio operators have played important roles in back up communications in time of disaster or when other communication systems have failed. The 2004 Tsunami incident was a good example where these radio operators stepped in and played major roles.

At present over 10,000 radio amateurs can be called out as a communication network through out Thailand. (Southgate)

**

WORLDBEAT - GERMANY: HILBERLING DONATES $14000 PT-8000 RADIO TO DARC

Germany's Hilberling Company has donated first serial numbered Hilberling PT-8000 High Frequency through VHF transceiver to that nations national ham radio society. The Deutscher Amateur Radio Club says that it will set up in the headquarters station at Baunatal. Among other things it will be used for transmitting the DL-news bulletin every Thursday night at 17:30 UTC.

The Hilberling PT-8000 is a high end DSP-transceiver that covers the high frequency bands as well as both 6 and 2 meters. In the United States these radios sell for close to $14,000 and are a direct competitor to the Icom IC-7800 and Yaesu FTDX 9000 from Vertex-Standard. But unlike the Icom and Yaesu entries, the Hilberling can be color coordinated to your station as its available in red, blue, charcoal grey.

The presentation was made on Tuesday, May 27th. Hans Hilberling, DK7LG, Klaus Lohmann, DK7XL, and Jan Hauschildt of Hilberling represented the company at the ceremony where the brand new transceiver was handed off to the Deutscher Amateur Radio Club on permanent loan. (Southgate)

**

WORLDBAT - IRELAND: TWO NEW REPEATERS IN DONEGAL

Two new repeaters are on the air from Donegal, Ireland. The 2meter repeater is EI2IPG and operates on the channel pair of 145.1125 in 145.7125 MHz with 67Hz CTCSS or 1750Hz tone for access. The 10 meter system is E-I-Zero-I-P-G on 29.580 in and 29.680 MHz out. It also requires a 67Hz CTCSS for access. Both repeaters are connected via the EchoLink system.

Steve Homer, EI2GYB, who is the Repeater Keeper says that because there have not yet been any users through the 10meter repeater that the sponsors will be giving out a certificate to the first 5 people who work through it. In Ireland and the U-K a Repeater Keeper is similar to a system trustee here in the U-S-A. More about the systems is on-line at www.echoireland.com.

Steve also tells us that Amateur Radio Newsline is played weekly on both of the new repeaters, so a big shout out to all of our new friends in the Donegal Ireland repeaters and welcome to the ever expanding world-wide Amateur Radio Newsline family. (EI2GYB)

**

DX

In D-X, word that Operators JE3NJZ and JA0KNM will be active portable JA6 from Kuro Island through thev 9th of June. Activity will be on 40 through 6 meters using C-W and SSB. QDL to their home callsigns, direct or by the bureau.

Word that 9Q1TB will be leaving the Democratic Republic of the Congro during June to start his new job in the United Arab Emirates. No word if he has been issued an A 6 call or when he will be on the air from that new location. Still remaining will be 9Q1EK, will stay in Congo for the next one or two years.

DL5ME and DG3HWO will be active as DL5ME portable OH2 from Emsalo Island, Finland, through the 8th of June. Their activity will be on the 40, 30, 20 and 17meter bands on CW and SSB. QSL via DH5MM using the QRZ.com address only.

Lastly a new 18 MHz band beacon is on the air from Sliema, Malta. It operates 24 hours a day on 18.10015 MHz USB using PSK31. Power is one half watt to a vertical antenna. QSN reports go via e-mail to stanley@9h1lo.net.

**

THAT FINEL ITEM: THE WORLD IS LISTENING

And finally this week, as he gets ready to leave his position as FCC Special Counsel for amateur radio enforcement, Riley Hollingsworth has a few words of wisdom that we all need to take to heart. They were part of his address at the recent Dayton Hamvention and they really are a must listen for every United States radio amateur:

--

Hollingsworth: "The overall compliance is outstanding in the Amateur Radio Service, but never let the Commission get by again with handing you 10 to 12 years of neglect.

"You have to stay vigilant. Even though the bands may sound better you have to stay vigilant to protect your service and to be part of the solution, not the problem.

"And operate as if the whole world was listening, because generally it is."

--

Hollingsworth adds that the last thing that ham radio needs is any sort of in-fighting. He indicates its very important that all of us stick together and work out our differences as mature individuals for the betterment of all licensees. We at Amateur Radio Newsline, totally agree. (ARNewsline")

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline". Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's" only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline", P.O. Box 660937, Arcadia, California 91066.

For now, with Bill Pasternak, WA6ITF, at the editors desk, Im Jeff Clark, K8JAC, saying 73 and we thank you for listening.

Well, "listening" generally is taken by an increasing number of folks as meaning you are listening, not that you are soliciting a call. If I hear it, and I also have some reason to talk to you, I may call. Of course, if I had something to call you about, the cellphone in my pocket probably already took care of that.

If you want to talk to someone, call them, or call cq.

>I travel a lot, to large cities like Chicago, Milwaukee, St. Louis, Tucson,

True. 10 - 15 years ago, they were busy. Now --- silent. It seems that way everywhere.

I know that for me, I now have a small car with no good place for a rig, and park in places where one might not want to leave one in the car. At home, being married sort of cuts in to sitting in front of the radio all evening.

I don't know what took the interest away for everyone else. However, with nobody on to talk to, I am less interested in solving the problems in the car to get on, so if others are in the same boat, we all contribute to the silence.

It is possible that I live in an anomalous area, but in Central PA, the repeaters are pretty busy. And State College is the smallest metropolitan area in the country. We have 5 repeaters, although one is down for maintenance right now. Altoona to the southwest has a number of repeaters that have traffic on them also.

naive mode on:

One of the most interesting aspects of Amateur radio is that we kind of expect someone to be waiting there to talk to us. While we can't control what happens in other areas, we can control our own.

If we want to generate traffic on the repeaters, the simplest way is to generate some traffic on them. Get a friend and talk on the thing. Next thing you know, others will join you. If enough places do that, there will be plenty of traffic.

naive mode off:

That is what we did in our area. Traffic was down, and the obligatory bemoaning of the problem was up.

We just had people get on the air and yak it up. Could be coincidence, but more and more people joined the party, and a few years later the repeater is in constant use.

This is one that Hams themselves have to bootstrap.

> The NFCC needs to quit being the lapdog of the repeater owners, and do some
> spectrum management housecleaning.

Interesting concept, but how to determine use or lack of use? (sounds easy, but in practice it isn't.

It's certainly that way in rural Minnesota. There are repeaters in many of the small towns, and they're alive in the sense of being technically there, but they're dead in the sense of anyone using them on a regular basis. Sometimes there's a regular group who gets together in the morning, but for our local repeater even that custom has faded away.

We lost our UHF repeater almost a year ago when the elevator it was on was destroyed by lightning. [For you city slickers, the word "elevator" out here in the sticks is used to describe a large structure in which grain is stored.] That repeater is still silent. A new location was secured, and funding for it was provided by the local emergency management agency, but the antenna still hasn't been erected.

So I have to wonder, in metro areas where all the slots are "full", how many of those repeaters actually exist and would respond if presented with a correctly-toned signal on their published input frequency. Perhaps more important, how many of them are used regularly? It might actually make more sense to shut down several repeaters that don't have a critical mass of users and move those small groups to the remaining repeaters so that there was actually someone there to talk to. Better to have two or three active repeaters in a metro area than a dozen dead ones.

>   I don't know what took the interest away for everyone else. However, with

It's a chicken and egg problem. I know that I'm contributing to the problem; my 2-meter equipment consists of an HT, and I've considered that I need to buy a "real" 2-meter rig and put up an antenna . . . but it's difficult for me to justify the time and expense to do so when there's no activity.

==> NATIONAL HURRICANE CENTER DIRECTOR JOINS WX4NHC ANNUAL TEST

On Saturday, May 31, WX4NHC <http://www.wx4nhc.org/>, the Amateur Radio station at the National Hurricane Center (NHC), held their annual Communications Test from 1300-2100 UTC. According to WX4NHC Assistant Coordinator Julio Ripoll, WD4R, this annual test has two purposes: To verify that ham radio equipment will not interfere with any equipment at the NHC, and to ensure proper performance of Amateur Radio equipment at the NHC.

During the test, NHC Director Bill Read, KB5FYA, addressed the Amateur Radio community on the VoIP Hurricane Net and on the Hurricane Watch Net <http://www.wx4nhc.org/Bill-Read-QST.mp3>. Read spoke about the importance of Amateur Radio in hurricane-related disasters and thanked Amateur Radio operators for their support in past hurricanes. He encouraged hams to continue to provide that strong support as WX4NHC enters its 28th year of service and the 2008 Atlantic hurricane season begins. Read made several contacts with Amateur Radio operators during the test.

"We all know how important it is to maintain communications during a hurricane to relay our hurricane warnings to those in the affected area which may have no other means to receive this vital information," Read said. "We are also very appreciative for the surface reports from those in the storm which add to our database and help our forecasters better visualize what is actually happening at the ground level in real time. As our own ham radio station, WX4NHC, celebrates its 28th year of volunteer service at the National Hurricane Center, we extend our thanks to all ham radio operators that continue to support our mission to help save lives."

Ripoll, calling the annual test "very successful," thanked all the amateurs involved and called on them for their support as the hurricane season starts up. During the test Ripoll and his crew also completed antenna work in preparation for the season.

Ripoll said that the WX4NHC Annual Station Test started very early on Saturday with three of the operators replacing the main HF dipole. "The dipole runs from the 100 foot tower to the top of the Hurricane Center Building and was reinstalled with a better orientation so that the main effective lobes run SE and NW," he said. "This will improve reception to the Caribbean, as well as the US Gulf area. It took three hours of bringing the dipole up and down to fine tune the SWR down to 1:1.2, but it was worth the effort. Stations monitoring our antenna tests reported improvements of 3 to 6 dB at their locations. We are very happy with the results of this new antenna installation."

It was good timing for the test as the 2008 Atlantic hurricane season started on the same day, albeit one day earlier than it was scheduled: Tropical Storm Arthur formed from the remnants of Pacific Tropical Storm Alma over Central America. Arthur did weaken, but was responsible for very heavy rains and flooding over portions Guatemala, Honduras, Belize and Mexico. This is the second straight year in which a tropical system formed prior to the start of the Atlantic hurricane season.

WX4NHC made 346 contacts during this event: 291 on HF and 55 on EchoLink/IRLP. They heard from 23 states and US territories, as well as such foreign locales as Bermuda, Curacao, Jamaica, Cuba, Honduras, Estonia and Canada.

"The WX4NHC Coordinators and Operators extend their thanks to all ham radio operators that participated in our Annual Station Test," Ripoll said, "and look forward to your continued support during the hurricane season."

==> ARRL FOUNDATION ANNOUNCES 2008 SCHOLARSHIP RECIPIENTS

In May 2008, the ARRL Foundation Board of Directors voted unanimously to award the prestigious William R. Goldfarb Memorial Scholarship <http://www.arrlf.org/programs/scholarships> to Austin Evans Wilmot, KD5QKS, of Dallas, Texas. Wilmot will graduate from Richardson High School this year with a cumulative GPA of 97.64, placing him 19th in a class of 431.

First licensed in 2001, Wilmot holds a Technician class license and was active in his elementary school's Amateur Radio club (W5SPS); he is currently active in the Richardson Wireless Klub, K5RWK. His commitment to volunteer service in his community included support for the Lone Star MS150 Bike tour and the City of Richardson's annual Christmas parade. He can be found on local repeaters and is currently studying for his General class license.

Wilmot credits Amateur Radio with helping to develop leadership, organization and communication skills. Wilmot's studies at Washington University in St Louis will concentrate on medicine and will include his interest in mathematics and finance. "I envision a future as a scientist and economist where I can apply my analytic skills with compassion and curiosity," Wilmot said.

The Goldfarb Scholarship is the result of a generous endowment from the late William Goldfarb, N2ITP. Before his death in 1997, Goldfarb set up a scholarship endowment of close to $1 million in memory of his parents, Albert and Dorothy Goldfarb. Awarded to one high school senior each year, the Goldfarb Scholarship assists the recipient to receive a four-year undergraduate degree in engineering or science or in the medical or business-related fields. The terms of reference of the generous Goldfarb scholarship award require that recipients demonstrate financial need and significant involvement with Amateur Radio, in addition to high academic performance. The sixth Goldfarb Scholarship winner, Wilmot continues the tradition of prior recipients, demonstrating superior academic performance, outstanding leadership and extraordinary Amateur Radio and community service.

More information on the Goldfarb Scholarship is available on the ARRL Web site. Applications for the Goldfarb Scholarship and other ARRL Foundation Scholarships are accepted each year beginning October 1 and ending February 1 for the academic year that starts the following August/September.

The ARRL Foundation awarded more than 50 scholarships -- ranging from $500 to $2500 -- for the 2008-2009 academic year. For a complete list of recipients, please see the ARRL Web site <http://www.arrl.org/news/stories/2008/05/31/10131/?nc=1> or the July issue of QST.

==> HAMS HEAD INTO SPACE

On Saturday, May 31, the space shuttle Discovery launched into the heavens carrying a crew of one Japanese and six American astronauts to the International Space Station (ISS); of the seven crew members, two are Amateur Radio operators. NASA's Greg Chamitoff, KD5PKZ, is the ISS Flight Engineer and Science Officer on Expedition 17 and will spend six months living and working onboard the ISS, returning home on Endeavour (STS-126), currently targeted for November 10. Japan Aerospace Exploration Agency's (JAXA) Akihiko Hoshide, KE5DNI, is a mission specialist.

Chamitoff will replace Garrett Reisman, KE5HAE, who arrived on the ISS in March; Reisman will return to Earth when Discovery leaves the ISS. It is expected that the ISS Crew -- Commander Sergei Volkov, RU3DIS; Flight Engineer Oleg Kononenko, RN3DX, and Chamitoff -- will conduct Amateur Radio on the International Space Station (ARISS) contacts while on the ISS.

This mission, STS-124 -- the 123rd space shuttle flight and 26th shuttle flight to the ISS -- docked with the ISS at 2:03 PM (EDT) on Monday, June 2. Discovery carries with it the second component of JAXA's Kibo laboratory, the Japanese Pressurized Module (JPM). The 37 foot, 32,000 pound JPM will be attached to the left side of the Harmony connecting node by shuttle and station crew members during a series of three spacewalks. The JPM will join the first component of Kibo, the Japanese Logistics Module, which was launched on the last shuttle flight, STS-123 on Endeavour, in March.

Kibo (which means hope in Japanese) is so heavy that only its primary set of avionics systems can be launched inside it. The second set was launched in the logistics module delivered on STS-123 so that it will be available, if needed, when Kibo is activated. "Kibo is just a beautiful piece of work," said lead shuttle flight director Matt Abbott. "I know the Japanese space agency had an element installed on STS-123, but this is really their pride and joy. This module is amazing."

"It's going to be a world-class laboratory," said astronaut Mark Kelly, Discovery's commander. "It's its own little spacecraft, in the sense that it has an environmental system, electrical system, its own computer system, its own robotic arm. It's got a lot of capability, and I'm hopeful that over the years that the laboratory produces significant discoveries in the fields of chemistry, physics, material science and life sciences. It certainly has that potential." The Kibo laboratory complex includes two robotic arms that also will be delivered on Discovery. A third and final shuttle mission to complete the complex will launch an exterior platform for the Kibo laboratory complex that will allow experiments to be exposed to space.

On Earth, STS-124 will mark the first time the JAXA flight control team will activate and control a module from Kibo Mission Control in Tsukuba, Japan. JAXA is scheduled to take over final activation of Kibo on the fifth day of STS-124, the day after the module is installed. "That's a big day for Japan," Hoshide said. "We'll be doing vestibule outfitting, which is basically hooking up all the jumper connections between Node 2 and the pressurized module for power signals, data cables, fluid lines, all that stuff. Once that's done we will be activating the main computer in the pressurized module from our laptop computer inside the station - we call that the initial activation. "Then, once the computer's activated, the Mission Control Center in Tsukuba Space Center can start commanding, so we'll hand it over to them. They will start doing the final activation of the module."

In addition to Kelly, Hoshide and Chamitoff, the STS-124 crew consists of Pilot Ken Ham and Mission Specialists Karen Nyberg, Ron Garan and Mike Fossum. Discovery is due back to Earth on Saturday, June 14 at 10:45 AM (EDT) at Kennedy Space Center's Shuttle Landing Facility. -- Information provided by NASA

==> FIELD DAY LOCATOR SERVICE UP AND RUNNING

This year, for the first time, the ARRL has put together a Station Locator to help amateurs or those interested in Amateur Radio find a Field Day site near them. According to ARRL Field Day Manager Dan

Henderson, N1ND, many amateurs have been asking for something like this for many years.

If your group would like to be a part of the Station Locator Service, it's easy to get started. Just go to the Field Day Station Locator Web site <http://www.arrl.org/contests/announcements/fd/locator.php> and follow the instructions.

To help you out, Henderson has prepared a FAQ for the Field Day Station Locator.

Q) How does our Field Day site get listed on the map?
A) A club official or Field Day Chairman needs to go to the Web site. Once there, click on the link for "Add a Station" and follow the instructions.

Q) I put in the name of the park where we will be holding Field Day but got the message that the program can't find it. What do I do?
A) You should use a street address for the location. Unfortunately, the mapping program doesn't have a 100 percent complete database of park names and public site names. You may also use a latitude/longitude - enter the values separated by a comma (e.g. 42.345N, 85.445W) and set the city to NONE).

Q) I put in a street address but the map locator put me it in a wrong location on the street. What do I do?
A) While in the data input or edit screen, use your cursor to move the red "pin" to the correct location on the map.

Q) What if I put in the wrong information or something about our Field Day operation changes?
A) The person who input the data will be able to edit the entry. Simply follow the "Add a Station" link and then select "Edit this entry" next to the one to correct.

Q). I tried to enter my club's information, but I was denied access. What do I do?
A) To help ensure that only one person is managing a club's entry, you must be logged onto the site with your ARRL member ID and password. If you are not an ARRL member, ask a member of the club who is to be responsible for adding the club's information to the site.

Q) I am looking for a Field Day operation to attend. How do I use the site?
A) Begin by typing in the city and state where you would like to search, something like "Brooklyn, New York" or "Anaheim, California." Depending on the geographic location, the map will take you to the area you list. If a Field Day operation has been registered for that general area, a red "pin" will show on the map. If you click on the red pin, the details for that site will appear in the box on the right hand side of the screen. If you don't see a red pin, scroll out a level to find one near the location you listed. It is also possible to drag the map to other areas by holding down the left button on your mouse and then moving the

map around. You can also scroll in and out using the +/- buttons on the left side of the map. You may also zoom in and center by double-clicking with the mouse near the red pin.

Q) I found a red pin near where I will be. Where do I find the information on that site?
A) Each entry has a contact person with either an e-mail address or phone number who should be able to help you. It will appear on the right side of the box when you click on the red pin for an entry.

Q) I found an entry with wrong information. What should I do?
A) Please contact the person whose name appears as the contact person for that site. ARRL HQ does not have detailed information on the site.

Q) I want to check on our club's information. What should I do?
A) Type in the call sign that will be used and you will be taken to the location and club information.

ARRL Field Day will be held June 28-29. For more information, please visit the Field Day Web page <http://www.arrl.org/fieldday>.

==> ARMY MARS OFFERS FREE FATHER'S DAY MESSAGES FOR SOLDIERS OVERSEAS

If Jeff Hammer, N9NIC, gets his way, he'll be an awfully busy soldier in the run-up to Father's Day on June 15. Captain Hammer, who represents the Army Military Affiliate Radio System (Army MARS) in Iraq, has appealed to the families of troops deployed overseas to "shower down with Father's Day messages" for their loved ones.

According to Army MARS Public Affairs Director Bill Sexton, AAA9PC/AAR1FP/N1IN, these free messages -- called MARSgrams -- date back to the Korean War when many thousands were delivered. The service continued during the Vietnam conflict and the first Gulf War, but had fallen off with the advent of e-mail and cell phones.

As the military's Middle East operations continue, Sexton said that the responses from that area indicate that the soldiers treasure the printed MARSgrams as mementos of their deployment: "It's not just a greeting. E-mail just isn't the same." MARSgram traffic spurted last Thanksgiving and Christmas, and Captain Hammer reports that he is "100 percent set up" to handle MARSgrams for Father's Day.

A National Guardsman from Indiana, Hammer arrived in Baghdad just this spring after previously serving in Afghanistan. In addition to volunteering for the MARS assignment, he is acting as station custodian for the Baghdad Amateur Radio Society. Hammer shipped in his own low-power ham station and began direct receipt of messages May 25; he has to shoehorn his volunteer Amateur Radio activity into his off-duty hours.

On Sunday, June 1, five soldiers including Hammer gathered for a meeting of the Baghdad ARS. Besides Hammer, three Amateur Radio operators are part of the group: Warrant Officer 2 Edward Mendez, N3BZA, who also operated the military MARS station ABM4USS in Korea for an Aviation Maintenance Company; Barry Coronado, KC8RTK, a Department of Defense employee, and Wayne Gale, W0GTO, a contractor.

The subject of Sunday's meeting was preparing for the hoped-for Father's Day surge. After a period of instruction on MARS procedure during which the participants wrote their own MARSgrams, Hammer took the members to his personal MARS station to attempt transmission despite difficult propagation conditions.

"We are only running 5 W on a Yaesu 817, but we wanted to give it a try if for no other reason than to see the equipment and demonstrate the procedure," Hammer messaged afterward. "God must have been smiling down on us because after only a few attempts we connected to AEN3QT in Qatar on 40 meters and got all the messages through without any problems."

Family members can easily send free MARSgrams overseas by entering their message on the MARSgram Web site <http://www.mymars.org/>. The Army MARS WinLink system will automatically relay the Iraq-bound messages to Hammer and his helpers; they will produce printouts and envelopes and hand them off to the Military Postal Service for final delivery. A MARSgram travels much faster than ordinary mail and can be delivered wherever American troops serve.

Army MARS is a Department of Defense-sponsored organization of more than 2700 Amateur Radio operators who provide emergency communications backup for government agencies in times of civil calamity; active-duty service personnel are welcome to join. Parallel MARS units serve the Air Force and Navy-Marine Corps, making the three-prong program more than 5000 members strong.

==> ARRL WELCOMES YAESU AS PRINCIPAL SPONSOR OF LOGBOOK OF THE WORLD WEB SITE

The ARRL welcomes Yaesu as the principal sponsor of the Logbook of The World (LoTW) <http://www.arrl.org/lotw/> Web site. LoTW is a repository of log records submitted by users from around the world; when both participants in a QSO submit matching QSO records to LoTW, the result is a QSL that can be used for ARRL award credit. With almost 21,000 amateurs registered on LoTW, more than 170 million QSO records have been entered into the five year old system, resulting in more than 13.4 million QSL records.

"Yaesu is absolutely delighted to be the Principal Sponsor supporting the extremely popular ARRL Logbook of The World Web site," said Yaesu's Executive Vice President for Amateur Radio Sales and Marketing Dennis Motschenbacher, K7BV. "It provides Yaesu with an opportunity to serve the Amateur Radio community. We hope LoTW users will note our support and judge this action for what it is intended to be -- a 'Thank You' to the thousands of avid DXers and other active operators worldwide." In return for its sponsorship of the LoTW Web site, Yaesu will receive promotional consideration in QST and on the LoTW Web site.

Motschenbacher said he understands that hams have felt the "pain" of postal price increases around the world: "I am certain that a huge number of hams have had to give up their dream of having prestigious ARRL certificates and plaques on their wall simply because they could no longer afford the postage costs associated with exchanging QSL cards to verify contacts. Those QSO verifications are, however, absolutely essential for maintaining the integrity of ARRL's DXCC and other awards. LoTW, with its global acceptance, now allows nearly everyone interested in the excitement that goes along with chasing DX and awards to provide most if not all of the required all-important QSO verifications without burdensome postage expenses. LoTW provides a very valuable service for both the individual users and ARRL."

ARRL Chief Operating Officer Harold Kramer, WJ1B, thanked Yaesu for their ongoing support of the ARRL. "We look forward to working with them on the Logbook of The World Web site."

==>SOLAR UPDATE

Tad "A sunny pleasure-dome with caves of ice" Cook, K7RA, this week reports: We had seven days of no sunspots this week, but a sunspot was emerging on Thursday, June 5. Helioseismic holography revealed a high latitude sunspot on the opposite side of the Sun. Until recently, we had no idea what was happening on the far side of the Sun, the side directed away from Earth. The NOAA Space Weather Prediction Center sees a constant and quiet geomagnetic planetary A index of 5 through June 14. Geophysical Institute Prague predicts quiet conditions for June 6, quiet to unsettled June 7-8 and quiet again June 9-12. Sunspot numbers for May 29-June 4 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 68.1, 67.1, 66.9, 66.6, 67.1, 66.3 and 65.2 with a mean of 66.8. Estimated planetary A indices were 9, 11, 8, 8, 5, 4 and 4 with a mean of 7. Estimated mid-latitude A indices were 7, 7, 8, 6, 4, 3 and 2, with a mean of 5.3. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint Ladder and the Digital Pentathlon are both June 6, and the Wake-Up! QRP Sprint is on June 7. On June 7-8, look for the DigiFest, the SEANET Contest, the UKSMG Summer Contest, RSGB National Field Day - IARU Region 1 Field Day (CW) and the Alabama QSO Party. The SKCC Weekend Sprintathon is June 8. The NAQCC Straight Key/Bug Sprint and the RSGB 80 Meters Club Championship (CW) are both June 11. Next weekend is the ARRL June VHF QSO Party on June 14-16. Look for the NCCC Sprint Ladder and the Digital Pentathlon on June 13. The Portugal Day Contest and Asia-Pacific Sprint (SSB) are June 14. Look for the ANARTS WW RTTY Contest, the GACW WWSA CW DX Contest, the REF DDFM 6 Meter Contest and the West Virginia QSO Party

on June 14-15. The Run for the Bacon QRP Contest and the SARL Youth for Amateur Radio Event are June 16. The RSGB 80 Meter Club Championship (SSB) is June 19. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 22, 2008 for these online course sessions beginning on Friday, July 4, 2008: Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* More Field Day T Shirts On the Way! During the last couple of weeks, a surge of demand for 2008 ARRL Field Day T shirts had exhausted the supply much earlier than previous years. "It's clear that this year's Field Day logo and slogan -- Ride the Waves -- is a big hit!" said ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R. "We want to assure our valued members and clubs that more shirts are on the way. Until today, we weren't certain we could restock the shirts in time for delivery before Field Day. But our manufacturer has promised to re-supply the shirts as early as next week." ARRL Field Day is June 28-29. To order Field Day T shirts, participation pins and other items, as well as information on this year's Field Day, including the Field Day Locator Service, please go to the ARRL Field Day Web page <http://www.arrl.org/contests/announcements/fd/>. The ARRL regrets any inconvenience with order delays. Inderbitzen added, "Since February, we've encouraged clubs to place their orders early. But this good news means there's still time to Ride the Waves!"

* Morse Code Returning to MARS Toolbox: After more than a dozen years, Morse code will soon be returning to Military Affiliate Radio System (MARS) nets. In the mid-1990s, the Department of Defense (DoD) did away with CW operation across the board -- including MARS nets -- as automatic systems such as the Internet, SATCOM, cell phones and e-mail became available and the payroll cost of manual operators escalated. Army MARS launched a limited test of CW nets in four Midwestern states

in late 2007. During a DoD interoperability test this past March, a Transportation Security Administration (TSA) station used it to communicate with Fort Huachuca. In announcing the return of CW to MARS nets, Navy-Marine Corps MARS Chief Bo Lindfors cited an emergency where CW was sorely missed: "I remember the [1998] Northeast Ice Storm shortly after I became [Navy-Marine Corps MARS] Chief and the unnecessarily lengthy effort by all of southern New England to receive one voice EEI [Essential Elements of Information Report] from a northern New England member whose antenna was covered in ice and lying on the ground. It took more than an hour when CW could have handled it in a few minutes. As more and more of our members enter MARS with no Morse code experience, I am afraid that we will soon lose that skill set if we don't do something." Army MARS Chief Carter said the imminent return of CW will not replace modes such as WinLink, Pactor 3 and MT63. "Our CW nets will focus on maintenance of skills and will necessarily be limited by the shortage of available frequencies and trained members," he said. "But if members want to add CW to their skills, the nets will be available for training."

* Hein Hvatum, N4FWA (SK): Hein Hvatum, N4FWA, who in the 1970s and '80s supervised construction of one of the world's most powerful radio observatories, died of cancer May 22 at his home in Charlottesville, Virginia. He was 85. In 1974, Hvatum assumed responsibility for construction of the National Radio Astronomy Observatory's Very Large Array (VLA), an arrangement of radio telescopes near Socorro, New Mexico. The VLA has made key observations of black holes and protoplanetary disks around young stars, discovered magnetic filaments and traced complex gas motions at the Milky Way's center, probed the Universe's cosmological parameters, and provided new knowledge about the physical mechanisms that produce radio emission. The observatory is perhaps best known to the general public for its appearance in the 1997 movie "Contact" with Jodie Foster; it has also appeared in Carl Sagan's documentary "Cosmos," in the movie "Independence Day," in a Bon Jovi music video and on the cover of a Dire Straits album. The VLA was completed in 1982. Hvatum, an ARRL member since 1981, was responsible for computing, antenna design and electronics for the $78 million project, the largest the National Science Foundation had funded at the time. Hvatum became acting director at NRAO in 1984 and project manager for the Very Long Baseline Array the next year. He retired in 1987. Hvatum, as a member of the Albemarle Amateur Radio Club, organized a number of community emergency preparedness drills. He was active with both national and international groups seeking to protect radio frequencies for radio astronomy. Calling Hvatum a "friend, mentor and Elmer," the Albemarle ARC said Hvatum will be missed "by everyone who had the pleasure of knowing him and calling him a friend." According to the Albemarle ARC Web site, a memorial service for Hvatum is planned for 2 PM on June 27 at NRAO Headquarters. The family requests that in lieu of flowers, donations be made to the Hospice of the Piedmont or to the Leukemia/Lymphoma Society.

* Be Careful on 10 Meters: With recent band openings beginning on 10 meters, ARRL has received word that a number of US amateurs have been heard using SSB below 28.300. "We urge everyone to remember that 28.000

to 28.300 MHz is reserved for RTTY and data, including CW," said ARRL Field and Regulatory Correspondent Chuck Skolaut, K0BOG. "Phone is permitted from 28.300 to 28.500 for Novice and Technician class licensees with a maximum power of 200 W. Phone and image are allowed from 28.300 up to 29.700 for General, Advanced and Extra class license holders." Skolaut, who manages the Official Observer and Intruder Watch programs, said that people have called and e-mailed ARRL HQ inquiring about hearing IDs repeated in code on various 10 meter frequencies. "What they are hearing are beacons," Skolaut said; he suggests checking out some Web sites for more information on beacons you might hear on 10 meters <http://www.dxzone.com/cgi-bin/dir/jump2.cgi?ID=1114> and other bands <http://www.ncdxf.org/beacons.html>.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all

automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

In article <Kuudnbkuasz899XVnZ2dnUVZ_rfinZ2d@earthlink.com>,
K�HB <groupk0hb@earthlink.net> wrote:
\>Then go to each QRG

Please speak english.

\>in sequence and transmit "K0HB LISTENING". Nobody home.

When I hear someone say "listening", I think, "that's nice, they're listening". I'm listening, too. If I don't know them or have some reason to talk to them, I don't call them.

\>The NFCC needs to quit being the lapdog of the repeater owners, and do some
\>spectrum management housecleaning.

So now it is also the responsibility of the repeater owner to protect his investment in equipment by seeking people to use his repeater all the time? Otherwise, it will be "housecleaned" out from under him?

Do we have enough people to use all the possible repeaters all the time? If not, then "housecleaning" to open spectrum up for other people to install repeaters will just result in more empty repeaters. If you say you just want to houseclean out all the unused repeaters and replace them with nothing, what value is the housecleaning? You'll remove valuable resources and replace them with nothing. The only "gain" (in the former case) will be that new people who want the status of owning a repeater will own repeaters that are empty. No gain at all in the latter.

I'll point out the opposite opinion: a repeater that is filled with chit-chat all the time is unlistenable. It just drones on and on and becomes background noise. Couple that with people who think they need to be cute and entertaining on the air and it's no longer just noise, it's painful. We have a "lunch bunch" on a local system every day. The net control seems to think a sing-song delivery and "creative phonetics" for everyone checking in is mandatory. I know some people like it. I find it difficult to understand what he's saying most of the time. Is he saying something important, or is he just spouting words with the right first letters for the callsign he just heard? I turn it off.

In news:g2aquh$m63$1@news.stanford.edu,
Alan <nospam@w6yx.stanford.edu> typed, for some strange, unexplained
reason:

[snip]

:   Well, "listening" generally is taken by an increasing number of
: folks as meaning you are listening, not that you are soliciting a call.
: If I hear it, and I also have some reason to talk to you, I may call.
: Of course, if I had something to call you about, the cellphone in my
: pocket probably already took care of that.
:
:   If you want to talk to someone, call them, or call cq.

Now that's an interesting thought. When I was studying for my licence back in 1982 we were told quite categorically that one didn't "call CQ" on repeaters, but that we should announce that we were "listening through" the repeater.

Even now, someone calling CQ via a repeater makes me wince ever so slightly..!

I didn't make my point very well. We don't need to "generate traffic", we simply need to clean out the dead "legacy" assignments and free up room for things like DStar and other emerging technologies.

I just had a look at our local (Minneapolis/St Paul) pair assignments. In the 2M and 75CM bands there are 108 repeater pairs assigned. You read right --- ONE HUNDRED AND EIGHT! Yet I can scan both bands for hours on end and hear nothing.

Since this thread is about the "5th Pillar" of ARRL emphasis, "technology", perhaps ARRK and NFCC could jointly sponsor a Skimmer-like technology initiative which would put up a broadband receiver on a local highrise (we're in flatland country out here) and count squelch-tails per QRG for three months. Then approach the low 10% and suggest they might reconsider their needs. Especially those clubs who sponsor multiple quiet repeaters all covering an identical footprint.

73, de Hans, K0HB

Ivor;

Amazing, that is what I was taught back in the mid 70's. Times they are
a changing....

I know that I'm contributing to the problem; my 2-meter equipment consists of an HT, and I've considered that I need to buy a "real" 2-meter rig and put up an antenna . . . but it's difficult for me to justify the time and expense to do so when there's no activity.

There used to be so much activity around here in Tucson a decade or more ago, and I was active in it, but I suppose everyone migrated to the internet... ? I thought about installing my 2m radio in my car so that I have something to occupy part of my cross-country drive next year (I hope), but maybe it's not worth it. If I knew there were folks along the way regularly monitoring .52, I'd do it. If repeaters didn't have all these different tone accesses, I'd do it. I'm not going to spend each night of the trip programming the radio to accommodate what repeaters I may encounter for any given upcoming 500 mile stretch.

Howard

If you know a "dead" frequency pair, what interference do you imagine you
will create by using it for Dstar or other emerging technology? If you
aren't creating interference for a coordinated repeater, what prevents
you from using that pair?

>which would put up a broadband receiver on a local highrise (we're in flatland
>country out here) and count squelch-tails per QRG for three months.

I'm not sure how you count "squelch tails", but that's such a simple system to game that it would mean nothing. If I wanted my pair kept "active", I'd simply make a dozen calls a day on the output frequency. (Is THAT what this QRG thing you keep talking about is? I don't speak CW on Usenet.) Heck, I'd just set up an APRS beacon on the output. They have squelch tails too.

>Then
>approach the low 10% and suggest they might reconsider their needs. Especially
>those clubs who sponsor multiple quiet repeaters all covering an identical
>footprint.

And then the stuff hits the fan and the groups that were going to support the local hospital and power company and red cross and cop shop and road department find themselves all trying to use the one or two repeaters you'd like them to be limited to, while the DStar systems sit silent because nobody could afford the radios to use them.

Oh my!

Well that may explain why my echollink setup doesn't work on my laptop at all from home but works great from other locations just fine. It's really annoying because it passes all the built in tests with flying colors but it simply won't connect even to the test node from home. I know the software works because when I am at the in-laws house it works great. For now I'm stuck having to go though a proxy node, which are few and in demand.

I've been struggling with the idea that it's my router/firewall at home. I've tried both the port forwarding and port triggering approaches without any success and I was starting to think that the router was faulty. I was going to try and set up a different router and see if the problem went away, but it really doesn't make any sense that the router would be to blame.

I suppose my ISP could be filtering stuff, but they don't admit to any filtering when asked. I am restricted from running any "servers" on my dynamic IP, but I was under the impression that they really didn't enforce any firewall rules. (Not that I've tested this idea...)

Well, my IP address isn't a private address in any of the reserved
address spaces.  I've been known to run bit-torrent downloads with no
issues with inbound connections.  Of course bit-torrent uses TCP only
and EchoLink uses UDP for the voice stream and TCP for the control
stream.  I suspect that my ISP may be blocking UDP traffic in an
effort to keep people from using VOIP phone services as they are a
phone company too.

The good news is that I have fiber optic to my house... Fiber doesn't
conduct electricity and isn't effected by RF fields so I'm afforded a
measure of lighting and RFI protection.  Even if they won't allow
EchoLink...

I guess I'll try and call their support line and see if I can talk to
somebody who will understand what I mean when I say UDP Port 5198...

The fact that you can use EchoLink through a proxy server suggests that your router/firewall is correctly configured. It's possible that you could have a very obscure misconfiguration, but I doubt it. I, too, spent hours fiddling with router and firewall configurations trying to make things work here, so I feel your pain.

In another article you mentioned using bittorrent; I don't know if it requires inbound TCP. But have you actually seen anyone establish a connection TO you? Maybe it operates like Echolink in the sense that much of the functionality works fine even if other nodes can't establish an inbound TCP connection to you.

Since this issue with inbound connections is pretty common, I'm a little surprised that the Echolink folks haven't come up with some kind of built-in test that would identify it. Have you considered putting something on your system that listens for inbound connections -- perhaps a web server -- and trying to connect to it from, say, your in-law's where Echolink is functioning? This would answer the question of whether your ISP is allowing inbound connection requests, at least on the port you use for the test.

Good luck on finding someone at your ISP who understands the term "inbound connection request." I'm thinking that if you ask using the term "filtering", they'll answer a different question than the one you really wanted to ask. I finally did find someone who understood my question and had enough technical knowledge to answer it, but it took a while.

""Strong earthquake hits China, all ham radio operators stand by

PLEASE HELP
TO SPREAD THE FOLLOWING MESSAGE

Strong earthquake hits China, all ham radio operators stand by A Magnitude 7.8 earthquake hits Sichuan, China on Monday, May 12, 2008 at 06:28:04 UTC. Casualties and loss unknown up to now. According to Chinese Radio Sports Association, 14.270Mhz, 7.050 and 7.060 Mhz are preserved for amateur radio emergency service in the rescue. Please spread this message as far as you can and keep the frequencies clean for emergency use. Thank you.

Yesterday, 05:57 PM
BG8AAS from Chengdu, Sichuan reported that local UHF repeater survived in the disaster. It keeps functioning from the 1st minute and more than 200 local radio hams are now on that repeater. A group of hams from Chengdu has headed for Wenchuan, the center of the quake, trying to setup emergency communication services there.

BA8AB, also from Chengdu, Sichuan, is active on the 40m emergency frequency. Up to now, no further information available from the center zone of the quake. There are a few radio amateurs there, but all of the communications have been cut out, including amateur radio.

Yesterday, 06:58 PM
Update

According to BG8AAS, local UHF repeater in Chengdu keeps busy running after the quake. It helps to direct social vehicles to transport the wounded from Dujiangyan, Beichuan, and other regions. Another UHF repeater also starts its working in Mianyan, supported by generators.
However, they are going to face a shortage of gas.

Damage in Chengdu remains in the lowest level, but the situation is

```
very
very bad in the counties around. A few towns are said to be destroyed
completely. More than 7000 died in the town of Beichuan. Casualties
in
several other towns are still unknown and not counted in the
published
numbers.

It is a long and sad day.
-----------------------
Today, 08:31 AM
Your attention please! 14.270Mhz is now reserved for ARES in 5.12
earth
quake in Sichuan, China. Please help to keep this frequency clear.

A group of radio amateurs is now transmitting from Wenchuan, the
center of
quake. Its signal is reported to be very weak. They tried to keep
communication with BY8AA in Chengdu, seeking for all resources
needed.
During a contact finished a few minutes ago, they were asking for
raincoats,
water, tents, and outdoor living facilities.

PLEASE HELP TO FORWARD THIS MESSAGE TO ALL RELEVANT FORUMS, MAILING
LISTS,
AND NEWS RESOURCES. MEANWHILE, KEEP THE ABOVE FREQUENCY CLEAN FOR
EMERGENCY
COMMUNICATION.

Michael Chen, BD5RV/4""

It's even more alarming that those polite folk are willing to suggest a Maunder minimum on the basis of a slow start to a cycle. They should have checked their Fun an Waganalls, or at leat Wikipedia. We'd pretty much have to miss a whole cycle to declare the possibility of entering a new minimum.

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup for amateur radio operators and other people having an interest in the Amateur Radio Service, as defined by national regulations and international treaties. Following are the posting guidelines for this newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
    2.1 Netiquette guidelines
    2.2 Posting form requirements
    2.3 Guidelines on signature (.sig) files
    2.4 Guidelines on excessive quoting
    2.5 Guidelines on pointers to outside sources
    2.6 Guidelines regarding questioning someone's suitability to hold an amateur radio license
    2.7 Guidelines regarding name-calling
    2.8 Guidelines regarding civility
    2.9 Other unacceptable topics

---

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur radio operators and other people having an interest in the Amateur Radio Service. Participants are invited to engage in open discussion of amateur radio issues and exchange information about participating in the hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions and discussions about amateur radio licensing, regulations, tips on various aspects of setting up an amateur radio station, and sharing operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade posts, posts that are off-topic to the Amateur Radio Service, posts promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
- Welcome to Usenet!
- Rules for posting to Usenet
- Hints on writing style for Usenet
- A Primer on How to Work With the Usenet Community
- Emily Postnews Answers Your Questions on Netiquette
- Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include

Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html |

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

A few years ago I thought about getting into it but was busy w/ school
work and dropped it.

The thought of something like this intrigues me.
http://www.eham.net/reviews/detail/4286
http://www.universal-radio.com/CATALOG/ht/0060.html

What kinds of things would I be able to listen to with it? How far could I talk/listen?

What license would I need? How tough to get? Pointers to info much
appreciated. Is there a good FAQ to read?

Thanks very much in advance!!! ;-)

Chris

I don't know for sure but it could be associated with the FM capture
effect. In other words the greater local FM repeater signal swamps the
PAVE PAWS radar return signal. Not knowing the sensitivity of the radar
or its ability to select out individual frequencies prevents me from
knowing if this is true or not.

Chris

That radio is VHF/UHF, so normally, it is approximately line of sight. There are repeaters all over that significantly extend "line of sight", but just how much depends on where you are, the phase of the moone, etc.

The licensing depends on where you are. In the U.S., you need a Technician class license which requires you to take a test mostly about regulations. It isn't too tough. There is a fee to take the test on the order of $20 or so but it keeps changing. The license is good for 10 years, and renewals are (currently) free. In other countries there are different rules.

..

Bittorrent doesn't *require* inbound connections, but you end up with more links and it works better if they are allowed. The client I'm using for bittorrent does the automatic router configuration thing (Universal Plug and Play I think) and I see inbound TCP connections to the client so inbound connections don't seem to be the issue (at least for TCP ports that bittorrent uses.)

It's already been fun talking to tech support and I have yet managed to get anybody on the phone who knows the difference between TCP and UDP.

I wonder if it would be worth the effort to ask the EchoLink developers if they can put in the Universal Plug and Play feature in? Then all this router configuration difficulty will go away (or at least most of it will.)

Quoting from an ARRL news release

.. On Saturday, May 17 at the Dayton Hamvention, ARRL President
.. Joel Harrison, W5NZ, plans to announce that the League will expand
.. its identity program to include greater emphasis on technology.
.. Harrison explained that "Ham radio operators, and particularly
.. ARRL members, closely identify with current and emerging radio
.. technology. Today, we are naming 'technology' as ARRL's new
.. fifth pillar."

If ARRL will put enough weight into this idea that it can gain traction, I feel this may be the key to a renewed health for our hobby.

What can we do to help?

==> ARRL INTRODUCES "FIFTH PILLAR" AT DAYTON HAMVENTION

On Saturday, May 17 at the Dayton Hamvention, ARRL President Joel Harrison, W5ZN, plans to announce that the League will expand its identity program to include greater emphasis on technology. Harrison explained that "Ham radio operators, and particularly ARRL members, closely identify with current and emerging radio technology. Today, we are naming 'technology' as ARRL's new fifth pillar." ARRL's other four pillars, the underpinnings of the organization, are Public Service, Advocacy, Education and Membership. "For hams, expanding the four pillars to include technology will reinforce one of the organization's guiding principles -- that ham radio is state-of-the-art, innovative and relevant," he said.

"Radio amateurs have entered a new era. More than a dozen Amateur Radio satellites are presently in orbit with more to come. Software is expanding the capabilities of their radio hardware and communication by digital voice and data is expanding rapidly among hams," Harrison said.

In addition to the new fifth pillar, the ARRL has launched a year-long ham radio recruitment campaign emphasizing the Amateur Radio Service as a scientific national resource. The campaign invites newcomers to discover ham radio in the 21st Century -- where hams are using science, technology and experimentation to explore the radio spectrum. "For more than 90 years, the ARRL has been at the forefront of technology, encouraging experimentation and education through its license training resources, publications and periodicals. ARRL provides its members with top-notch technical information services, trusted product reviews and radio spectrum advocacy," Harrison said. "The ARRL Laboratory is a centerpiece of ham radio technology, contributing to radio electronics experimentation, spectrum development and advocacy, and radio frequency engineering."

Harrison also noted that many hams attribute their affinity to "Amateur" Radio as launching their professional careers in radio engineering, satellite communications, computer science and wireless communications.

"This is less about defining a new course for Amateur Radio, but simply recognizing a course that has always been a precept of radio amateurs and the ARRL," he said. Referring to the federal rules and regulations for Amateur Radio, Harrison explained that one of the defining principles of the Service's very creation by the government is the amateur's proven ability to contribute to the advancement of the radio art. Harrison remarked, "Today's technology is nothing new to ham radio!"

==> HAMS CALLED TO ACTION IN AFTERMATH OF CHINA QUAKE

On Monday, May 12 at 0628 UTC, a magnitude 7.8 earthquake hit Sichuan, China. According to the Chinese Radio Sports Association <http://www.crsa.org.cn/english.php>, the Chinese IARU Member-Society, has designated the following frequencies for emergency services involved in the rescue: 14.270, 7.050 and 7.060 MHz. The ARRL encourages US amateurs to be aware of the emergency operations on those three frequencies.

The CRSA Web site reports the following:

"On the afternoon of May 12, 2008, Wenchuan Area of China's Sichuan province was struck by an earthquake. Communications in some of the surrounding areas are currently cut off, and communications in some other areas are experiencing network congestion because of drastically increased traffic.

"Chinese Radio Sports Association therefore calls on its members to take actions to ensure their amateur radio stations to operate properly, and to the extent possible stand by on often used short-wave frequencies. If any radio signal is heard from the disaster area, please do your best to understand what is most needed by people in that area and report it to the local government authority. If people in the surrounding areas need to pass messages to their loved ones over the radio, please help them to get in touch and get the messages across as soon as possible.

"Amateur radio stations in the disaster area and surrounding areas if in working conditions should be used unconditionally to assist the local earthquake disaster relief authorities, and subject to permission by the said authorities, to provide communications services to them. For emergency communications purposes, amateur radio stations may also be used to pass messages for local residents on a temporary basis until local telecommunications services resume. Amateur radio stations of all regions should give way to and stand by for emergency communications."

At 1757 UTC on Monday, May 12, Liu Hu, BG8AAS, of Chengdu, a town in the province of Sichuan, reported that a local UHF repeater survived the disaster. "It keeps functioning from the first minute and more than 200 local radio hams are now on that repeater. A group of hams from Chengdu has headed for Wenchuan, the center of the quake, trying to set up emergency communication services there," he said.

Michael Chen, BD5RV/4, said that Yue Shu, BA8AB, also from Chengdu, Sichuan, was reported to be active on the 40 meter emergency frequency on Monday. "Up to now, there has been no further information available from the center zone of the quake. There are a few radio amateurs there, but all of the communications have been cut out, including Amateur Radio," Chen said.

At 1858 UTC, Liu reported that the local UHF repeater in Chengdu "keeps busy running after the quake. It helps to direct social vehicles to transport the wounded from Dujiangyan, Beichuan and other regions. Another UHF repeater also started working in Mianyan, supported by generators, but they are going to face a shortage of gas." Chen said that damage in Chengdu remains in the lowest level, but the situation is "very very bad in the counties around. A few towns are said to be destroyed completely. More than 7000 died in the town of Beichuan. Casualties in several other towns are still unknown and not counted in the published numbers. It is a long and sad day."

At 0831 UTC on Tuesday, May 13, Chen said that a group of radio amateurs is now transmitting from Wenchuan, the center of quake: "Its signal is reported to be very weak. They tried to keep communication with BY8AA, the Sichuan Radio Orienteering Association in Chengdu, seeking for all resources needed. During a contact finished a few minutes ago, they were asking for raincoats, water, tents and outdoor living facilities." -- Information provided by Michael Ye, BD4AAQ, and Michael Chen, BD5RV/4

==> TORNADOES SWEEP ACROSS MIDWEST, SOUTHEAST US

On May 9 and 10, a series of tornadoes swept across the Midwest and Southeast United States. Throughout the storms, Amateur Radio operators who had received the call for assistance responded promptly. An EF2 tornado blew through Stafford County, Virginia on May 9, causing damage to more than 140 homes. On May 10, Picher, a town in the upper northeast corner of Oklahoma, received the brunt of another storm system: an EF4 tornado zoomed through the town, killing six Picher residents. National Weather Service (NWS) officials said the Picher tornado was 1 mile wide at its widest point with wind speeds of 165 to 175 miles per hour. The damage from the Picher storm system extended into Missouri and Georgia, and 22 fatalities are blamed on that storm, 15 in Missouri alone; the Picher storm spawned five twisters in Oklahoma and two in neighboring Arkansas.

An EF2 tornado cut a 4-mile swath through Stafford County on Thursday, May 8. According to Stafford County Emergency Coordinator Curt "Bart" Bartholomew, N3GQ, ARES members handled more than 100 traffic messages during the surge. The American Red Cross, the Stafford Sheriff's Office, the Stafford Sheriff's Office 911 Center and the Stafford Emergency Management Division all received communications support from ARES, and ARES members set up a SKYWARN net 9 PM, May 8 to 1 AM, May 9.

Spotsylvania County Emergency Coordinator Tom Lauzon, KI4AFE, reported that the Rappahannock Area Chapter of the American Red Cross requested ARES support for communications between their headquarters in Massaponax (in the Fredericksburg/Spotsylvania area) and nearby Gayle Middle School in South Stafford County. "The radio room at the Red Cross, K4TS, was staffed from 7:30 AM-6 PM on Friday, May 9," Lauzon said.

At least 160 houses were damaged in a Stafford County neighborhood, said County Administrator Anthony Romanello, including 30 that have been declared a total loss. Stafford County Fire Chief Bob Brown estimated the damage at more than $15 million. Residents said the tornado blasted in at about 10:30 PM Thursday amid a "lurid red-and-green sky laced with lightning that sent many rushing into their basements, " Romanello said.

The Stafford County tornado was one of two that struck Virginia as thunderstorms rolled northeast across the state Thursday night and Friday morning. The NWS confirmed that a smaller tornado, producing 86 to 110 MPH winds, struck Henry and Franklin Counties south of Roanoke about 8 PM Thursday. In addition, straight winds of about 100 MPH damaged several buildings along a mile-long path in Spotsylvania County and Fredericksburg, the weather service said. In central Virginia, the storms flooded some roads and toppled trees. The storms dropped an estimated 1 to 5 inches of rain in central Virginia, and possibly more in places.

In Oklahoma, ARRL Oklahoma Assistant Section Emergency Coordinator Mark Conklin, N7XYO, said served agencies were contacted and ARES groups in the area were placed on standby status: "Amateur Radio SKYWARN spotters were very busy and were of great help to the National Weather Service office in Tulsa during the storm events."

Ottawa County Emergency Management said that homes, businesses and vehicles were destroyed in a 20-square-block area at the south end of Picher. In some cases, only a home's concrete slab remains. The storm also downed power lines, utility poles and trees. The Oklahoma Corporation Commission reports about 6300 homes and businesses are without electric service due to the storms. The American Red Cross opened a shelter at the First Christian Church in Miami.

Once a boom town of about 20,000, Picher's population had dwindled to about 800 after waste from lead and zinc mines turned the area into an environmental disaster and Superfund site. Oklahoma Emergency Management Director Albert Ashwood said the Federal Emergency Management Agency (FEMA) is unlikely to grant assistance to homeowners to rebuild in the town. Jeff Reeves, 43, who has followed his grandfather and father as Picher's fire chief, has lived in Picher all his life and has watched it slowly decline. He told reporters, "With everything else that's going on here, I'm not sure there is a recovery."

==> DAYTON UPDATE

Crowds have been enthusiastic on this, the opening day of the Dayton Hamvention. Thursday evening featured the ARRL Donor Recognition Reception that honored those who have made a significant financial contribution to the ARRL. If you didn't make it to Dayton this year (or even if you did), you can follow the action on the ARRL blog <http://www.arrl.org/blog/Dayton%20and%20ARRL%20Expo>. An update will also be posted to the ARRL Web site during the weekend, and a comprehensive article will appear in the July issue of QST.

==> "THE DOCTOR IS IN" THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Question -- Mel, Snyder, K8MIW, of West Olive, Michigan, asks: I have a question about feeding a folded dipole, spaced about 5 inches between wires. What would be the difference between feeding it with the usual 300 ohm twin lead and using the popular 450 ohm window line as a feed line? I operate mostly on 75 meters. Years ago I used a folded dipole and found it to be an effective and wide band antenna. I have heavy duty window line on hand, but would have to buy the twin lead and the only line I can find is light duty line. Would the mismatch with the 450 ohm line cause any problems?

The Doctor answers -- The most significant difference would be the level of mismatch at the transmitter end. If you are using an antenna tuner, I doubt that you will notice any difference at all.

There will actually be slightly less loss with the 450 ohm (usually closer to 400 ohm in my experience) line. Let's see, if the antenna is about a quarter-wavelength high, the actual feed impedance will be closer to 200 ohms than to the free space value of 300 ohms. With 300 ohm line that results a 1.5:1 SWR at resonance, or 2:1 with 400 ohm line.

I would go ahead and use the window line. It should be less bothered by rain and will probably last longer. If your tuner has a problem at any frequency you operate at, try changing the feed line length by 20 feet or so and see what happens -- you are likely to find a length that works across the band. Just don't roll up any excess. In my cellar shack, I usually put any excess window line between the overhead floor joists, away from other wires and secured with TV standoff insulators.

That should be a great antenna! You may even be able to tune it on other bands, if you have a wide range tuner -- especially 30 meters. On that band, the window line will make even more of an improvement.

==> RONALD A. PARISE, WA4SIR (SK)

Dr Ronald A. Parise, PhD, WA4SIR, passed away Friday May 9, 2008 after a very long and courageous battle with cancer. He was 57. Parise flew as a payload specialist on two space shuttle missions: STS-35 on Columbia in December 1990 and STS-67 on the Endeavour in March 1995. These two missions, ASTRO-1 and ASTRO-2, respectively, carried out ultraviolet and x-ray astronomical observations, logging more than 614 hours and 10.6 million miles in space. Parise was one of the first astronomers to operate a telescope from space, making hundreds of observations during the mission. Amateur Radio on the International Space Station (ARISS) Chairman Frank H. Bauer, KA3HDO, said Parise's personal contributions to these two missions provided scientists with "an unprecedented view of our universe, expanding our understanding of the birth, life and death of stars and galaxies." Information on ARISS can be found on the ARISS Web site <http://www.rac.ca/ariss/oindex.htm>.

First licensed when he was 11, Parise kept Amateur Radio at the forefront of everything he did, including his operations from space. During his two shuttle flights, he spoke with hundreds of hams on the ground. He was instrumental in guiding the development of a simple ham radio system that could be used in multiple configurations on the space shuttle; as a result, his first flight on Columbia ushered in what Bauer called the "frequent flyer era" of the Shuttle Amateur Radio Experiment (SAREX) payload <http://www.arrl.org/ARISS/sarex-past.html>. He was the first ham in space to operate packet radio. "His flight pioneered the telebridge ground station concept to enable more schools to talk to shuttle crew members despite time and orbit constraints," Bauer said. "In his two shuttle flights, he inspired countless students to seek technical careers and he created memories at the schools and communities that will never be forgotten. Ron was also the ultimate ham radio operator -- in space and on the ground."

Bauer said that Parise's love for Amateur Radio and his love of inspiring students continued well beyond his two shuttle flights: "During the formation of the ARISS program, Ron was a tremendous resource to the newly forming international team. I know of many instances where Ron's wisdom and sage advice was instrumental in helping our international team resolve issues when we reached critical technical or political roadblocks. He was a key volunteer in the development of the ham radio hardware systems that are now on-board ISS. The ARISS team is deeply indebted to WA4SIR for his leadership, technical advice and tremendous vision."

Parise worked hand-in-hand with the students at the US Naval Academy and Embry-Riddle Aeronautical University on the development of their student satellites. He helped develop Radio Jove, a student educational project to listen to the radio signals emanating from Jupiter <http://radiojove.gsfc.nasa.gov/>. Parise spoke at numerous schools over the years, inspiring students to pursue careers in science, math and technology.

"Ron Parise was--and continues to be--an inspiration to countless students, ham radio operators, and friends the world over. His accomplishments were many, including space explorer, pioneer, astrophysicist, pilot, ham radio operator, avionics and software expert, inspirational speaker and motivator, student satellite mentor, husband, father and friend. While he certainly did some truly extraordinary things in his lifetime, Ron Parise is best known and cherished for keeping family and friends first, and for this, we will miss him most," Bauer said.

In an effort to continue Parise's work to inspire the next generation, his family has set up a scholarship fund in Parise's honor for students pursuing technical degrees at Youngstown State University, Parise's alma mater. In lieu of flowers, those interested are welcome to send donations to the Dr Ronald A. Parise Scholarship Fund, Youngstown State University, One University Plaza, Youngstown, OH 44555. -- Information provided by Goddard Amateur Radio Club, WA3NAN

==>SOLAR UPDATE

Tad "Bright as ever shines the Sun" Cook, K7RA, this week reports: We've had another week with no sunspots. Our reporting week for this bulletin runs from Thursday through Wednesday, and this is the fifth bulletin of the year reporting zero sunspots for the week.

Geomagnetic indices were quiet. But next Tuesday, May 20 should be quite active. Predicted planetary A index for May 16-22 is 5, 5, 5, 12, 30, 15 and 8. Geophysical Institute Prague expects quiet conditions May 16-18, quiet to unsettled May 19, active geomagnetic conditions May 20, unsettled May 21, and quiet to unsettled May 22.

Sunspot numbers for May 8 through 14 were 0, 0, 0, 0, 0, 0, and 0 with a mean of 0. 10.7 cm flux was 66.4, 67.3, 67.4, 68, 68, 68.3, and 69 with a mean of 67.8. Estimated planetary A indices were 4, 3, 5, 3, 4, 4 and 3 with a mean of 3.7. Estimated mid-latitude A indices were 3, 3, 4, 3, 3, 3 and 1, with a mean of 2.9.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, look for another running of the NCCC Sprint Ladder on May 16. The Feld Hell Sprint is May 17. On May 17-18, be sure to make room in your schedule for the EU PSK DX Contest, His Majesty King of Spain Contest (CW), the Manchester Mineira All America CW Contest and the Baltic Contest. The Run for the Bacon QRP Contest is on May 19. The RSGB 80m Club Championship (CW) and the NAQCC Straight Key/Bug Sprint is on May 22. Next weekend is VK/Trans-Tasman 80m Contest (CW) on May 24. The CQ WW WPX Contest (CW) is May 24-25. The MI QRP Memorial Day CW Sprint is May 27. The MI QRP Memorial Day CW Sprint is May 26-27. The ARCI Hootowl Sprint is May 27 (local time) and the SKCC Sprint is May 28. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 25, 2008, for these online course sessions beginning on Friday, June 6, 2008: Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News on Friday, May 16: There will be no ARRL Audio News on Friday, May 16. ARRL Audio News will return on Friday, May 23.

* W1HQ Snake Gets Name, Call Sign: With more than 400 votes tallied, the W1HQ snake finally has a name <http://www.arrl.org/news/stories/2008/02/21/100/>. Sean Kutzko, KX9X, president of The Laird Campbell Memorial HQ Operators Club W1HQ, announced that the snake not only has a name, but a call sign, as well: "Members of the club met over lunch to discuss and vote on all the names that were sent in. The winning entry came from Charlie Liberto, W4MEC, of Hendersonville, North Carolina. He, along with former ARRL staffer R. Dean Straw, N6BV, submitted the name Hamaconda. Paul Trotter, AA4ZZ, of Charlotte, North Carolina, submitted H1SS as a name. We liked the idea of the snake having a call sign, so the club decided, out of all the great names and call signs sent in, that Charlie's and Paul's submissions fit our mascot perfectly." Both Liberto and Trotter will

receive a copy of "The ARRL Antenna Book." Kutzko, the ARRL Contest Branch Manager, was voted in as president of the HQ club at the meeting. ARRL Membership Manager Katie Breen, W1KRB, was selected as vice-president. ARRL Lab Manager and W1HQ Trustee Ed Hare, W1RFI, was selected as the club's technical officer, and ARRL MVP Associate/Production Assistant Carol Michaud, KB1QAW, was selected as club secretary.

* 2008 ARRL Photo Contest Deadline Approaching: Photos submitted for the 2008 ARRL Photo Contest will be accepted through Saturday, May 31. Send your photo (one per entrant) as an e-mail attachment to qst@arrl.org with the subject line "2008 ARRL Photo Contest." Digital photos should be high-resolution. Prints can be mailed to 2008 ARRL Photo Contest, 225 Main St, Newington, CT 06111.

* The National Weather Service has announced a Web page for hams and others to report outages of the NOAA Weather Radio All Hazards Transmitters (NWR). The Web page <http://www.weather.gov/nwr/outages.html> explains how to report a transmitter that may be off air in a listener's area. -- Joe Lachacz

==

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:

ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline(tm) Report 1605 - May 16, 2008

CLOSED CIRCUIT FINANCIAL REPORT

The following is a closed circuit announcement. Ladies and gentlemen, a few words from the Amateur Radio Newsline support fund administrator

Andy Jarema, N6TCQ:

--

Yep, its me. A.J. And if I'm here you likely suspect that once again the Amateur Radio Newsline is in desperate need of your financial support. And you would be right.

We know you prefer to hear the news rather than having to listen to these announcements and we agree. But over the past few months almost all donations have ceased so here we our with our annual spring pitch.

As we have said so many times before, it takes money to gather the news. It takes money to assemble a newscast and it takes money to bring it to you. And as the price of goods and services continue to increase so do our operating costs. The cost of telephone service. The cost of web access. The costs related to hosting our website and providing you with download F-T-P of the newscast. The coat of equipment repair and upgrade. In essence, all of the costs involved in bringing you 52 newscasts a year as we have done for almost 31 years.

We do our very best to keep operating expenses to a minimum. Everyone involved in the Amateur Radio Newsline is a volunteer. There is no paid staff.

More important, all of the monies you donate go only toward operating expenses and in supporting the Young Ham of the Year Award. And for you, your donation is tax deductible.

We even make it very easy to donate. If you have web access all you need to do is take your web browser to www.arnewsline.org. Then click on the words "Make A donation" and use your Pay-Pal account or credit card to transfer into ours.

Or you can use the good old method of writing a check and sending it to Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Either way, we thank you for your kindness. For your support and for your trust.

For the support fund, I'm Andy Jarema, N6TCQ.

--

Thank you Andy.

Amateur Radio Newsline report number 1605 with a release date of Friday, May 16th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The Seeds ham radio cubesat sends its first SSTV back to Earth, a big rescue radio conference is planned for

Canada and Hamvention 2008 opens in Dayton. Find out what's happening this year on Amateur Radio Newsline(tm) report number 1605 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: FIRST SSTV FROM NEW SEEDS HAM RADIO CUBESAT

The first Slow Scan Television pictures have been received from the Seeds cubesat satellite which was one of 7 successfully launched launched on April 28th. JN1GKZ reports that he was one of the first to successfully copy and record an SSTV image from Seeds and has put it on his website. PA3GUO adds that he too has received a Seeds SSTV transmission along with that of the satellites digi-talker. Heres what it sounded like at his QTH:

--

Actual Sound here

--

The Seeds cubesat transmits on a frequency of 437.485 MHz using either CW running 110 milliwatts or FM at 450 milliwatts output. It sends only one stored SSTV picture about every two minutes when the satellite is in digi-talker mode.

More about Seeds is on-line http://cubesat.aero.cst.nihon-u.ac.jp/english/blog.html (ANS)

**

RADIO LAW: FCC TURNS AWAY PETITION TO LIMIT HF DIGITAL MESSAGING

The FCC has turned away a rule making request from Mark Miller, N5RFX, of Arlington, Texas. In his petition Miller has asked the Commission to delete the 2006 addition as to how it defines data. He also wanted to amend the rules to prohibit automatically controlled stations from transmitting in band segments other than those specified in Section 97.221(b), and replace the symbol rate limits in Section 97.307(f) with bandwidth limitations.

In denying all three aspects of the N5RFX request, the FCC said that Miller had not set forth sufficient reasons for the agency to approve his petition. It did however note that if future actual on the air operational experience substantiate his concerns, that he may file a new, factually supported petition for rulemaking.

Miller's petition was endorsed mainly by hams who oppose unattended wider bandwidth digital messaging systems on the High Frequency bands.

It was opposed by the proponents of unattended automated digital messaging who saw its adoption as an impediment to establishing emerging modes.

The opposition mounted a rigorous campaign that included using a website with sign and send opposition letters. In its finding the FCC took note of the cookie cutter responses that come from websites where people can go to submit canned responses and indicated that it discounts their importance in the overall decision making process.

Even so, it appears that Miller did not provide the FCC with enough factual material to make his case and the rules as now written will remain. (FCC)

**

PUBLIC SERVICE: PA CLUB PRAISED FOR IS MARATHON COMMS

Radio communication was not behind the scenes at Pennsylvania's Run for the Red Marathon on May 5th. According to the Poccono Record, it was right in the middle of the event as a primary communications conduit.

According to the newspaper, members of the Eastern Pennsylvania Amateur Radio Association are every two miles along the marathon route. From running out of cups at stop No. 7 to reporting twisted ankles and pulled muscles, the 30 member ham radio group is totally focused on communicating the needs of the event.

Jerry Truax, N3SEI, of Bartonsville is the county emergency coordinator for amateur radio. He says the group volunteers during emergencies as well as at special events. The Eastern Pennsylvania Amateur Radio Association's next public service event is communications for the Black Bear triathlon June 1st.
(Poccono Record)

**.

RESCUE RADIO: EMERGENCY RESPONSE PLANNING CONFERENCE IN TORONTO IN JUNE

The Emergency E-Mail and Wireless Network will partner in the sponsorship of the 18th World Conference on Disaster Management that slated for June 15th to the 18th in Toronto, Canada. This conference is considered to be one of the most intense information exchange gatherings you can attend with over 85 workshops, plenary and breakout sessions. Some 120 organizations will be there showcasing products to help mitigate prepare for, respond to and recover from emergencies and disasters. Its also an opportunity to network with Disaster Management professionals worldwide. More about the gathering is on-line at www.emergencyemail.org (emergencyemail.org)

**

RADIO ADVENTURE: DESPITE STORM VA7MLW WILL CONTINUE VOYAGE AROUND THE WORLD

A Canadian Radio Amateur aboard a damaged sailboat is nursing concussion after being rolled over in the turbulent South Atlantic Ocean. But Glenn Wakefield VA7MLW of Victoria British Columbia says he has no intention of giving up an unusual solo voyage around the world.

Wakefield reported via ham radio from his 12-metre sailboat off the Falkland Islands that the May storm he was inn was expected to subside within 3 days after which he would head toward Port Stanley in the Falkland Islands. That was back on May 6th U-T-C time. Wakefield added that until the weather cleared he would just have to endure whatever Mother Nature sent his way.

A carpenter with two grown daughters, Wakefield sailed from Victoria on September 23rd of 2007. His intention was to become the first North American to circumnavigate the world westbound into prevailing winds that whirl around the bottom of the planet, rather than with the wind as is conventionally done.

VA7MLW is sailing a Phil Rhodes designed Offshore 40 foot sloop called the Kim Chow. It was built by Cheoy Lee in Hong Kong in 1969. For more than 4 years, Wakefield has been making extensive modifications to Kim Chow, preparing the vessel for the rigors of sailing offshore for approximately 10 months. More about Wakefield's journey is on-line at www.kimchowaroundtheworld.com (BC News OnLine)

**

HAMVENTION 2008: THE DOORS OPEN

As we go to air, the doors are opening at the HARA arena in Dayton, Ohio for the 2008 Hamvention. And according to the events Assistant General Chairman Michael Kalter, W8CI, this years Hamvention has a very simple theme:

--

Kalter: "This year the theme is amateur Radio plus people equals fellowship"

--

Kalter goes on to explain that Hamvention has always been dedicated to bringing people together, so why not make this the years centerpiece:

--

Kalter: "Most all of us involved in Amateur Radio have made friends in Amateur Radio. We enjoy the hobby together and we enjoy doing things together. It may be a special event or a critical situation and we have learned how to work together. That's fellowship.

Hamvention is a place where we see people. Sometimes it's the only time for a whole year. And we have clubs come. We have people from all over the world. People that you might keep skeds with in other parts of the world or other parts of the country. Here you get to see them face to face, eyeball to eyeball. And that's what Amateur Radio is and its what the amateur community does. It's a service and by doing that kind of a service it takes people and that's what creates the fellowship. That's how we see it."

--

**

HAMVENTION 2008: THE ARRL AND ARRL EXPO

So what can a visitor expect this year? Lets start with the American Radio Relay League. As it previously announced, the ARRL is at Hamvention along with its annual ARRL EXPO. That's over in the Ballarena Hall area.

The Leagues Membership Manager and ARRL EXPO Coordinator is Katie Breen, W1KRB. She days that the League will have many new publications and apparel items that it is proud to introduce.

And no ARRL booth at Hamvention would be complete without the annual release of the ARRL Repeater Directory. New for the 2008/2009 edition are the handy indexing tabs on the cover so you can quickly find the listings you're looking for. The Directory has new easier-to-read listings because the pocket-sized edition is actually one-half inch bigger."

**

BREAK 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Hamvention repeater, W8BI, serving Dayton Ohio

(5 sec pause here)

**

HAMVENTION 2008: THE DOCTOR IS IN

A new area within the ARRL EXPO this year is the interactive "Doctor Is IN" booth. Its based on the QST column of the same name and everyone always wants to know who is behind the costume. This year attendees with have a chance to stop by the booth, ask question and have some one-on-one time with ARRL's Technical Experts. You might even be able to submit a stumper and get it published in QST.

This year's Docs On Call will be QST Contributing Editor Ward Silver, N0AX; QEX Editor Larry Wolfgang, WR1B; ARRL Senior Technical Editor Joel Hallas, W1ZR; QST Editor Steve Ford, WB8IMY, and ARRL RF Engineer Mike Gruber, W1MG.

**

HAMVENTION 2008: SOMETHING OR THE YOUNG

Hams in their early years are not being left out. Again, Hamvention Assistant General Chairman Michael Kalter, W8CI:

--

Kalter: "The Dayton Amateur Radio Association along with the ARRL is sponsoring a dinner for youth that will be held at the Dayton Amateur Radio Association clubhouse which is a very nice place to come and visit. That will be occurring on Saturday evening.

"On Friday evening we will be holding a general 'open house' to the general public from 6 to 9 PM. Its not to far from the Hara Arena and will be another exciting thing occurring this year."

--

Kalter says that he hopes as many folks as possible attend these two events. (ARNewsline(tm))

**

HAMVENTION 2008: THE ARRL MOVIE ROOM

Back at the Hara Arena, the ARRL will also sponsor a new Movie Room. This, as a new feature of this year's ARRL EXPO. Planned so far is a presentation on "60 Years of the Worked All Europe Contest." It will be presented by DJ3HW, and DL7RBI, of the Deutscher Amateur Radio Club. That's the German equivalent of ARRL.

The movie room will also screen a variety of DXpedition videos. The highlight will be with Bob Allphin, K4UEE. He will host an interactive session along with the showing of the video of the Peter One DXpedition to the Antarctic. (ARRL)

**

HAMVENTION 2008: ICOM PRESENTS D-STAR THE MOVIE

And speaking about video presentations, word of a new A new D-STAR promotional video is available on the ICOM Global website just in time for Hamvention 2008. There are two versions of the video are available to download. One is targeted at Europe, with the the other aimed at North America and the rest of the world. The video provides an introduction to D-STAR and explains the features available. Look for it at the Icom booth. If you cant make it to this years Hamvention you can download one or both at from http://www.icom.co.jp/world/products/video/d-starmovie/ (Icom)

**

HAMVENTION 2008: HEIL SOUND INTRODUCES TWO NEW MICS

Bob Heil, K9EID and Chip Margelli, K7JA, of Heil Sound, Ltd. are here. They and the bunch at the Heil Sound booth will be introducing the new microphones at this years Dayton Hamvention. First up is the PR 35 which features a large 1.5" diameter diaphragm in a dynamic microphone that outperforms condenser microphones.

The PR 35 was actually a product that songstress Joan Baez asked Bob Heil to build for her. This, after hearing the large diaphragm PR 30. It has a two stage bass roll off switch that allows you to tailor the low end response right at the microphone. The large element is in a very special internal shock mount and comes in an aluminum travel case.

Also being released at Dayton is the PR 781. Its based on the PR 780 that was designed for the Icom 7800 introduction project, the PR 781 is not rig specific. With the right accessories, it works well into any transmitter from a 1956 Harvey Wells to a brand new transceiver like the Yaesu FT 9000, Kenwood TS-2000 or what have you.

The new PR 35 and PR 781, along with the rest of the Heil microphone line will be on display in Audio Alley. To find it consult the Hamvention Program guide or simply follow the Hamvention crowds. More on what's new in ham radio products at Dayton in next weeks Amateur Radio Newsline report. (Heil Sound)

**

HAMVENTION 2008: SOFTWARE DEFINED RADIO FORUM

Turning to this years forums, one we think will receive a lot of attention is on the phenomenal paradigm shift toward Software Defined Radio. One that continues with a significant number of "off the shelf' as well as amateur radio designed hardware offerings.

What's interesting is that its computer programmers are fueling this fire and at the Software Defined Radio Forum attendees will get to hear some of the leaders in this movement describe the vast potential of this rapidly advancing technology.

This forum will also give an overview of some Software Defined Radio projects and show those attending how to get started. Topics will include Basic Software Defined Radio architecture, S-D-R Software and

Software Defined Radio computer hardware requirements

Moderated by Eric Ellison, AA4SW, the Software Defined Radio Forum is on Saturday May 17th at 9 a.m. in Meeting Room 1 (Hamvention)

**

HAMVENTION 2008: NFCC WILL UPDATE FREQUENCY MANAGEMENT

If you are a repeater owner or even a concerned user, you won't want to miss the he National Frequency Coordinators' Council open meeting slated for Friday at 9:15 in meeting room 5. The NFCC as its better known was founded a decade ago as the outcome of a meeting between repeater coordinators, the FCC and the ARRL. It has as its members the majority of frequency coordination bodies in the United States. Moderated by NFCC Chairman Jay Maynard, K5ZC, this forum will update those interested in frequency coordination on the current status of the organization and spectrum management activities in the Amateur Radio service. (NFCC)

**

HAMVENTION 2008 - NEWSLINE BRINGS A TRIP BACK IN TIME

Amateur Radio Newsline will once again host this years Hamvention Town Meeting on Saturday, the 17th. This year with a look back in time.

As ham radio flings itself headlong into the so-called "digital revolution of the 21st century we will pause for a moment to take a look at the hobby over the past half-century to see where it was in the latter 1950's through the mid 1990's.

Our keynote speaker will be Dave Bell, W6AQ, who will host a screening of his 1969 award-winning 28 minute film "The Hams Wide World." This will be the first public showing of the movie in over a quarter of a century and something nobody will want to miss.

As to the rest of the session, its based on the generally accepted fact that most of the change that lead ham radio to the hobby we know today began in the 1960's and continued through to the end of the 20th century. The speakers you will hear all were "kid hams" or "teen hams" in the 1950's. Most got licensed in that era and lived though tubes giving way to solid state; SSB coming into its own H-F; F-M and repeaters on 2 meters replacing point to point A-M on 6 meters and early home-built computers replacing mechanical RTTY systems.

They and many of you were also observers as the long traditional equipment names like Hallicrafters, Hammerlund, Heathkit, and even Collins Radio peaked and then gave ground to newcomers from across the Pacific. Those bearing company names Inoue Communications, Trio and Yaesu. Companies now known a Icom, Kenwood and Yaesu.

In this session you will find out what it was like to study for and take your exam when it was still given at a local FCC field office. What it was like to assemble your first station and in some cases building some or all of it. And you will get a trip down memory lane to when kits were king and find out how being a kid ham back then affected our panel's lives and careers.

We sincerely hope that you will enjoy this trip back through time brought to you by the 2008 Dayton Hamvention and the Amateur Radio Newsline in Meeting Room 3 beginning at 11:30 a,m. We hope to see many of you here.

A full report on Hamvention 2008, in next weeks Amateur Radio Newsline report. (ARNewsline(tm))

**

EMERGING TECHNOLOGY: HAMSPHERE - THE VIRTUAL TRANSCEIVER

Something new on the World Wide Web of interest to ham radio is HamSphere. If you haven't of HamSphere it is best described as an artificial shortwave radio based on the natural laws of radio propagation. One that lets members talk around the world with both ham operators and unlicensed users using a virtual transceiver. You can find about this project on line at www.hamsphere.com. (Southgate)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: ORGANIC BASED CARBON MOLECULES

University of Pittsburgh scientists have discovered that certain organic molecules exhibit the properties of atoms under certain circumstances and, in turn, conduct electricity as well as metal.

The research group found that the hollow, soccer-ball-shaped carbon molecules known as fullerenes can hold and transfer an electrical charge much like the most highly conductive atoms. When an electron was introduced into a fullerene molecule, the shape of the electron distribution mimicked that of a hydrogen atom or an atom from the alkali metal group, which includes lithium, sodium, and potassium. Moreover, when two fullerenes were placed next to each other on a copper surface, they showed the electron distribution of their chemical bond and appeared as H2, a hydrogen molecule. The assembly exhibited metal-like conductivity when the team extended it to a wire 1-molecule-wide.

Detailed in the April 18th edition of the magazine Science, the finding is a breakthrough in developing nano-technology. One that provides a new method for designing electronic materials, including inexpensive and multifunctional organic conductors that have long been considered the key to smaller, cheaper, and faster technologies. (Science OnLine)

EMERGING TECHNOLOGY: UPDATE ON HD RADIO ROLLOUT

The number of big-market stations turning on High Definition Radio in the past year fell off, while the number of stations in markets 51 to 100 held more steady.

According to an analysis from BIA Financial Network prepared for the Radio World HD Radio Scoreboard, 26 stations in the top 10 markets added HD Radio through mid-December 2007. This, compared to 76 the year before and 117 the year before that.

By contrast, there were 118 stations in markets 51 to 100 turning on HD Radio last year. That, compared to 124 the prior year and 111 in 2006.

One likely reason for the disparity is that proponents of HD Radio started with the bigger markets when they launched their rollout, though by no means are all big-market stations now converted. (RW)

ON THE AIR: THE PORTUGAL LIGHTHOUSE ACTIVITY

Members of the Portugal's Algarve DX Group will activate 7 lighthouses simultaneously between May 31st and June 1st. Operations will take place on 40, 30, 20 and 17 meters. There may be some operations on 80 and 15 meters and plans seem definite to include at least one 6 meter operational from the lighthouse at Santa Maria. The modes used will be CW, SSB and RTTY. A free award will be issued to any who contacts all 7 special lighthouse callsigns during activity operations. QSL via CT1GFK, by the Bureau or direct. (Southgate)

**

ON THE AIR: HONG KONG CLUB GETS OLYMPIC CALL

Members of the Hong Kong Amateur Radio DX Association have received official permission from the Office Of The Telecommunications Authority authorizing them to use the special event callsign VR2008O for the period between July 15th and August 31st. This, to celebrate the 2008 Beijing Olympics.

Operations will be primarily on 40 through 10 meters and VHF on 6 meters. The modes used will mainly be SSB, RTTY and P-S-K 31. QSL direct only to VR2XMT: Charlie Ho, PO Box 900, Fanling Post Office, Hong Kong.

There will be no e-QSL or Logbook to the Word electronic cards accepted. Preliminary information and QSL card design have been put on line at www.qrz.com/vr2008o (HKARDXA)

**

ON THE AIR: JARL YOSAKOI KOCHI EVENT

The Japan Amateur Radio League, Inc. will be holding their 50th annual Yosakoi Kochi meeting on May 25th. Look for special event station 8-J-50-J-A-R-L to be active now through May 25th to celebrate this gathering . Activity will be on all bands from 160 meters through 1200 MHz, using CW, SSB, FM and AM. QSL via the JARL QSL Bureau. (OPDX)

**

DX

In Dayton Related D-X news, word that the ARRL's DXCC staff and some additional volunteers will be checking cards at the 2008 Dayton Hamvention during all hours of operation on Friday, Saturday and Sunday. ARRL DXCC Manager Bill Moore, NC1L, said, "Many hams travel from all over the world to attend Hamvention, so card checkers are especially busy." Card checkers will be checking cards for DXCC, Worked All States, the VHF/UHF Century Club and Worked All Continents awards.

In other DX news, word that K9ZO and his XYL will be on holiday from Bermuda during July. He expects to be active as K9ZO portable VP9 and also plans to operate the IARU Contest. He will also monitor 30, 17, 12 and 6 meters. QSL as directed on the air.

Further up in frequency the W3HZU Beacons located in Grid FM-19 on 2.4GHZ and 1.2GHZ have been temporarily taken off the air. This, in preparation to add a third beacon on 5.76GHZ. A message on the amsat-bb will advise when the beacons are back in operation.

Last but by no means least, 5Z4DX, will be active from Shanzu Beach through June 11th. Activity will be on all bands and modes. He also plans to possibly activate Wasini Island from May 25th to the 26th and Lamu Island folowing that. QSL direct to Frank Steffen Gast, Eskifirdi, 735 Eskifjoedur, Iceland.

Above from various DX News Sources

HAMVENTION 2008: W5KUB TO PROVIDE LIVE STREAMING VIDEO MAY 14 - 18

And finally this week, if you can't make it to this years Dayton Hamvention, Tom Medlin, W5KUB, has the next best thing. From May 15th to the 18th Tom will being many of this years Hamvention highlights right to your home computer screen via broadband video streaming.

Web transmissions from the Hamvention were slated to begin on Thursday May 15th at Fleamarket spaces 3350 and 3351. Once the show opens on Friday, Tom plans nonstop coverage until closing on Sunday afternoon. Then he invites you to vicariously drive back to his home in Memphis with him. This, as he passes through some of the prettiest countryside that this nation has to offer.

So if you can't be there in person, take your web browser to http://w5kub.com and let Tom Medlin bring the magic of Hamvention 2008 directly to your home computer screen

Again, the U-R-L is http://W5KUB.com. There is also a direct link to Tom's streaming video site from the Dayton Hamvention website at www.hamvention.org. (W5KUB)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year Award ends at midnight on May 30th. Nominations postmarked after that time or received electronically after that time will not be considered. A nominating form as a dot p-d-f file is available at our special Young Ham of the Year website at www dot yhoty dot org. Download it, fill it out and send it to us by U-S mail or electronically.

With special thanks to Hap Holly, KC9RP, for the audio with Michael Kaltee, W8CI and with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

Can anybody give me an idea of what is causing this problem with my IC27A?
(I know its 25 years old,but don't laugh, it's paid for).

I am trying to use the radio through several repeaters that require a CTCSS
(PL) tone to access the repeater.
I do not have this problem with repeaters that do not require a PL.

When I am far away from the repeater I use high power (25W) and the PL.
As I get closer to the machine using Hi power, I get to a point where I
cannot access the repeater using PL and Hi power.
If I cut back to low power (<5w) and PL the radio will access the rptr.
If I move farther away from the repeater at some point I can again access
the rptr on high power.

Dan
AI8O

I think the fastest way to diagnose the actual cause of the problem will be to use a service monitor and/or spectrum analyzer, to look at several aspects of the rig's transmitted signal: RF frequency accuracy, signal deviation level (with PL only, and with PL plus voice), and the cleanliness and frequency accuracy of the PL signal.

I'd tend to suspect one of several problems:

- PL tone is off-frequency, or it's being injected at too high or too low a level (typically, around 700 Hz of carrier deviation is considered optimal).

- PL waveform is distorted.

- RF feedback or some other sort of audio-level stability problem (e.g. parasitic oscillation) is injecting an unwanted audio signal into the modulator, and is swamping out the PL tone.

- RF carrier is off-frequency, causing your signal to fall partway outside the passband of the repeater's receiver, and the resulting noise and distortion is causing the PL detector to drop out.

I'm not sure why your signal problems are worse when the repeater's receiver gets a strong signal - the receiver squelch behavior may change with strong signals (I've seen some which behave this way).

Your rig may need nothing more than a recalibration, or it may have components going bad (e.g. electrolytic filter caps drying out with age, and losing capacity).

In any case, finding somebody who has an accurately-calibrated service monitor is probably the first best thing for you to do.

There isn't anywhere that has an upper edge at 430, Phil. There are countries that only have the middle third of the ham band (430-440) or lesser portions of that part, but none that have only 420-430. However, there are many where hams are secondary users.

73 de Alun, N3KIP, G8VUK

440 is a shared band already, and this device strikes me as an ideal candidate for sharing. It would have at worst a sporadic impact on our use, at low power, and would be a direct contributor to public safety while reducing risk of life and limb to our firefighters and police. This is one ARRL should support.

I think this is a good idea. I'm not so sure that Amateur Radio is unhealthy though.

> What can we do to help?

I'm all about technology. I do want it to be relevant, not just technology for it's own sake.

Good technology:

Getting more people on narrow digital modes.

I still want a PSK31 HT. Young people like to text. Having an HT that can display text that costs nothing beyond the initial cost of the HT, and the cost of charging batteries.

Oh yeah, while we're at it, I don't know if that HT with the camera is still being produced

As much as I prefer regular transceivers, SDR radio would be a pretty interesting way to go. Big hint to the mfgr's: Sell something usable that isn't a kilobuck+. I saw the ones out at Dayton, and a better price point is advised.

Keep on moving with the computer enhanced stuff.

Technology that is so-so.

I've seen a lot about the new Digital voice and data modes such as D-Star. Lots of investment needed there, and although the transmission of data is kinda cool, I have concerns about multipath. Isn't as much of a problem for old school FM. Also while I like the idea of sending data, I think that digital voice is kind of underwhelming, unless we subscribe to the view that "it's digital - It's better".

D-Star might need a big kick start, such as emergency groups purchasing repeaters, and maybe some initial users getting some help. Otherwise people who want to put up a digital repeater (note, not a digipeater) might be going to a lot of expense to talk to one or two friends.

"Relevant" is a moving target, Mike. I think we >>should<< encourage technology "just for it's own sake".

Some percentage (invariably a LARGE percentage) mosly likely will end up no more than a technical curiousity (for the moment, anyhow). But if ARRL can light a technological campfire for us to gather round, even small percentages of PBI's maturing will justify the effort.

None of that is new technology, Mike, just "more of the same old stuff in a different sack". "Texting" and "cameras in an HT" are mass marketed by the millions and already owned by every bubble-gummer in the country who has access to a cheap cell phone!

Hopefully this new "pillar" isn't about hints to >>manufacturers<< defining their product offerings, but about fostering an amateur radio environment which breeds a spirit of experimentation and tinkering among >>amateur licensees<<.

I want to see more pages of ham-authored articles in QEX, not more commercial advertising in QST.

Hopefully this new "pillar" is about petitions to FCC to loosen up our spectrum to new modes and techniques. Back when ARRL/FCC were haggling about how to refarm the so-called "Novice bands", I suggested that they be set up as experimental reservations where forward looking amateurs would be encouraged to try new or unconventional technologies. Instead, FCC copped out and just shuffled some mode-boundaries around.

What an opportunity lost!

Perhaps it's time to send a new copy of my remarks to FCC. See below.

73, de Hans, K0HB
Grand Exhalted Liberator of the Fumes of Solder

Before the
Federal Communications Commission
Washington, DC 20554

In the Matter of)
)
Amendment of Part 97 of the Commission's) RM-10413
Amateur Service Rules Governing)
Operating Privileges)
)

PERSONAL COMMENTS OF HANS BRAKOB, K0HB

OVERVIEW

These comments are in response to the ARRL proposal for "refarming" the existing HF "Novice sub-bands".

I. Discussion:

The ARRL petition does not address the implementation of new technologies as repeatedly requested by the Commission in WT Docket 98-143. It simply proposes to eliminate the Novice segments and reshuffle that spectrum among existing legacy modes. Rather than gain consensus, the ARRL polling method produced a popularity poll among several non-responsive (to 98-143) choices.

Rather than just "more of the same old stuff", I propose that the Commission take this opportunity to provide the Amateur Radio service with a new incentive to concentrate on paragraph 97.1(b) of the Commission's Rules.

> 97.1(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.

While I agree that the declining Novice license population no longer justifies several significant chunks of spectrum as a "reservation" for improving their Morse skills, and that these "reservations" have outlived their regulatory purpose, I propose that we retain these 50-year old "reservations" and convert them to a new purpose which will ensure the future Amateur Radio service continues our "proven ability to contribute to the advancement".

II Proposal:

A. To "de-populate" the current Novice segments, I propose that all Novice (and Technician with code credit) licensees be authorized to use Morse code in the same band segments now authorized for General class licensees.

B. I propose that the current Novice sub-bands be set aside as a new "Experimental Reservation" for non-traditional and experimental modes such as digitized voice, digitized image, and other "forward looking" communications methods.

C. I propose that the current power output level of 200W be retained for those segments, and additionally propose that transmitters in those segments must be equipped with auto-adaptive circuitry to reduce output to the lowest level consistent with reliable communications.

D. I recommend that the Commission grant broad discretion to amateurs operating in this "experimental reservation" as to innovative modulation schemes and non-traditional technologies.

Respectfully,

H. Hans Brakob, K0HB

Keeping in mind that some technology is a dead end.

So much of what we use is not terribly new. Certainly SSB was around a long time before Amateurs adopted it in large numbers. Technology is not just about what is cutting edge, but is often about can be done efficiently and at a good cost. While PSK has been around for a while, availability of computers/soundcards/software to allow Hams to experiment with it was critical to having many adopt it.

The RF world is fairly mature at this point. (please no comparisons to that physicist who said "everything is known") The earth shaking developments tend to come a little further apart these days. I would guess that most new innovations will be incremental, though it would be cool to be proven incorrect on that.

I just don't know how many fundamental breakthroughs will be made by some Ham working in his or her garage.

More to the point in my mature technology outlook is that when something gets to that point, much of the research and innovation needs a fair amount of money put into it to get very far.

I wouldn't argue about your idea. I think it is pretty sensible. There would probably be a lot of hand wringing about it by some folk, I suspect.

In the June Issue of QST Magazine, there is an article mentioned in HamSpeak on page 105 called "Integrating Echolink into a Single Sideband Net.

I have looked thru the magazine several times but cannot find the article. Am I overlooking it or is it not there?

Yes, there were bumps, such as the Flea Market ticket mess, but so what? We got our spot issues cleared up at 8:15 Thursday, got the tents up and the booth set up by noon.

The weather was the best I've seen in YEARS. Sun or high clouds for all 4 days. Cool enough but not cold. It poured rain Saturday night but waited until nightfall to start and stopped well before dawn.

Predicted traffic hassles were not, at least for us...

I bought all kinds of goodies, none big, many small, saw old friends and had a great time. The only downer was the Hotels.Com booking; do not go to the Econolodge on Edwin Moses drive, folks..

There is no technical reason that the frequencies should come from the middle of an already populated amateur band, and I disagree strongly with your assessment that it would have "at worst a sporadic impact". A few repeaters over a wide geographic area should have ZERO impact on a well-designed classified military radar system (designed and built AFTER the repeaters were on the air), but we all know that wasn't true.

This manufacturer has been using non-certified equipment hoping that his squatting in the amateur bands will be forgiven by getting a large number of technically ignorant police departments to cry that they'll be saving lives -- but not cry why they ought to be using spectrum that is already used.

Read the waiver. The claim that this will be strictly for emergency use is disproven by the statements from police departments who want to use this for warrant service and air-duct inspections.

Michael Coslo <mjc5@psu.edu> wrote:
>I still want a PSK31 HT.

My God, why? APRS has a texting mode. The technology is in place and well-defined. A two-second burst of 1200 baud packet, even assuming a 500 ms

TXDELAY, has more text than a standard SMS. That's more than 50 seconds at PSK31. Who's going to install the PSK31 digipeaters? Who is going to develop the technology to determine that a PSK31 signal that is 100Hz off the correct frequency should be digipeated while one that is 50Hz off should not? (1kHz error in an FM HT is common. 1kHz error in PSK31 is a completely different QSO.)

>Oh yeah, while we're at it, I don't know if that HT with the camera is
>still being produced

Ever try sending an image at 1200 baud?

>As much as I prefer regular transceivers, SDR radio would be a pretty
>interesting way to go. Big hint to the mfgr's: Sell something usable
>that isn't a kilobuck+. I saw the ones out at Dayton, and a better price

Volume means low price. High price means no volume. Yeah, a $100 SDR HT would be great. It also has more than $100 of parts in it. That $0.10 diode detector is replaced by a $30 DSP chip.

>I've seen a lot about the new Digital voice and data modes such as
>D-Star. Lots of investment needed there, and although the transmission
>of data is kinda cool, I have concerns about multipath.

But you're the guy who wants texting via PSK31? D-STAR texting, bad. PSK31 texting, good?

>D-Star might need a big kick start, such as emergency groups purchasing
>repeaters,

Sorry, but at $10,000 starting, our emergency group isn't going to be buying one. The fact we have no open repeater space, and the cost of a D-STAR radio, makes it certain that D-STAR is a non-starter here.

>people who want to put up a digital repeater (note, not a digipeater)
>might be going to a lot of expense to talk to one or two friends.

I thought I'd like to buy an ID-1 when it came out. At $3000 (one for me, one for someone to talk to) I said "no thanks".

Amateur Radio Newsline(tm) Report 1605 - May 16, 2008

CLOSED CIRCUIT FINANCIAL REPORT

The following is a closed circuit announcement. Ladies and gentlemen, a few words from the Amateur Radio Newsline support fund administrator Andy Jarema, N6TCQ:

--

Yep, its me. A.J. And if I'm here you likely suspect that once again the

Amateur Radio Newsline is in desperate need of your financial support. And you would be right.

We know you prefer to hear the news rather than having to listen to these announcements and we agree. But over the past few months almost all donations have ceased so here we our with our annual spring pitch.

As we have said so many times before, it takes money to gather the news. It takes money to assemble a newscast and it takes money to bring it to you. And as the price of goods and services continue to increase so do our operating costs. The cost of telephone service. The cost of web access. The costs related to hosting our website and providing you with download F-T-P of the newscast. The coat of equipment repair and upgrade. In essence, all of the costs involved in bringing you 52 newscasts a year as we have done for almost 31 years.

We do our very best to keep operating expenses to a minimum. Everyone involved in the Amateur Radio Newsline is a volunteer. There is no paid staff.

More important, all of the monies you donate go only toward operating expenses and in supporting the Young Ham of the Year Award. And for you, your donation is tax deductible.

We even make it very easy to donate. If you have web access all you need to do is take your web browser to www.arnewsline.org. Then click on the words "Make A donation" and use your Pay-Pal account or credit card to transfer into ours.

Or you can use the good old method of writing a check and sending it to Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Either way, we thank you for your kindness. For your support and for your trust.

For the support fund, I'm Andy Jarema, N6TCQ.

--

Thank you Andy.

Amateur Radio Newsline report number 1605 with a release date of Friday, May 16th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The Seeds ham radio cubesat sends its first SSTV back to Earth, a big rescue radio conference is planned for Canada and Hamvention 2008 opens in Dayton. Find out whats happening this year on Amateur Radio Newsline(tm) report number 1605 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: FIRST SSTV FROM NEW SEEDS HAM RADIO CUBESAT

The first Slow Scan Television pictures have been received from the Seeds cubesat satellite which was one of 7 successfully launched launched on April 28th. JN1GKZ reports that he was one of the first to successfully copy and record an SSTV inage from Seeds and has put it on his website. PA3GUO adds that he too has received a Seeds SSTV transmission along with that of the satellites digi-talker. Heres what it sounded like at his QTH:

--

Actual Sound here

--

The Seeds cubesat transmits on a frequency of 437.485 MHz using either CW running 110 milliwatts or FM at 450 milliwatts output. It sends only one stored SSTV picture about every two minutes when the satellite is in digi-talker mode.

More about Seeds is on-line
http://cubesat.aero.cst.nihon-u.ac.jp/english/blog.html (ANS)

**

RADIO LAW: FCC TURNS AWAY PETITION TO LIMIT HF DIGITAL MESSAGING

The FCC has turned away a rule making request from Mark Miller, N5RFX, of Arlington, Texas. In his petition Miller has asked the Commission to delete the 2006 addition as to how it defines data. He also wanted to amend the rules to prohibit automatically controlled stations from transmitting in band segments other than those specified in Section 97.221(b), and replace the symbol rate limits in Section 97.307(f) with bandwidth limitations.

In denying all three aspects of the N5RFX request, the FCC said that Miller had not set forth sufficient reasons for the agency to approve his petition. It did however note that if future actual on the air operational experience substantiate his concerns, that he may file a new, factually supported petition for rulemaking.

Miller's petition was endorsed mainly by hams who oppose unattended wider bandwidth digital messaging systems on the High Frequency bands. It was opposed by the proponents of unattended automated digital messaging who saw its adoption as an impediment to establishing emerging modes.

The opposition mounted a rigorous campaign that included using a website with sign and send opposition letters. In its finding the FCC took note of the cookie cutter responses that come from websites where people can go to submit canned responses and indicated that it discounts their importance in the overall decision making process.

Even so, it appears that Miller did not provide the FCC with enough factual material to make his case and the rules as now written will remain. (FCC)

**

PUBLIC SERVICE: PA CLUB PRAISED FOR IS MARATHON COMMS

Radio communication was not behind the scenes at Pennsylvania's Run for the Red Marathon on May 5th. According to the Pcccono Record, it was right in the middle of the event as a primary communications conduit.

According to the newspaper, members of the Eastern Pennsylvania Amateur Radio Association are every two miles along the marathon route. From running out of cups at stop No. 7 to reporting twisted ankles and pulled muscles, the 30 member ham radio group is totally focused on communicating the needs of the event.

Jerry Truax, N3SEI, of Bartonsville is the county emergency coordinator for amateur radio. He says the group volunteers during emergencies as well as at special events. The Eastern Pennsylvania Amateur Radio Association's next public service event is communications for the Black Bear triathlon June 1st.
(Poccono Record)

**.

RESCUE RADIO: EMERGENCY RESPONSE PLANNING CONFERENCE IN TORONTO IN JUNE

The Emergency E-Mail and Wireless Network will partner in the sponsorship of the 18th World Conference on Disaster Management that slated for June 15th to the 18th in Toronto, Canada. This conference is considered to be one of the most intense information exchange gatherings you can attend with over 85 workshops, plenary and breakout sessions. Some 120 organizations will be there showcasing products to help mitigate prepare for, respond to and recover from emergencies and disasters. Its also an opportunity to network with Disaster Management professionals worldwide. More about the gathering is on-line at www.emergencyemail.org   (emergencyemail.org)

**

RADIO ADVENTURE: DESPITE STORM VA7MLW WILL CONTINUE VOYAGE AROUND THE WORLD

A Canadian Radio Amateur aboard a damaged sailboat is nursing concussion after being rolled over in the turbulent South Atlantic Ocean.   But Glenn Wakefield VA7MLW of Victoria British Coilumbia says he has no intention of giving up an unusual solo voyage around the world.

Wakefield reported via ham radio from his 12-metre sailboat off the Falkland Islands that the May storm he was inn was expected to subside within 3 days after which he would head toward Port Stanley in the Falkland Islands. That was back on May 6th U-T-C time. Wakefield added that until the weather cleared he would just have to endure whatever Mother Nature sent his way.

A carpenter with two grown daughters, Wakefield sailed from Victoria on September 23rd of 2007. His intention was to become the first North American to circumnavigate the world westbound into prevailing winds that whirl around the bottom of the planet, rather than with the wind as is conventionally done.

VA7MLW is saling a Phil Rhodes designed Offshore 40 foot sloop called the Kim Chow. It was built by Cheoy Lee in Hong Kong in 1969. For more than 4 years, Wakefield has been making extensive modifications to Kim Chow, preparing the vessel for the rigors of sailing offshore for approximately 10 months. More about Wakefield's journey is on-line at www.kimchowaroundtheworld.com (BC News OnLine)

HAMVENTION 2008: THE DOORS OPEN

As we go to air, the doors are opening at the HARA arena in Dayton, Ohio for the 2008 Hamvention. And according to the events Assistant General Chairman Michael Kalter, W8CI, this years Hamvention has a very simple theme:

--

Kalter: "This year the theme is amateur Radio plus people equals fellowship"

--

Kalter goes on to explain that Hamvention has always been dedicated to bringing people together, so why not make this the years centerpiece:

--

Kalter: "Most all of us involved in Amateur Radio have made friends in Amateur Radio. We enjoy the hobby together and we enjoy doing things together. It may be a special event or a critical situation and we have learned how to work together. That's fellowship.

Hamvention is a place where we see people. Sometimes it's the only time for a whole year. And we have clubs come. We have people from all over the world. People that you might keep skeds with in other parts of the world or other parts of the country. Here you get to see them face to face, eyeball to eyeball. And that's what Amateur Radio is and its what the amateur community does. It's a service and by dong that kind of a service it takes people and that's what creates the fellowship. That's how we see it."

--

**

HAMVENTION 2008: THE ARRL AND ARRL EXPO

So what can a visitor expect this year? Lets start with the American Radio Relay League. As it previously announced, the ARRL is at Hamvention along with its annual ARRL EXPO. That's over in the Ballarena Hall area.

The Leagues Membership Manager and ARRL EXPO Coordinator is Katie Breen, W1KRB. She days that the League will have many new publications and apparel items that it is proud to introduce.

And no ARRL booth at Hamvention would be complete without the annual release of the ARRL Repeater Directory. New for the 2008/2009 edition are the handy indexing tabs on the cover so you can quickly find the listings you're looking for. The Directory has new easier-to-read listings because the pocket-sized edition is actually one-half inch bigger."

**

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Hamvention repeater, W8BI, serving Dayton Ohio

(5 sec pause here)

**

HAMVENTION 2008: THE DOCTOR IS IN

A new area within the ARRL EXPO this year is the interactive "Doctor Is IN" booth. Its baed on the QST column of the same name and everyone always wants to know who is behind the costume. This year attendees with have a chance to stop by the booth, ask question and have some one-on-one time with ARRL's Technical Experts. You might even be able to submit a stumper and get it published in QST.

This year's Docs On Call will be QST Contributing Editor Ward Silver, N0AX; QEX Editor Larry Wolfgang, WR1B; ARRL Senior Technical Editor Joel Hallas, W1ZR; QST Editor Steve Ford, WB8IMY, and ARRL RF Engineer Mike Gruber, W1MG.

**

HAMVENTION 2008: SOMETHING OR THE YOUNG

Hams in their early years are not being left out. Again, Hamvention Assistant General Chairman Michael Kalter, W8CI:

--

Kalter: "The Dayton Amateur Radio Association along with the ARRL is sponsoring a dinner for youth that will be held at the Dayton Amateur Radio Association clubhouse which is a very nice place to come and visit. That will be occurring on Saturday evening.

"On Friday evening we will be holding a general 'open house' to the general public from 6 to 9 PM. Its not to far from the Hara Arena and will be another exciting thing occurring this year."

--

Kalter says that he hopes as many folks as possible attend these two events. (ARNewsline(tm))

**

HAMVENTION 2008: THE ARRL MOVIE ROOM

Back at the Hara Arena, the ARRL will also sponsor a new Movie Room. This, as a new feature of this year's ARRL EXPO. Planned so far is a presentation on "60 Years of the Worked All Europe Contest." It will be presented by DJ3HW, and DL7RBI, of the Deutscher Amateur Radio Club. That's the German equivalent of ARRL.

The movie room will also screen a variety of DXpedition videos. The highlight will be with Bob Allphin, K4UEE. He will host an interactive session along with the showing of the video of the Peter One DXpedition to the Antarctic. (ARRL)

**

HAMVENTION 2008: ICOM PRESENTS D-STAR THE MOVIE

And speaking about video presentations, word of a new A new D-STAR promotional video is available on the ICOM Global website just in time for Hambvention 2008. There are two versions of the video are availabe to download. One is targeted at Europe, with the the other aimed at North America and the rest of the world. The video provides an introduction to D-STAR and explains the features available. Look for it at the Icom booth. If you cant make it to this years Hamvention you can download one or both at from http://www.icom.co.jp/world/products/video/d-starmovie/ (Icom)

**

HAMVENTION 2008: HEIL SOUND INTRODUCES TWO NEW MICS

Bob Heil, K9EID and Chip Margelli, K7JA, of Heil Sound, Ltd. are here. They and the bunch at the Heil Sound booth will be introducing the new microphones at this years Dayton Hamvention. First up is the PR 35 which features a large 1.5" diameter diaphragm in a dynamic microphone that outperforms condenser microphones.

The PR 35 was actually a product that songstress Joan Baez asked Bob Heil to build for her. This, after hearing the large diaphragm PR 30. It has a two stage bass roll off switch that allows you to tailor the low end response right at the microphone. The large element is in a very special internal shock mount and comes in an aluminum travel case.

Also being released at Dayton is the PR 781. Its based on the PR 780 that was designed for the Icom 7800 introduction project, the PR 781 is not rig specific. With the right accessories, it works well into any transmitter from a 1956 Harvey Wells to a brand new transceiver like the Yaesu FT 9000, Kenwood TS-2000 or what have you.

The new PR 35 and PR 781, along with the rest of the Heil microphone line will be on display in Audio Alley. To find it consult the Hamvention Program guide or simply follow the Hamvention crowds. More on whats new in ham radio products at Dayton in next weeks Amateur Radio Newsline report. (Heil Sound)

**

HAMVENTION 2008: SOFTWARE DEFINED RADIO FORUM

Turning to this years forums, one we think will receive a lot of attention is on the phenomenal paradigm shift toward Software Defined Radio. One that continues with a significant number of "off the shelf' as well as amateur radio designed hardware offerings.

What's interesting is that its computer programmers are fueling this fire and at the Software Defined Radio Forum attendees will get to hear some of the leaders in this movement describe the vast potential of this rapidly advancing technology.

This forum will also give an overview of some Software Defined Radio projects and show those attending how to get started. Topics will include Basic Software Defined Radio architecture, S-D-R Software and Software Defined Radio computer hardware requirements

Moderated by Eric Ellison, AA4SW, the Software Defined Radio Forum is on Saturday May 17th at 9 a.m. in Meeting Room 1 (Hamvention�)

**

HAMVENTION 2008: NFCC WILL UPDATE FREQUENCY MANAGEMENT

If you are a repeater owner or even a concerned user, you won't want to miss the he National Frequency Coordinators' Council open meeting slated for Friday at 9:15 in meeting room 5. The NFCC as its better known was founded a decade ago as the outcome of a meeting between repeater coordinators, the FCC and the ARRL. It has as its members the majority of frequency coordination bodies in the United States. Moderated by NFCC

Chairman Jay Maynard, K5ZC, this forum will update those interested in frequency coordination on the current status of the organization and spectrum management activities in the Amateur Radio service. (NFCC)

**

HAMVENTION 2008 - NEWSLINE BRINGS A TRIP BACK IN TIME

Amateur Radio Newsline will once again host this years Hamvention Town Meeting on Saturday, the 17th. This year with a look back in time.

As ham radio flings itself headlong into the so-called "digital revolution of the 21st century we will pause for a moment to take a look at the hobby over the past half-century to see where it was in the latter 1950's through the mid 1990's.

Our keynote speaker will be Dave Bell, W6AQ, who will host a screening of his 1969 award-winning 28 minute film "The Hams Wide World." This will be the first public showing of the movie in over a quarter of a century and something nobody will want to miss.

As to the rest of the session, its based on the generally accepted fact that most of the change that lead ham radio to the hobby we know today began in the 1960's and continued through to the end of the 20th century. The speakers you will hear all were "kid hams" or "teen hams" in the 1950's. Most got licensed in that era and lived though tubes giving way to solid state; SSB coming into its own H-F; F-M and repeaters on 2 meters replacing point to point A-M on 6 meters and early home-built computers replacing mechanical RTTY systems.

They and many of you were also observers as the long traditional equipment names like Hallicrafters, Hammerlund, Heathkit, and even Collins Radio peaked and then gave ground to newcomers from across the Pacific. Those bearing company names Inoue Communications, Trio and Yaesu. Companies now known a Icom, Kenwood and Yaesu.

In this session you will find out what it was like to study for and take your exam when it was still given at a local FCC field office. What it was like to assemble your first station and in some cases building some or all of it. And you will get a trip down memory lane to when kits were king and find out how being a kid ham back then affected our panel's lives and careers.

We sincerely hope that you will enjoy this trip back through time brought to you by the 2008 Dayton Hamvention and the Amateur Radio Newsline in Meeting Room 3 beginning at 11:30 a,m. We hope to see many of you here.

A full report on Hamvention 2008, in next weeks Amateur Radio Newsline rreport. (ARNewsline(tm))

**

EMERGING TECHNOLOGY: HAMSPHERE - THE VIRTUAL TRANSCEIVER

Something new on the World Wide Web of interest to ham radio is HamSphere. If you haven't of HamSphere it is best described as an artificial shortwave radio based on the natural laws of radio propagation. One that lets members talk around the world with both ham operators and unlicensed users using a virtual transceiver. You can find about this project on line at www.hamsphere.com. (Southgate)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

CHANGING OF THE GUARD: ASTRONAUT / HAM RON PARISE, WA4SIR - S.K.

Some things are not easy and this is one of those times. I'm Bill Pasternak, WA6ITF, with the sad news that Astronaut and ham radio operator Ron Parise, WA4SIR, passed away on Friday May 9th. This, following a long battle with cancer.

Ron Parise flew as a payload specialist on two Space Shuttle missions. He first went on-orbit in December 1990 on STS-35 on the Space Shuttle Columbia. He next flew on STS-67 on the Space Shuttle Endeavour in March 1995. These two missions, called ASTRO-1 and ASTRO-2 respectively, carried out Ultraviolet and X-ray astronomy observations. And during those flights, WA4SIR logged over 614 hours and 10.6 million miles in space.

According to ARISS International Chairman Frank Bauer, KA3HDO, Ron Parise was got his license at age 11, From that point on he kept the amateur radio at the forefront of everything he did. This included his operations from space.

During his two Space Shuttle flights WA4SIR talked to hundreds of hams on the ground, giving new meaning to the phrase the "ultimate DX-pedition". He was also instrumental in guiding the development of a simple ham radio system that could be used in multiple configurations on board the Space Shuttle.

This reporter first got to know Ron Parise back in 1989 when with the late Roy Neal, K6DUE, we produced two video's that WA4SIR appeared in. These were "SAREX 90" and later "Ham Radio In Space." What nicer tribute can I give him but to say he was a joy to work with and a truly nice person to know.

In an effort to continue Ron's tireless work to inspire the next generation, the Parise family has set up a scholarship fund in Ron's honor.
The scholarship is for students pursuing technical degrees at Youngtown State University, where Ron received his Bachelors of Science degree. In lieu of flowers, those interested are welcome to send donations to the Dr. Ronald A. Parise Scholarship Fund, Youngstown State University, One University Plaza, Youngstown, Ohio 44555. (KA3HDO, N6BIS)

**

EMERGING TECHNOLOGY: ORGANIC BASED CARBON MOLICULES

University of Pittsburgh scientists have discovered that certain organic molecules exhibit the properties of atoms under certain circumstances and, in turn, conduct electricity as well as metal.

The research group found that the hollow, soccer-ball-shaped carbon molecules known as fullerenes can hold and transfer an electrical charge much like the most highly conductive atoms. When an electron was introduced into a fullerene molecule, the shape of the electron distribution mimicked that of a hydrogen atom or an atom from the alkali metal group, which includes lithium, sodium, and potassium. Moreover, when two fullerenes were placed next to each other on a copper surface, they showed the electron distribution of their chemical bond and appeared as H_2, a hydrogen molecule. The assembly exhibited metal-like conductivity when the team extended it to a wire 1-molecule-wide.

Detailed in the April 18th edition of the magazine Science, the finding is a breakthrough in developing nano-technology. One that provides a new method for designing electronic materials, including inexpensive and multifunctional organic conductors that have long been considered the key to smaller, cheaper, and faster technologies. (Science OnLine)

**

EMERGING TECHNOLOGY: UPDATE ON HD RADIO ROLLOUT

The number of big-market stations turning on High Definition Radio in the past year fell off, while the number of stations in markets 51 to 100 held more steady.

According to an analysis from BIA Financial Network prepared for the Radio World HD Radio Scoreboard, 26 stations in the top 10 markets added HD Radio through mid-December 2007. This, compared to 76 the year before and 117 the year before that.

By contrast, there were 118 stations in markets 51 to 100 turning on HD Radio last year. That, compared to 124 the prior year and 111 in 2006.

One likely reason for the disparity is that proponents of HD Radio started with the bigger markets when they launched their rollout, though by no means are all big-market stations now converted. (RW)

**

ON THE AIR: THE PORTUGAL LIGHTHOUSE ACTIVITY

Members of the Portugal's Algarve DX Group will activate 7 lighthouses simultaneously between May 31st and June 1st. Operations will take place on 40, 30, 20 and 17 meters. There may be some operations on 80 and 15 meters and plans seem definate to include at least one 6 meter operational from the lighthouse at Santa Maria. The modes used will be CW, SSB and RTTY. A free award will be issued to any who contacts all 7 special lighthouse callsigns during activity operations. QSL via CT1GFK, by the Bureau or direct. (Southgate)

**

ON THE AIR: HONG KONG CLUB GETS OLYMPIC CALL

Members of the Hong Kong Amateur Radio DX Association have received official permission from the Office Of The Telecommunications Authority authorizing them to use the special event callsign VR2008O for the period between July 15th and August 31st. This, to celebrate the 2008 Beijing Olympics.

Operations will be primarily on 40 through 10 meters and VHF on 6 meters. The modes used will mainly be SSB, RTTY and P-S-K 31. QSL direct only to VR2XMT: Charlie Ho, PO Box 900, Fanling Post Office, Hong Kong.

There will be no e-QSL or Logbook to the Word electronic cards accepted. Preliminary information and QSL card design have been put on line at www.qrz.com/vr2008o (HKARDXA)

**

ON THE AIR: JARL YOSAKOI KOCHI EVENT

The Japan Amateur Radio League, Inc. will be holding their 50th annual Yosakoi Kochi meeting on May 25th. Look for special event station 8-J-50-J-A-R-L to be active now through May 25th to celebrate this gathering . Activity will be on all bands from 160 meters through 1200 MHz, using CW, SSB, FM and AM. QSL via the JARL QSL Bureau. (OPDX)

**

DX

In Dayton Related D-X news, word that the ARRL's DXCC staff and some additional volunteers will be checking cards at the 2008 Dayton Hamvention
�
during all hours of operation on Friday, Saturday and Sunday. ARRL DXCC Manager Bill Moore, NC1L, said, "Many hams travel from all over the world to attend Hamvention, so card checkers are especially busy." Card checkers

will be checking cards for DXCC, Worked All States, the VHF/UHF Century Club and Worked All Continents awards.

In other DX news, word that K9ZO and his XYL will be on holiday from Bermuda during July. He expects to be active as K9ZO portable VP9 and also plans to operate the IARU Contest. He will also monitor 30, 17, 12 and 6 meters. QSL as directed on the air.

Further up in frequency the W3HZU Beacons located in Grid FM-19 on 2.4GHZ and 1.2GHZ have been temporarily taken off the air. This, in preparation to add a third beacon on 5.76GHZ. A message on the amsat-bb will advise when the beacons are back onin operation.

Last but by no means least, 5Z4DX, will be active from Shanzu Beach thnrough June 11th. Activity will be on all bands and modes. He also plans to possibly activate Wasini Island from May 25th to the 26th and Lamu Island folowing that. QSL direct to Frank Steffen Gast, Eskifirdi, 735 Eskifjoedur, Iceland.

Above from various DX News Sorces

HAMVENTION 2008: W5KUB TO PROVIDE LIVE STREAMING VIDEO MAY 14 - 18

And finally this week, if you can't make it to this years Dayton Hamvention, Tom Medlin, W5KUB, has the next best thing. From May 15th to the 18th Tom will being many of this years Hamvention highlights right to your home computer screen via broadband video streaming.

Web transmissions from the Hamvention were slated to begin on Thursday May 15th at Fleamarket spaces 3350 and 3351. Once the show opens on Friday, Tom plans nonstop coverage until closing on Sunday afternoon. Then he invites you to vicariously drive back to his home in Memphis with him. This, as he passes through some of the prettiest countryside that this nation has to offer.

So if you can't be there in person, take your web browser to http://w5kub.com and let Tom Medlin bring the magic of Hamvention 2008 directly to your home computer screen

Again, the U-R-L is http://W5KUB.com. There is also a direct link to Tom's streaming video site from the Dayton Hamvention website at www.hamvention.org. (W5KUB)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the

Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

A reminder that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year Award ends at midnight on May 30th. Nominations postmarked after that time or received electronically after that time will not be considered. A nominating form as a dot p-d-f file is available at our special Young Ham of the Year website at www dot yhoty dot org. Download it, fill it out and send it to us by U-S mail or electronically.

With special thanks to Hap Holly, KC9RP, for the audio with Michael Kaltee, W8CI and with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

My thought is this.. would you want an 1 watt transmitter to be used
to save the lives of your loved ones when you know there could be 1500
watts of power in a nearby radio on the same frequency?

I think the FCC could allocate a frequency off the ham band, possibly
in the commercial market that will suffice, especially where not more
than a few watts are allowed. Such as the GMRS/FRS band?

The State of Oregon is putting out six figures to provide for a D-Star EMCOMM network and a Pactor network. It's being pushed by several folks who got either ICOM or the State or both to subsidize their personal D-Star radios and/or are "blessed with resources" to get one on their own. Not counting my HF rig, I have five radios for voice comms: a VHF and a UHF in the home comm room, my mobile, my HT, and my "grab-and-go". Who is going to subsidize that? I surely can't.

Pactor is fine - my setup works at minimal cost- as long as it's Pactor I. The cost of the proprietary modem for Pactor II and III is in the high three figures if not four by now with the falling dollar.

My perennial "what hath technology wrought" rant....

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group every month. You are now reading the first article, which explains what rec.radio.info is, and answers some Frequently Asked Questions. The second article is titled Posting Guidelines, and you only need to read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:
 - What is the purpose of rec.radio.info?

- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit chat about radio. Rec.radio.info will contain informational, factual articles only. Follow-ups are redirected to an appropriate other group, and further discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

```
/Newsgroups:.*[ ,]rec\.radio\.info/h:j
```

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

```
rec.radio.info:!s/:^
```

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

```
sequence
rec.radio.info
rec.radio.
```

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

In slrn, according to the srln FAQ, the following scoring rule will |
allow you to see rec.radio.info-crossposted bulletins, while still |
filtering out most SPAM or "Velveeta" crossposted to more than 2 |
newsgroups (as such articles usually do not contain a 'Followup-To:' |
header): |

```
Score: -9999                                                                 |
        Newsgroups: ,.*,                                                     |
        ~Followup-To: .                                                      |
```

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under

certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article
to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark
Salyzyn, AG4YD, ex-VE6MGS.)

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group and to rec.answers/news.answers every month. You are now reading the second article, which explains how to submit something to rec.radio.info, and which answers some Frequently Asked Questions about the submission process. The first article is titled "Welcome to rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post the article to rec.radio.info, as you would do with any other newsgroup. The difference is that the software recognizes the special status of rec.radio.info as a moderated group, and will e-mail your article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the transparency offered by the newsreading software is probably more convenient.

If you have any questions, or wish to deal with some administrivia with the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have to read it first, give it the stamp of approval, and finally send it on to the group. We will attempt to read and decide on all submissions within 72 hours at the very least, though we will probably be able to process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may

allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc	Amateur (ham) radio and related matters
rec.radio.amateur.packet	Amateur Packet Radio discussions
rec.radio.amateur.policy	Amateur Radio practices, rules, etc.
rec.radio.noncomm	Non commercial radio discussions
rec.radio.shortwave	International broadcasting on the 'HF' bands
rec.radio.cb	Citizens Band (27 MHz) discussion
rec.radio.scanner	Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

```
 Message-ID: <$opa.55.1994@ampr.org>                                      |
```

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

> My perennial "what hath technology wrought" rant....

My misgivings in this area are related more to the complexity of the
technology, although the cost is certainly a consideration.

My experience in real disaster situations suggests that simple is better
and that much of the reason to have amateur radio participation is tied
to the simplicity of the gear that we use. The reason we're there in
the first place is that the commercial infrastructure isn't functioning.
  Tying our operations to high-tech equipment puts us in the same realm
as what we're there to replace.

My experience also suggests that it's more the human factor than the
equipment factor that makes us valuable in a disaster operation. The
training and experience that the human has is much more important than
what kind of equipment is in use.

I suppose that the response to this is that the best of all worlds is a
trained cadre of operators using the best state-of-the-art equipment
available. In theory this is correct, but in the real world of an
actual disaster operation things might be a lot different.

Indeed, it went well, except as you say for the ticket issues. I
talked with a DARA official at a banquet, and they are VERY aware of
what happened, and that it must NEVER happen again.

At a banquet, he related that in 2000 DARA had $70 in the bank, and
$190k in debts. This year, they gave the non-profit organization $5k
as thanks for support of the Hamvention, for development work. Talk
about a turn around!

APRS texting isn't terribly convenient, and you have to put up with the rest of the squacking to get it.

A two-second burst of 1200 baud packet, even assuming a 500 ms
> TXDELAY, has more text than a standard SMS. That's more than 50 seconds at
> PSK31.

I'm not talking about sending data, or long messages, just ones similar
to what is sent in cell phone text messages.

This is about getting people interested and using Ham radio. It isn't
necessarily about getting something that you or even I would buy.
Younger folks, high school kids, would likely buy into something like that.

>Who's going to install the PSK31 digipeaters?

What I envision would be likely simplex. Although a repeater could come
into the picture somewhere, it wouldn't need to be a digipeater.

> Who is going to develop
> the technology to determine that a PSK31 signal that is 100Hz off the correct

> QSO.)

These are all pretty minor technical problems. I imagine that a person
might be able to differentiate between signals in an old school manner,
by tuning them in.

>> Oh yeah, while we're at it, I don't know if that HT with the camera is
>> still being produced
>
> Ever try sending an image at 1200 baud?

I've sent SSTV images in a fairly short time. They aren't large images,
but along with the texting I speak of, make a fun little gadget for
people to play with. Might even be of some emergency use.

I have to say that I probably would never buy such a device. That
doesn't make it a dumb idea though. If there was one thing I would like
to counsel Hams on , it is the idea that whatever you or I are into at
the moment is not what everyone is into, and it shouldn't be either.
Some modes such as IRLP or Echolink, I don't even consider "radio", but
hey, a lot of people like them a lot, so I won't argue.

>> As much as I prefer regular transceivers, SDR radio would be a pretty

> But you're the guy who wants texting via PSK31? D-STAR texting, bad. PSK31
> texting, good?

I don't declare D-Star Texting "bad", but I do declare the PSK31 texting pretty darn good. PSK31 has a huge advantage in that it is pretty cheap, and not proprietary. D-Star is decidedly not cheap, and is quite proprietary. Wanna use D-Star? Get out the plastic and go without something else for a couple years.

>> D-Star might need a big kick start, such as emergency groups purchasing

> D-STAR radio, makes it certain that D-STAR is a non-starter here.

I think that what would be needed is for local governments to do the actual purchasing, then hand it over to the Hams. The Hams are going to have to have regular access to the D-Star repeater, or else they won't buy-in.

My honest opinion however is that this is one of those technology solutions that just add too much technology to the mix. One of the big complaints from emergency responders is that they can't talk to each other. This is due to the introduction of too much structure upon the system. With D Star, we do the same thing with Hams.

>> people who want to put up a digital repeater (note, not a digipeater)
>> might be going to a lot of expense to talk to one or two friends.
>
> I thought I'd like to buy an ID-1 when it came out. At $3000 (one for me,
> one for someone to talk to) I said "no thanks".

Yup. And the big problem as far as Amateurs go is that they can't get into the system. Whereas you or I can build a CW, SSB, FM, or PSK31 radio for most any application we'd like, we can't do that with D-Star. So unless those prices come waaaay down, D-Star is going to be a very low volume mode, probably used only by emergency groups. Of course if that is the case, they shouldn't be operating it on the Amateur bands, because they can get more use out of it on their own frequencies, which won't have Amateur reestrictions.

I know of a number of members of ARES and clubs wanting to be setup with all kinds of high-tech communications in case of emergency. I have also noticed that in most cases, while they receive lots of verbal support and volunteers, they end up in the exercises with a severe shortage of operators.

I volunteered in the aftermath of Hurricanes Hugo and Frances and many very localized disasters. Locals aren't available in the aftermath of area-wide disasters and in local emergencies, often comm needs require multiple repeaters or very many HT communications.

In the early days of Amateur Radio, "High Tech" meant communicating without wires and homing pigeons. The important thing is timely and accurate communications. today's "High-tech" can help, but the important thing is " any means necessary".

> My perennial "what hath technology wrought" rant....

Unfortunately, it's how they think. One of my old chestnuts is that the reason that Ham radio is often the only thing working when the wheels fall off is that:

1.Our organization is ad-hoc. Lots of people who know how to communicate, but are not within some strict hierarchy.

2.We have equipment that will talk to our equipment. Now sometimes that means that we're using old school SSB or FM or CW. That's bad? No that's good! The idea is to pass the message, not to sit in the seat and feel really great about the whiz-bang technology we're using.

3.We know how to get the messages across. There is something to be said about understanding propagation. Going to send a message on 20 meters to someone 100 miles away? 40 meters at night? How about 50 miles away on 440 simplex? A little bit of knowledge is pretty handy.

Now what I see is the folk who would have us help when disaster strikes have noted that we seem to pull rabbits out of our hat, and they like what they see. But as people who impress a hierarchy, organization, and levels of technology on everything they touch, now want to do the same to us. After Katrina, I was kind of shocked by all the "This is what you Amateurs Have To Do" articles and speeches. And each article had a common thread - we amateurs had to become more like the people who experienced failure. Just didn't make sense.

And yet they can't seem to figure out why their systems fail when it all falls apart. My guess is that we will be looking at more technology impressed on the system. And it will probably fail too.

I'm glad things are working. I suspect that the turnaround required two things -- good management and an actual market for what they're selling.
  Maybe what we're going to see is less hamfests but bigger ones. A new hamfest comes to Rochester MN this summer (http://www.rarexpo.org/) so it will be instructive to see how they do.

In the end, I decided to go, and had a blast as usual. sold a couple items, my SB200 linear, and my trusty old IC-745. (gosh, I miss it already, my first HF rig)

With the proceeds and a little extra, I bought a Kenwood TS480SAT, which I'll put in the Vitara as soon as I get over this nasty cold.

On another note, I really think that it is time that DARA start looking at another venue for the Hamfest. Yes, there is a lot to be said for tradition, but in the 6 or so years I've been going, the Hara arena has deteriorated quite a bit. It wasn't in that great of shape when I first went either. Rusty exit doors, missing floor tiles. The parking lot is getting awfully pitted, and my guess is that it isn't ever going to be repaved. It's kind of sad, but these sort of things happen. I think the place is heading downward, and it's just a matter of time before they close. At that point DARA will have to find a new venue.

>The State of Oregon is putting out six figures to provide for a D-Star
>EMCOMM network and a Pactor network.

No, they are not. The ICOM radios can have the D-Star option added at local expense. Neither the 2820 nor the 2200 have D-Star built in. There certainly is no D-Star repeater support.

>Pactor is fine - my setup works at minimal cost- as long as it's
>Pactor I. The cost of the proprietary modem for Pactor II and III is
>in the high three figures if not four by now with the falling dollar.

The pactor is intended primarilly for county to state communication, not user to user.

>> My God, why? APRS has a texting mode. The technology is in place and
>> well-defined.
>
>APRS texting isn't terribly convenient,

That's a user-interface issue, not a technology issue. I could write software tomorrow that hooks my D700 up and sends APRS text as easily as email, if someone hasn't already. I've seen aftermarket keyboards for the D700 to do this.

>and you have to put up with the rest of the squacking to get it.

I have no idea what you mean by this. You aren't going to listen to the PSK31 audio any more than you have to listen to the APRS audio when using it.

>> A two-second burst of 1200 baud packet, even assuming a 500 ms
>> TXDELAY, has more text than a standard SMS. That's more than 50 seconds at
>> PSK31.
>
>I'm not talking about sending data, or long messages, just ones similar
>to what is sent in cell phone text messages.

"Cell phone text messages" are "data". Two seconds of 1200 baud packet can send more "cell phone text" than more than 50 seconds of PSK31. If people had to wait a minute for their SMS text messages to be sent instead of the few seconds it does, they'd be less likely to use it.

>This is about getting people interested and using Ham radio.

We HAVE the technology in place that is better than that proposed as the salvation of amateur radio. No, a PSK31 HT isn't going to do anything to support the hobby or bring new people in that APRS HTs haven't already done. A PSK31 HT is an interesting concept; difficult product.

>It isn't
>necessarily about getting something that you or even I would buy.

If nobody buys it, then it won't ever be cheap. If WE, the existing amateur base doesn't support it, it ain't gonna happen. Voice HTs work because there is an existing repeater infrastructure. APRS HTs work only because there is an existing APRS network infrastructure. If there is no VHF PSK31 infrastructure, it isn't going to be used.

>Younger folks, high school kids, would likely buy into something like that.

No "younger folks" are going to buy a new technology where there is no
infrastructure to support them.

>>Who's going to install the PSK31 digipeaters?
>
>What I envision would be likely simplex.

The range of a PSK31 HT would be very short. FRS distances, at best. It
would be extremely sensitive to antenna orientation. You couldn't load
a message and then put the HT back on your belt while it takes a minute
to send. Who is going to pay several hundred dollars for an HT that can
only communicate three blocks in a city?

>Although a repeater could come
>into the picture somewhere, it wouldn't need to be a digipeater.

PSK31 is a DIGITAL mode. Repeaters for digital data are ofen called
digipeaters. WHO is going to install these repeaters? You can't use
the existing ones -- PSK31 is narrowband FSK, existing repeaters are
relatively wideband FM. If you are going to use an entire FM voice channel
bandwidth, you might as well use standard 1200 baud packet and APRS.
Existing technology. Where are all the youngsters using APRS messaging?
Why do you believe they would flock to a slower, shorter range system?

>   These are all pretty minor technical problems. I imagine that a person
>might be able to differentiate between signals in an old school manner,
>by tuning them in.

A PERSON might be able to, but a DIGIPEATER is not a person. And these
YOUNG PEOPLE you want to lure into the hobby with a PSK31 HT aren't going
to want to have to tune around hoping to be on the right frequency when
their friends send them messages. It's got to be channelized to make
it simple. An HT that's off channel by as little as 100Hz for PSK31 is
a different channel. That's REALLY tight technical standards for amateur
gear.

>> Ever try sending an image at 1200 baud?
>
>I've sent SSTV images in a fairly short time. They aren't large images,

They are also not PSK31 data. Entirely different mode.

>I have to say that I probably would never buy such a device. That
>doesn't make it a dumb idea though.

No, the technical issues do, and expecting it to bring lots of new people
into the hobby as something similar to SMS text messaging is silly. We have
better technology already in our hands; where are the people?

>> But you're the guy who wants texting via PSK31? D-STAR texting, bad. PSK31
>> texting, good?
>
>   I don't declare D-Star Texting "bad", but I do declare the PSK31

>texting pretty darn good.

In it's place, perhaps. Sitting in a radio shack with a $1000 HF radio
and a computer to decode it, yes. In an HT, no.

>PSK31 has a huge advantage in that it is
>pretty cheap, and not proprietary. D-Star is decidedly not cheap, and is
> quite proprietary.

No, D-Star is not proprietary. It is an open standard.

>Wanna use D-Star? Get out the plastic and go
>without something else for a couple years.

Yes. Want a usable PSK31 HT? Go without something else for many years.

>I think that what would be needed is for local governments to do the
>actual purchasing, then hand it over to the Hams.

Wow.

>The Hams are going to
>have to have regular access to the D-Star repeater, or else they won't
>buy-in.

The hams are going to have to have a lot of MONEY to have regular access
to any D-Star repeater.

>My honest opinion however is that this is one of those technology
>solutions that just add too much technology to the mix. One of the big
>complaints from emergency responders is that they can't talk to each
>other. This is due to the introduction of too much structure upon the
>system.

This is due to licensing limitations that prevent LMR radios from being
fully and easily programmable in the field.

>With D Star, we do the same thing with Hams.

I know of no D-Star radio which is not fully field programmable.

>> I thought I'd like to buy an ID-1 when it came out. At $3000 (one for me,
>> one for someone to talk to) I said "no thanks".
>
>Yup. And the big problem as far as Amateurs go is that they can't get
>into the system.

I have no idea what you mean by this. What "system" can they not get into?

>Whereas you or I can build a CW, SSB, FM, or PSK31
>radio for most any application we'd like, we can't do that with D-Star.

So what? Most people cannot build even a CW transmitter, much less a PSK31 system. Have YOU built your own PC to run the PSK31 software yet? I doubt it.

>So unless those prices come waaaay down, D-Star is going to be a very
>low volume mode, probably used only by emergency groups. Of course if
>that is the case, they shouldn't be operating it on the Amateur bands,
>because they can get more use out of it on their own frequencies,

I'm sorry. Exactly what frequencies do ARES groups have that aren't part of the Amateur Radio Service? How do I legally put an amateur certificated repeater on to a public-service frequency?

>which won't have Amateur reestrictions.

Amateur restrictions are trivial compared to LMR. Nobody is demanding that we all cut our bandwidth and channel spacings in half by 2013, e.g.. Our licenses don't come with a list of specific frequencies we can use.

Well, I have a few more years than you; and yes, Hara is getting
old, as we all are....

But there's nowhere anywhere nearby with the indoor+outdoor space
the Hamvention uses. If/when the Wampler family [ISTM that's their
name..] sells out to developers, the Hamvention may well be history...

Amateur Radio Newsline" Report 1606 - May 23, 2008

Amateur Radio Newsline report number 1606 with a release date of Friday, May 23rd, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The Red Cross says lifestyle checks will no longer be required of ARES volunteers, hams in China continue their post earthquake lifesaving communications, Hollingsworth says he will retire this summer and Dayton 2008 is a fun success. Find out the details on Amateur Radio Newsline" report number 1606 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: THE RED CROSS SAYS NO MORE LIFESTYLE CHECKS ON HAM VOLUNTEERS

In a surprise move, the American Red Cross has acquiesced to the demands of the ham radio community and will no longer perform so-called lifestyle background checks on hams who want to provide communications to the relief agency. Khrystyne Keane, K1SFA, of the ARRL Letter says that the announcement came at a most apropos time and place:

--

Keane: "We had a big announcement yesterday in the ARES forum. The Red Cross has announced that it will no longer conduct as part of its background checks, mode of living checks or credit checks. And now, all that remains to be done is for the ARRL and the Red Cross to hammer out an MOU and get this thing going.

--

The MOU that K1SFA reefers to is the Memorandum of Understanding between the League and the Red Cross. A fancy term that really means an agreement where-in the ARRL and the American Red Cross agree to work together in those situations where volunteer ham radio communications are needed.

Such an agreement was in place for many years but the League was hesitant to renew it after members complained about background checks initiated back in 2006. Nobody minded criminal background checks but a lot of folks objected to the extent the Red Cross was going to. Its background checks included, among other things, a credit check and a mode of living check for its staff and volunteers. This included ARES volunteers providing services to the Red Cross during times of disasters.

The ARRL and a lot of hams not associated with the League considered the extent of the Red Cross background check as unneeded and inappropriate for communications volunteers. So in November 2007, ARRL President Joel Harrison, W5ZN, wrote to the American Red Cross regarding concerns voiced by the nations ham radio community.

But until a few weeks ago the American Red Cross was hanging tough and refusing to use hams who refused to permit the full background check program. That all changed on May 8th when Armond Mascelli, who is American Red Cross Vice President for Disaster Response Services finally replied to W5ZN with word that his organization had reconsidered its position. Mascelli's letter stated that the portion of the background checks that the ARRL and seemingly all of ham radio objected to had been eliminated. At least eliminated for communications volunteers involved through the ARRL-sponsored ARES program.

According to Mascelli, a new background consent form will be used by all Red Cross chapters for ARRL members and other partner organizations. The form and related process is limited to the name and social security number verification of the individual, and a criminal background check. References and suggestions to other related investigative possibilities have been stricken from the form. (ARRL, ARNewsline")

RESCUE RADIO: 40 AND 20 METERS BEING USED IN CHINA QUAKE RESCUE

According to news reports, China is in mourning for the estimated 50,000 people killed in the earthquake on May 12th and radio amateurs in that nation are still asking that three frequencies be kept clear for emergency rescue and relief operations

According to the Chinese Radio Sports Association 7.050 and 7.060 and 14.270 MHz. have been designated for use only by hams involved in emergency services and post quake in the rescue. Michael Chen, BD5RV, reports that a group of radio amateurs is transmitting on 14.270 MHz from Wenchuan. That's not far from the epicenter of quake. During one contact with BY8AA in Chengdu, messages were sent asking for raincoats, water, tents, and outdoor living facilities. BY8AA has also been helping many others with communication and during one week had an operational log in excess of 300 pages.

Meantime the Chinese Radio Sports Association has reported that long distance telephone services have been congested in the Chengdu area. This, presumably due to a heavy demand and damage.

Because of this it was asked to set up and man a High Frequency station in Chengdu. That station is currently on the air using the call BT8RC and is the dedicated channel for the Chinese Red Cross Foundation in Beijing to Chengdu providing communications to enable the relief agency to more effectively carry out its work.

Other cities in the earthquake area have setup or restored VHF and UHF repeaters and amateur radio communication teams to assist with communication.

The quake hit at about 06:30 UTC on Monday, May 12th. It registered at a magnitude 7.8 earthquake and was centered near Sichuan. In addition to those known to have perished, more than 245,000 were injured and at least 2 million are homeless.

Again the Chinese Radio Sports Association continues to request that hams world wide stay clear of 7.050, 7.060 and 14.270 MHz so that they can be used for emergency communications that can and will save lives. (CQ, QRZ.com, Southgate, others)

**

RESCUE RADIO: NO HAM RADIO IN MYANMAR TYPHOON

Meantime in Myanmar where tens of thousands of people were killed by a recent typhoon, CQ Public Service Editor Bob Josuweit, WA3PZO, passes on a report from G4HPE of the International Radio Emergency Support Coalition that there currently is no amateur radio relief activity taking place there. The UN has finally been permitted to set up both HF and VHF communications based in the capital city of Yangon. This is for use by the entire humanitarian community, but none of the frequencies in use are in the Amateur bands. (CQ)

**

RADIO LAW: FCC SAYS NO TO DIGITAL OPERATIONS PETITION

Back at home the FCC has dismissed a petition for rulemaking filed by Mark Miller, N5RFX, requesting amendment of the Commission's Amateur Radio Service rules. This, to revise the operating privileges for amateur radio service stations that transmit data emission types.

Specifically, the Petition requested that several Sections of the Amateur Service rules be amended to revise various definitions and frequency privileges. While Millers petition covered a number of issues regarding digital operations, the most controversial dealt with unattended digital operations on the High Frequency bands. And while Miller never named Winlink 2000 as the target of his petition, that's the way the FCC seemed to see it. And according to the FCC's Bill Cross, W3TN, speaking at last weeks Dayton Hamvention, there was an important reason for the denial of this portion of the Miller rules change request:

--

Cross: "Winlink as a communications system seems to have become the Brussels sprouts of ham radio: You either love it or you hate it. And trying to bury it under ketchup or hollandaise sauce hasn't changed the basic like or dislike for Winlink.

"Most of the controversy here seems to swirl around how certain licensees use it.

"Some use it for a radio e-mail system.

"Others use it for getting weather maps while they are on sailboats in places the brave dare not go.

"Others use it for their personal business activities, such as buying and selling stocks.

"These uses are really a Section 97.113, a 'prohibited communications' question, not a technology question. The rules apply to the Control Operator of the station transmitting the message, not the Winlink system.

"As we have said until we are blue in the face, in the Amateur Service we do not license or regulate systems. We license stations. And it is the station licensee that is responsible for the proper operation of the station.

"Its your callsign on the transmission. It is your responsibility."

--

In other words, whether a transmission is analog or digital really does not matter. What is important is that all hams obey the rules that the Commission has set out to guide the service. It also can be read as the FCC saying that it will not re-regulate a service that its worked very hard to free from burdensome regulations just to placate the needs, wants or claims of any one group of hams regarding another.

There more to be covered regarding the Miller petition and its being totally denied. Listen for it in future Amateur Radio Newsline reports. (ARNewsline - Dayton Hamvention FCC Forum)

THE YHOTY AWARD: NOMINATIONS CLOSE MAY 30

As of the release of this weeks newscast we have not received any valid nominations for this years Young Ham of the Year Award. Well, the nominating period for this years award ends at midnight on Friday May 30th. Due to the mechanics of preparing for the award presentation ceremony it is impossible to extend beyond that date. Any nomination received electronically after midnight May 30th or postmarked after midnight on May 30th will be deemed ineligible. And if no valid nominations are received by that cutoff date and time the award program for 2008 will be cancelled.

And when we say valid nomination we mean one for a youngster age 18 or younger who has made a major contribution in some way to the betterment of Amateur Radio. This can be through public service, technical development, contributions to the state of communications sciences, recruitment of new hams or whatever seems to be an accomplishment worth honoring.

What is not acceptable are nominations that say something like .. "my 7 year old just passed his tech test so give him a radio."

And if you think that we do not get our share of these, guess again. About one in three nomination form we have received over the years reads something like that because people do not read the rules and think that the Young Ham of the Year Award is some form of contest or prize drawing. Its neither. Its an award program now trying to enter its 22nd year and aimed specifically way honoring the accomplishments of the younger members of ham radio society. As recipient, the person selected is given a free trip to the Huntsville Hamfest in August along with a piece of Yaesu brand ham radio gear from corporate underwriter Vertex Standard Corporation. He or she also gets to spend a week at Spacecamp Huntsville courtesy of corporate underwriter CQ Magazine.

The Young Ham of the Year Award is open to any ham age 18 or younger living in the 50 United States, plus Puerto Rico and all Canadian Provinces. A full set of rules along with a downloadable nominating form is on line at www.yhoty.org Just slick on the tab marked 2008 nominations and follow the instructions that say "Download the nominating form as a PDF by clicking here. Then, fill it out, attach the required substantiating material and mail it to Amateur Radio Newsline - YHOTY, 28197 Robin Avenue, Santa Clarita, California, 91350. Again that address is Amateur Radio Newsline - YHOTY, 28197 Robin Avenue, Santa Clarita, California, 91350.

If for some reason you cannot retrieve the form from the website, e-mail us to newsline (at) arnewsline (dot)org. Include your return e-mail and we will return a form to you electronically.

Once again, the cutoff for nominations for the 2008 Amateur Radio Newsline Young Ham of the Year Award is midnight on Friday, May 30th 2008. If we do not receive any valid nominations by that date the award program for this year will be cancelled.

The bottom line is that whether a worthy young ham is honored this year, or not, is literally up to you. (ARNewsline / YHOTY)

**

HAMVENTION 2008: ITS ALL OVER FOR ANOTHER YEAR

The 2008 Dayton Hamvention is over, but its left a lot of good memories and thankfully only one that's was good one with some attendees. The ones who will remember the bad are those who arrived early to set up Flea Market spaces only to find that a computer glitch would have them waiting in line. In some cases for several hours. Ron Moorefield, W8ILC, has been associated with the Hamvention since the very beginning. He says that this will be one of the items taken under advisement when the committee holds its critique of Hamvention 2008 in a few weeks:

--

Moorefield: "Well, we will have our critique early next month and from there we are going to hold a meeting every month and get this going. The word is that we are going to get a lot of things going way ahead of time in October."

--

Moorefield says that moving things up a few months should insure enough time to cure problems early on so that they do not become last minute headaches.

The good news is that with this one exception it was a show that everyone seemed to really enjoy. This includes Ray Arndt, SM5LBR, who flew over from Sweden. Ray writes for several European amateur radio magazines. He says that those who showed up were ready to deal:

--

Arndt: "I've talked to a couple of dealers here and (other) people. They are all very satisfied and they all say the same thing. (That is) the people who came here really bought. The people who normally came here and do not buy, they stayed at home this time. So, obviously it was very positive."

--

Arndt did note that it was not a big year for the introduction of new high end gear. Definitely not like it was just a year ago:

--

Arndt: "You know: Last year was absolutely exciting. There were so many new things that I couldn't actually cover everything. Every large company had something new out. This year you really have got to look around to find a few new things.

"This in the middle. A sort of in-between year because they cannot bring out expensive new radios. There were some new things out here but it was a more normal year, I would say."

--

As to the size of the crowd? Some say it was about the same as last year. Others say it was definitely a smaller group and blamed the near $4 dollar a gallon for gasoline as the reason folks may have stayed away. Ron Moorefield tends to disagree:

--

Moorefield: "I think that the weather was perfect. This brought people out who were feeling possibly with rain, they would not come.

"The gas prices as they were, really surprised me. Yet I believe that if people really want to come to the Dayton Hamvention, that they will be here no matter what the economics are. We had a good weekend."

--

Moorefield may be correct. According to Ray Arndt, gas prices in the United states are still a bargain as compared to what radio amateurs shell out to drive to a hamfest in Europe:

--

Arndt: "We have now (in Europe) $7 to $8 a U.S. gallon. But that's a higher octane at 95.

"I recently saw an article in a newspaper in Sweden that Sweden is trying to go to the forefront of being environmental. It says that if we meet the constraints that Sweden has taken in the European Union, then in 2020 a gallon will be up at $20.

--

Bottom line, it's a lot more expensive to hit a hamfest there than it is here in the USA.

And no Dayton Hamvention would be complete without the views of a sales representative and DX'er who has attended a lot of them. Of coarse we are talking about Chip Margelli, K7JA, who now is with Heil Sound Limited. Chip says from behind the sales counter, this was truly a banner year:

--

Margelli" "Boy, what a great Dayton. The weather turned out to be much better than we expected it to be. It was moderately cool with partly cloudy skies.

"Business was brisk. We had our best year ever at Heil Sound. It was a very up-beat crowd this year. We didn't know what to expect with sunspots down but the crowd was very up-beat and interested in getting new technology into their ham stations.

"We just think it was a great weekend in Dayton, Ohio."

--

Lots more happened at Hamvention 2008 and we will continue our coverage next week. (ARNewsline")

**

NAMES IN THE NEWS: RILEY HOLLINGSWORTH TO RETIRE IN JULY

According to ARRL, Riley Hollingsworth, K4ZDH, who is Special Counsel in the FCC Spectrum Enforcement Division plans to retire on July 3rd. Hollingsworth reportedly told the ARRL that his to head out in July, assuming the results of the second round of the PAVE PAWS 440 repeater monitoring in California present no complications.

Hollingsworth is quoted as saying that it has been a privilege to work with and for the Amateur Radio licensees and the land mobile frequency coordinators. He says that he was extremely fortunate to work for two wonderful groups of people referring to those at FCC headquarters in the Enforcement Bureau, and for those holding licensees in amateur radio.

As previously reported, Hollingsworth had planned to retire earlier this year, but changed his mind. At that time he said that there were several issues on the table that he wanted to continue to work through with the amateur community.

A full report on Hollingsworth's pending retirement can be found on the ARRL news pages at www.arrl.org. (ARRL, Handi Hams, others)

**

NAMES IN THE NEWS: K5ZD NAMED DIRECTOR OF CQ WPX CONTESTS

Contesting luminary Randy Thompson, K5ZD, has been named Director of the CQ World Wide WPX Contests, effective immediately. Thompson succeeds Steve Merchant, K6AW, who has been WPX Contest Director since 2002 and who needed to step aside due to business obligations.

Randy Thompson has been a contester for more than three decades and has multiple wins to his credit in the single-op, all-band categories of both the CQ World Wide DX Contest and the CQ WPX Contest, in both CW and SSB modes. He is also a past editor of the "National Contest Journal" and a co-founder of the eHam.net website. He is a longtime member of the Yankee Clipper Contest Club and an instructor at K3LR's Contest University. In the past year, Randy has been working with Steve Merchant behind the scenes on the WPX contests, so he is already familiar with the program from the administrative side. (CQ)

**

NAMES IN THE NEWS: CQ ANNOUNCES INDUCTEES TO ITS HALLS OF FAME

CQ magazine has announced its 2008 Hall of Fame inductees, welcoming 14 new members into the CQ Amateur Radio Hall of Fame, three new members of the CQ DX Hall of Fame and two new members of the CQ Contest Hall of Fame.

The CQ Amateur Radio Hall of Fame honors those individuals, whether licensed hams or not, who have made significant contributions to amateur radio. Also honored are those amateurs who have made significant contributions either to amateur radio, to their professional careers or to some other aspect of life on our planet.

For a complete list of this years inductees please visit the news pages at www.cq-amateur-radio.com. (CQ)

ENFORCEMENT: SF CB-ER'S FINED FOR OUT OF BAND OPERATION

Turning to enforcement news, Citizen Radio operators Martha S. and Miguel G. Campos, San Jose, California have been fined $800. This, for operating a modified CB radio station on a frequency not authorized for this use. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

In a May 21st release the FCC says that back on April 7, 2006, the Enforcement Bureau's San Francisco Office received a complaint alleging intentional interference to CB radio communications on 27.055 MHz. The complaints alleged that the source of the interference was located at the residence of CB radio operators, Martha and Miguel Campos in San Jose.

On August 24, 2006, after subsequent complaints, the San Francisco Field Office issued a Warning Letter to Miguel Campos. The letter informed him that, pursuant to Section 95 of the Commission's Rules he must operate his CB station only on the 40 channels allocated to the CB service. Mr. Campos was also warned that if the transmissions continue, and if an investigation indicated that he had violated the Communications Act or any FCC Rules, he could be subject to severe penalties, including substantial monetary forfeitures. On August 31, 2006, Mr. Campos replied to the letter acknowledging that he was a CB operator and detailing the CB equipment that he used.

On September 29, 2006, in response to continued complaints, the San Francisco Office issued a similar Warning Letter to Martha S. Campos. On October 27, 2006, Martha and Miguel Campos came to the San Francisco Office to discuss the warning letters they had received. A San Francisco agent clarified some of the CB Rules to them and again warned them about the consequences of not following them. None-the-less, during the period of November 2, 2006, to February 2, 2007, the San Francisco Office continued to receive complaints alleging interference by the Campos. So on March 16, 2007, San Francisco agents, using mobile direction finding techniques, located the source of the alleged interfering signal on 27.675 MHz to the Campos' residence in San Jose,. The agents also conducted an inspection of the Campos' CB station. By conducting on/off tests, the agents confirmed that one of the transmitters had been modified to operate on frequency 27.675 MHz. This is a frequency that is not authorized for use by CB stations. The agents further determined that the transmitter set up in the Campos' residence was capable of operating in excess of the four-watt power limitations.

From April 10, 2007, to September 10, 2007, the San Francisco Office continued to receive complaints alleging interference by the Campos. On October 31, 2007, the San Francisco Office issued a Notice of Apparent Liability or NAL in the amount of $10,000 to the Campos. It charged that they had apparently willfully violated Section 301 of the Communications

Act by operating a modified CB radio station on a frequency not authorized for Citizens Band radio use.

On January 16, 2008, the Campos filed a response claiming that they did not have the ability to pay the forfeiture. They also argued that did not comprehend the severity of the situation, in part because they were not able to read English. However, from the earlier meeting with the FCC it was obvious to the Commission that Miguel Campos was able to understand English in spoken form. Because of this, that part of the Campos defense was disallowed.

However, to support this claim that they could not afford to pay the $10,000 the FCC was trying to assess, Mr. And Mrs. Campos supplied tax returns for the three years prior to the N-A-L being issued. In analyzing this financial hardship claim, the FCC reviewed the data supplied by the Campos. In the end the FCC concluded the claim to be valid and that reduction of the forfeiture from $10,000 to $800 is warranted.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The Campos' were given the customary 30 days to pay the fine or to file a further appeal. (FCC)

D-STAR NEWS: WY1U SAYS TO NOT USE CLONED D-STAR INFO SITE

Tim Mik, WY1U, says over the D-Star re-mailer that the D-Star Search Page that he created and updates daily has been copied. This, without his approval by another group or individual in the United Kingdom who has placed it on the World-Wide-Web using its own URL.

Tim says that the U-K site was not given permission to copy his page. He says that he has asked the owners to place a link to the original page instead, but they have ignored his request to do so. So Tim is instead asking all D-Star user to ignore the U-K based clone and come directly to his website for the latest D-Star operational information. It's a simple URL at www.dstarsearch.org. (D-Star Reflector)

**

EMERGING TECHNOLOGY: A POSSIBLE ROBOTIC THREAT TO 70 CM

Howard Gordon, W3CQH, reports over the VHF Reflector on a Public notice posted by the FCC. This, on a proposal to use 430 to 448 MHz for remotely-controlled surveillance robots for emergency use.

Gordon says that for the power proposed and the limited use, Ithat he does not believe the device will cause any significant interference to the amateur radio service. But he says that the real issue for the manufacture is how to stop the hams from interfering with the surveillance device.

W3CQH says that the possible threat to ham radio may be that once the manufacturer has its foot in the door on 440mhz, it could conceivably start petitioning the FCC for channelization to be done and assigned to it citing interference problems that have occurred in some future alleged emergency situations.

You can read the full FCC release on this robot device at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-1077A1.pdf (W3CQH via VHF Reflector)

PROPAGATION REPORT: SOLAR CYCLE DELAYED A YEAR

The next 11-year cycle of solar storms will most likely start next March and peak in late 2011 or mid-2012. That's up to a year later than expected according to a forecast issued today by NOAA's Space Environment Center in coordination with an international panel of solar experts. (NOAA, QRZ.COM)

**

DX

In D-X, word that DF1LON is going to spend his holidays on Jersey Island. He will be there through May 28th but his main activity will be as MJZ0LON in the upcoming WPX CW Contest. He will work both CW and SSB before and after the WPX. QSLs via DF1LON, direct or via the bureau.

And listen out for LA5LJA, and LA7FJA, will be on from Svalbard using CW, SSB and some digital modes on all the H-F bands. They will be signing the calls JW5LJA and JW7FJA from May 25th to June 1st. QSLs to their home calls via the bureau.

Lastly, JA1XGI has announced he will operate from East Kribati as T32XG from May 27th through June 3rd. He plans to use CW, SSB and some digital modes on 40 through 15 meters. QSL his operation to his home call, either direct or via the bureau.

(Above from various DX news sources.)

**

THAT FINAL ITEM: WELCOME TO A NEW EXTRA

And finally this week we return to the Dayton Hamvention for an important moment of a young ham. Meet Tiffini Ravitch, KC2TFO, of New Jersey. She had come to Hamvention in the hope of going home with a General class license. Instead she went home with the top of the line as an Extra. Here's her story as she told it to our Producer Bill Pasternak, WA6ITF and ham radio educator Gordon West, WB6NOA:

--

Audio only: Please download the mp3 audio version of this newscast at www.arnewsline.org

--

And from all of us at the Amateur Radio Newsline congratulations we also say congratulations to Tiffini Ravitch, KC2TFO, on getting her Extra to take home as a lasting momento of Hamvention 2008. Needless to say we could use a lot more like her in the hobby.

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline". Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's" only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline", P.O. Box 660937, Arcadia, California 91066.

Before we go, another reminder that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year Award ends at midnight on May 30th. Nominations postmarked after that time or received electronically after that time will not be considered. A nominating form as a dot pdf file is available at our special Young Ham of the Year website at www.yhoty.org. Download it, fill it out and send it to us by US mail or electronically.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

I respectfully disagree:

http://en.wikipedia.org/wiki/D-STAR

to quote the relevant part:

"D-STAR has been criticized for its use of a patented, closed-source proprietary voice codec (AMBE). [4] Hams do not have access to the detailed specification of this codec or the rights to implement it on their own without buying a licensed product. Hams have a long tradition of building, improving upon and experimenting with their own radio designs. The modern digital age equivalent of this would be designing and/or implementing codecs in software. Critics say the proprietary nature of AMBE and its availability only in hardware form (as ICs) discourages innovation."

end quote

> Wow.

Understood. I'll skip most of the post because I'm not looking for a sentence by sentence rebuke here. Let's just take it that you don't like my ideas, and we'll move on.

My thoughts are that having some sort of device that young people can use to communicate with each other, in a manner such are they are used to, such as texting, might just be a good thing. Add a couple more friends, and you have a VHF chat room. No need for repeaters, no need to intrude on other people's BW. The idea isn't to forge some new technology. Too many people get caught up in that. It is an application of available technology in a way that some folk might not see as useful, but others might.

==> AMERICAN RED CROSS RESPONDS TO ARRL CONCERNS REGARDING BACKGROUND CHECKS

At the ARRL ARES forum at the Dayton Hamvention, ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, announced that the American Red Cross (ARC) has finally moved to the issue of background checks for ARES volunteers.

In November 2007, ARRL President Joel Harrison, W5ZN, wrote to the American Red Cross (ARC) regarding concerns voiced by ARRL volunteers. In 2006, the Red Cross stated it would implement background checks that included, among other things, a credit check and a "mode of living" check for its staff and volunteers, including ARES volunteers providing services to the Red Cross during disasters. ARRL saw these portions of the background check as unneeded and inappropriate for ARES service.

In a letter dated May 8 of this year, Armond T. Mascelli, ARC Vice President for Disaster Response Services replied to President Harrison: "I can now report back to you that [these] actions have been completed and changes have been instituted which I trust resolves the concerns detailed in your letter. This effort took considerably more time and attention than originally envisioned, but I believe the results will now benefit our respective organizations.

"A new background consent form now [is] to be used by all Red Cross chapters for ARRL members and other partner organizations. The form and related process is limited to the name and social security number verification of the individual, and a criminal background check. References and suggestions to other related investigative possibilities have been stricken."

Harrison said that "We are very pleased that the American Red Cross has addressed some of the issues that we raised regarding their background investigations and that we can move forward in a relationship that has existed for a long, long time. The American Red Cross and the ARRL have shared a productive relationship for many years which has been of benefit to both the organizations and to the public. We are glad that throughout the past months we have been able to negotiate the issues that we had and have finally come to a resolution."

With the background check issue apparently resolved, the ARRL will be working with the ARC in the negotiation and creation of a draft for a new "Memorandum of Understanding" (MOU) or similar document to replace the one which expired last year; Dura and Keith Robertory of the ARC will be leading the effort. When complete, the draft of the MOU will be presented to the leadership of both organizations for approval.

"While we believe that the Red Cross is implementing some changes that will address some of the concerns expressed to them by ARRL, at this point, it is work in process," said ARRL Chief Operating Officer Harold Kramer, WJ1B. "There are many questions yet to be answered, but we believe that the Red Cross is progressing in good faith to complete the changes to their policy and their background check consent form, which was the primary concern expressed to the Red Cross by ARRL. There will be more clarifications and information in the near future. Please keep an eye on the ARRL Web site for updates as we know them. We are very much aware of your concerns and have conveyed them to the Red Cross. We expect the Red Cross to address these and other concerns on subject of their background check policy in the near future."

"The ARRL is very pleased that the American Red Cross has responded appropriately to our concerns about the background check issue," said ARRL Chief Executive Officer David Sumner, K1ZZ. "We believe it now will be possible to go forward to negotiate a statement of understanding between the two organizations. We look forward to renewing and expanding the relationship with the Red Cross."

Dura warns that when requesting a background check on the ARC Web site, volunteers from partner agencies, such as the ARRL or ARES, should select "I am an ARC partner" when asked "What is my Red Cross role?" Otherwise, he says, volunteers will see the background check form that asks for "everything."

==> FCC'S BILL CROSS, W3TN, CALLS HAM RADIO "BELOW THE RADAR"

William Cross, W3TN, a staff member in the FCC's Wireless Telecommunications Bureau, and Riley Hollingsworth, Special Counsel for the Spectrum Enforcement Division of the FCC's Enforcement Bureau, spoke at the FCC Forum on Saturday afternoon at the 2008 Dayton Hamvention. Cross opened by explaining just where Amateur Radio falls in the FCC's bureaucracy.

"The Mobility Division of Wireless Telecommunications Bureau has the oversight of the Amateur Radio Service," Cross said. "We handle the day-to-day administration of the Amateur Service and some of the rulemaking activities that affect the Amateur Radio Service. The Gettysburg office handles applications, licensing -- including vanity calls -- and the ULS. Within the Commission, other bureaus also make rules that affect you. The Office of Engineering and Technology handles spectrum allocations and equipment issues. Our Managing Director's Office is the office that handles matters relating to fees, such as the fees relating to vanity call signs, Debt Collection Improvement Act matters, the need for Federal Registration Numbers."

Cross divided comments into two areas: Proceedings where the Commission has issued a decision and rulemaking requests that have been filed with the FCC, but which are pending resolution by the Commission.

Calling the past year "interesting, because it has been a quiet year on the regulatory front," he said that no big rulemaking items were released. "This being an election year, there doesn't seem to be any legislation on Capitol Hill that is of direct interest or impact on the Amateur Service. This year is a good time for Amateur Radio to be flying 'below the radar,' and that's where ham radio is right now in terms of the big picture -- below the radar," Cross said. "We wrapped up a couple of Petitions for Rulemaking [PRM] that were pending and it doesn't look like (at least in the near future) there will be anything else coming out."

One of the cases the FCC issued a decision on was what Cross referred to as the Miller Order. This Order, released May 7, dismissed a PRM from Mark Miller, N5RFX. Miller sought three points: To delete the FCC's 2006 addition to how it defines data, to amend the rules to prohibit automatically controlled stations from transmitting on frequency segments other than those specified in Section 97.221(b), and to replace the symbol rate limits in Section 97.307(f) with bandwidth limitations.

"The effect of these changes," Cross explained, "when taken together, would have been, as [Miller] said, 'A small number of wider bandwidth modes, including Pactor III, would no longer be authorized.' Translating that into English, what he was asking for was 'bye-bye Winlink.' Don't get me wrong -- Winlink as a communications system seems to have become the 'Brussels sprouts of ham radio' -- you either love it or you hate it. And trying to bury it under ketchup or hollandaise sauce hasn't changed the basic like or dislike for Winlink. Most of the controversy here seems to swirl around how certain licensees use it. Some use it for a radio e-mail system. Others use it for getting weather maps while they are on sailboats in places the brave dare not go. Others use it for their personal business activities, such as buying and selling stocks. These uses are really a Section 97.113, a 'prohibited communications' question, not a technology question."

Cross mentioned that there are "some things coming down the pike that you want to keep track of. The ARRL has a pending petition -- RM 11325 -- that requests that we amend the rules that apply to the power stations may use when transmitting spread-spectrum emissions -- BPL. The DC Circuit Court of Appeals remanded the FCC's final BPL rules. The Court did not vacate the rules, so they are still in effect. There will be another proceeding to address what the Court told the Commission it had to address."

The Northern California Packet Association has filed a request for clarification that the FCC define what is meant by the term "simultaneously" as it is used when defining a repeater. "The issue here is that in California," Cross explained, "D-STAR repeaters have been coordinated on channels that are set aside for auxiliary stations, on the basis that, because there is a delay in retransmission of the signal, the retransmission is not simultaneous, and therefore the repeating station is not a repeater." Cross said others have advanced what he calls "the duck argument: If the station looks like a repeater, if it functions like a repeater, and it sounds like a repeater, it should be treated as a repeater -- and confined to the repeater subbands. A decision on this will be coming [from the Commission] shortly."

When Hollingsworth stepped up to the podium, he spoke about what he called "the magic of radio," saying, "we need to realize the debt we owe to those who work so hard to further the goals of Amateur Radio, whether it's the Emergency Communications participants, club members, teachers, VEs, the League. One of the richest rewards in doing something is to experience joy in doing it. And with so many people working so hard on their own time to further the goals of Amateur Radio, we're all a little more free to enjoy radio and to make it fun as well as a public service."

Saying that "things have calmed down a lot in the Amateur Radio Service," Hollingsworth explained, "[that] when it comes to the Amateur Radio Service, there's one enforcement tool we need very badly and we just don't have it -- and that's straitjackets," he deadpanned, eliciting guffaws from the crowd of more than 150 people. "Some days I want to ask, 'Why can't everybody just get along?'"

Hollingsworth noted that since the 75 and 80 meter phone band has been expanded, "a lot of these regular small groups, ragchews and some of the Nets should consider "spreading out, because a lot of the regular operations every night are clumped together. Yes, there are still interference issues and interference allegations, but if everybody would spread out a little bit, now, it's going to take a real change of habit by a group that has used the same frequency for 40 years to talk across the state, but you really need to spread out and take advantage [of the band] expansion."

He also noted that interest in Morse code "seems to be higher than ever before." On the enforcement side, Hollingsworth said he has noticed "no difference in enforcement problems related to no-code, and I think I'm seeing more young people at events that I go to." He reminded audience that only 1 percent of Amateur Radio licensees filed comments in the Morse code Proceeding. "I see the new code keys for sale here, and I always see a big crowd of people around anything related to code or code keyers. I think the interest has really peaked."

Hollingsworth pointed out a 12 year old boy who sat in the front row. When asked, the boy responded he received his license three years ago when he was 9. "The future President of the League might be sitting right there," Hollingsworth explained, pointing at the boy. "That's our future, right there, and we're depending on you. We need a lot more young people and I think that Morse code seems to interest young people -- hopefully they're getting tired of instant messengers and the Internet. Last night someone told me about a 14 year old Net Control Operator on a national Net."

Calling for "more courtesy" on the Amateur Radio bands, Hollingsworth said, "This fighting amongst yourselves is the worst thing that you can do. You have some rude operators and operators who don't care and who are hateful and bitter about life in general, but every group has that, whether it's doctors, electricians, lawyers, plumbers, whatever, every group has a certain percentage of people like that. What you have to do is to remind yourself every day to stay on the high road and report to us if you can't resolve a problem after you've given it a chance to go away. There are plenty of ugly situations in the world and you don't have to add to them. Now, there are a few idiots in your Service who know all the answers, only because they haven't thought of all the questions. They just want recognition and reaction. Don't give it to them. Don't be baited. Don't feel insulted -- they are their own worst punishment. Don't dignify them with a response."

Hollingsworth implored the audience to "never let the Commission get by again with handing you 10 to 12 years of neglect. You have to stay vigilant. Even though the bands may sound better to you, you have to be vigilant to protect your Service, and be part of the solution -- not the problem -- and operate as if the whole world is listening, because generally it is."

You can listen to the FCC Forum in its entirety on the ARRL Web site <http://www.arrl.org/news/images/nms/other/FCCForumMP3.mp3>.

==> NEW SECTION MANAGERS TO TAKE OFFICE JULY 1

In the only contested Section Manager race this spring, Paul Eakin, KJ4G, was elected as the ARRL Northern Florida Section Manager with 430 votes. Dale Sewell, W4NBF, received 385 votes, and Carl Zelich, AA4MI, received 370 votes. Ballots were counted May 20 at ARRL Headquarters.

Eakin's two-year term begins on July 1; he will be stepping into the office that has been held by Rudy Hubbard, WA4PUP, since 1990. Hubbard has served nine continuous terms of office. A Life Member of ARRL, Eakin is from the Tallahassee area and he has been a licensed radio amateur since 1969. He has a strong background in Emergency Communications and many years of emergency service experience.

The ARRL Northern New Jersey Section is getting a new Section Manager starting on July 1, as well: Richard Krohn, N2SMV, of Manalapan, will be taking over the reins from Bill Hudzik, W2UDT, who has served as Section Manager since 2001.

The following incumbent ARRL Section Managers did not face opposition and were declared elected for the next two year terms of office beginning July 1: Tom Ciciora, KA9QPN (Illinois); Bill Woodhead, N1KAT (Maine); Bonnie Altus, AB7ZQ (Oregon); Bill Dale, N2RHV (Santa Clara Valley); Paul Gayet, AA1SU (Vermont), and Don Michalski, W9IXG (Wisconsin).

Nominations for the Indiana Section Manager position will be resolicited in July QST for an 18-month term of office beginning in January 2009.

==> CQ ANNOUNCES 2008 HALL OF FAME INDUCTEES

Just before Hamvention weekend, CQ magazine announced its 2008 Hall of Fame inductees, welcoming 14 new members into the CQ Amateur Radio Hall of Fame, three new members of the CQ DX Hall of Fame and two new members of the CQ Contest Hall of Fame. The CQ Amateur Radio Hall of Fame honors those individuals, whether licensed hams or not, who have made significant contributions to Amateur Radio; and those amateurs who have made significant contributions either to Amateur Radio, to their professional careers or to some other aspect of life on our planet. The CQ Contest and DX Halls of Fame honor those amateurs who not only excel in personal performance in these major areas of Amateur Radio but who also "give back" to Amateur Radio in outstanding ways.

The 2008 inductees to the CQ Amateur Radio Hall of Fame (listed alphabetically) are:

Gaston Bertels, ON4WF -- Honorary President, former President and CEO, UBA (Belgian IARU Member-Society); Founder & President, AMSAT Belgium; Chairman, ARISS Europe.

L. B. Cebik, W4RNL (SK) -- Noted antenna authority, prolific author on topics relating to antennas and antenna modeling. One of Cebik's last articles for QST, "A New Spin on the Big Wheel," appeared in the March 2008 issue. The article, co-written with Bob Cerreto, WA1FXT, looked at a three dipole array for 2 meters. This was a follow-up to their article in the January/February issue of QEX that featured omnidirectional horizontally polarized antennas. Cebik authored the "Antenna Options" column for QEX. Cebik, an ARRL Life Member, passed away last month at age 68.

Gordon England, ex-W3AWO -- Deputy Secretary of Defense; former Secretary of the Navy; former defense industry executive.

Admiral Edmund Giambastiani, N4OC -- Retired Vice Chairman, Joint Chiefs of Staff.

Gerald Griffin, MD, K6MD -- Brigadier General, Medical Corps, US Army (Retired). Led medical brigades and humanitarian missions in various combat zones; delegate to NATO medical advisory committee

Larnelle Harris, WD4LZC -- Multi-award-winning gospel singer/songwriter.

Lenore Jensen, W6NAZ (SK) -- Co-Founder, Young Ladies' Radio League (YLRL). Jensen wrote articles for QST, such as "Ask Not What Amateur Radio Can Do for You" (September 1978) and "California Hams Assist During Mud/Flood Crisis" (June 1980). During the 1930s, she acted in the radio drama Ma Perkins and later starred with McDonald Carey in the Lock Up TV series. Jenson was featured on This Is Your Life for her important contributions during World War II. After Pearl Harbor, she founded radio training courses for the American Women's Voluntary Service (AWVS), specializing in phone patches between servicemen overseas and their families, running more than 50,000 phone patches during the Vietnam War. Jensen's stepdaughter, Cynthia Wall, KA7ITT, wrote several ham radio-related adventure books for young people that were published by the ARRL.

John Kanzius, K3TUP -- Inventor of possible cure for cancer using RF energy; process for possible use of seawater as fuel. Kanzius's work was featured in the February 2008 issue of QST.

Charles (Chip) Margelli, K7JA -- DXer and DXpeditioner; in 2005, successfully represented hams in Morse code vs text-messaging competition on The Tonight Show with Jay Leno. He has written several articles for QST since 1973, including "Field Day 2003 from Cuba" in the December 2003 issue. In his capacity as Vice President for Amateur Sales and Marketing for Heil Sound, Margelli arranged the donation of equipment to The Laird Campbell Memorial HQ Operators Club station, W1HQ.

Philip S. Rand, W1DBM (SK) -- TVI pioneer; author, Television Interference. Rand was an electronics engineer for the Remington-Rand Corporation in the late 1940s, when Amateur Radio faced a crisis in the form of interference to the early VHF television sets. Rand worked with the ARRL to develop TVI suppression techniques for channels two through six. ARRL's then-Technical Editor George Grammer, W1DF, designed high pass filters for the primitive TV sets, while Rand developed new methods of shielding for amateur transmitters. Rand published articles in QST Magazine spanning 50 years, from "A Shack on Wheels" in 1933 to "The Beeper, An Audible Frequency Readout for The Blind Amateur" in September 1983. Rand served as ARRL New England Division Director in 1955 and 1956.

Vice Admiral Scott Redd (Retired), K0DQ/A92Q -- Former Director, National Counterterrorism Center; Retired Commander, US Fifth Fleet; active contester and DXer.

Tony Tether, PhD, K2TGE -- Director, Defense Advanced Research Projects Agency (DARPA)

Dr Hamadoun I. Toure, HB9EHT -- Secretary-General, International Telecommunication Union (ITU). Dr Toure received his Amateur Radio license in October 2007. An interview with Dr Toure appears in the May 2008 issue of QST.

John Townsend, PhD, W3PRB -- Space program pioneer, aerospace industry executive.

The 2008 inductees to the CQ DX Hall of Fame are:

John Devoldere, ON4UN, who more or less single-handedly popularized DXing on 80 meters. His book, Low Band DXing, the last several editions of which have been published by the ARRL, is considered the "bible" for

DXing on these bands, with more than 50,000 copies sold. In 1979, Devoldere was the first ham to earn CQ's 5-Band Worked All Zones (5BWAZ) award; he holds 80 meter DXCC Certificate #1 and currently has 357 countries confirmed on that band.

Nellie Saltiel de Lazard, XE1CI, a pediatrician and DXer/DXpeditioner, has earned just about every major DXing award. She has operated from more than a dozen different countries, including being the first female to operate from Palestine (E4).

Bob Schenck, N2OO, has made his greatest contribution to DXing behind the scenes as QSL manager for more than 100 DX stations as well as more than 130 DXpeditions. Schenck is founder of the QSL Manager's Society.

The 2008 inductees to the CQ Contest Hall of Fame are:

Paolo Cortese, I2UIY, has too many Top 10 finishes to list. Off the air, he served for more than a decade as the HF Contest Manager for Associazione Radioamatori Italiani, Italy's national Amateur Radio association and IARU Member-Society. Cortese wrote a book on contesting and has been a member of the CQWW Contest Committee since 1990, co-director of the CQ WW RTTY DX Contest and CQ WPX RTTY Contest since 2005. He has also written articles for QST and NCJ.

Randy Thompson, K5ZD, has multiple wins in the CQ World Wide DX Contest, ARRL Sweepstakes, CQ WPX (CW and SSB), CQ 160 and the IARU HF Championship. His station has also hosted many #1 performances by guest operators. Thompson is three-time editor of the National Contest Journal (NCJ) and co-founder of the eham.net Web site. He has just been named Director of the CQ WPX Contests. Thompson is a member of the Yankee Clipper Contest Club (YCCC).

==> FCC'S HOLLINGSWORTH SET TO RETIRE IN JULY

Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth has announced plans to retire from the FCC later this year. "My intention," Hollingsworth told the ARRL, "is to head out in July, assuming the results of the second round of the PAVE PAWS/440 repeater monitoring in California present no complications. It has been a privilege to work with and for the Amateur Radio licensees and the land mobile frequency coordinators. I am extremely fortunate to work for two wonderful groups of people: Those at headquarters in the Enforcement Bureau, and for the Amateur Radio operators." Hollingsworth had planned to retire earlier this year, but changed his mind, saying, "There [were] several issues on the table that I want[ed] to continue to work through with the amateur community."

While his successor has not been named, he was quick to point out that the FCC's Amateur Radio enforcement program will continue.

Hollingsworth said he considered it an honor to have given something back to "the incredible enjoyment and benefits that Amateur Radio has given me since age 13. And to every one of the thousands of you that thanked us for our work, many of whom waited for long periods after a forum or radio meeting just to come up and express appreciation for what the FCC was doing in enforcement, you have no idea how much that was appreciated every single time. It sure wasn't a 9 to 5 job, but it was a gift and a daily joy to work for the best group of people on earth. The only bad day in nearly 10 years was September 21, 2001, when we lost Steve Linn, N4CAK. We still miss him." Linn, deputy chief of the Licensing and Technical Analysis Branch for private wireless within the Wireless Telecommunications Bureau, and his wife Lesley were killed in a car accident on their way to the Virginia Beach hamfest.

Hollingsworth told the ARRL he was "so very impressed" with the young people who are involved with Amateur Radio: "To the very young Amateur Radio operators I met at Dayton, who have dreams of being scientists and astronauts and communications engineers, we will be pulling for you; I have a strong feeling we won't be disappointed."

"The Amateur Radio Service is part of the American heritage, and I am going to stay as actively involved in it as I possibly can," Hollingsworth explained. "Thank you all for working tirelessly to provide the only fail safe communications system on Earth and for helping this country keep its lead in science and technology. What an incredible gift it has been to work with you every day, and how fortunate we are to love the magic of radio!"

==> FCC POSTS AMATEUR RADIO ENFORCEMENT CORRESPONDENCE

Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth sent a Warning Notice to Thomas A. Nichols, WA6BKR, of Fairfield, California -- a General class licensee - reminded Nichols that on February 28, 2008, the FCC notified him once before, "the Enforcement Bureau indicated that in September 2004 and on various dates since October 2007 you operated on frequencies assigned to Extra class licensees but prohibited to General class licensees."

According to the Warning Notice, Nichols replied to Hollingsworth's February letter, conceding "an instance in which you operated in the Extra Class portion of the band and gave numerous reasons and comments on the Morse code exam, Amateur Radio in general, the Extra Class examination and other radio and kit building topics not relevant to your out-of-band operation."

Hollingsworth warned Nichols that "any additional out-of-band operation may lead to revocation of your license or a monetary forfeiture." Nicholls was also warned that his license would not be renewed or upgraded "until such matter is resolved."

Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to Riley Hollingsworth <fccham@fcc.gov> in the FCC Spectrum Enforcement Division.

==>SOLAR UPDATE

Tad "Born of Sun and shower" Cook, K7RA, this week reports: This week several new sunspots appeared for five days, but they were all leftover spots from Solar Cycle 23, not new Cycle 24 spots. But this is okay, because at the sunspot minimum we appreciate any spots we can get. May 16-20 saw daily sunspot numbers of 34, 23, 30, 28 and 23. Sunspot numbers for May 15- 21 were 0, 34, 23, 30, 28, 23 and 0 with a mean of 19.7. The 10.7 cm flux was 71.1, 71.6, 71.2, 71.6, 68.9, 68.6 and 69.1 with a mean of 70.3. Estimated planetary A indices were 4, 4, 2, 3, 8, 10 and 13 with a mean of 6.3. Estimated mid-latitude A indices were 2, 3, 1, 2, 5, 7 and 9, with a mean of 4.1. Keep in mind that a sunspot number of 34 does not mean there were 34 sunspots last Friday. Instead, the numbers represent a somewhat arcane calculation that accounts for the number of sunspot groups and the size of each group. The count gets 10 points for each sunspot group and one point for each spot within the groups, the designation of these different areas within the groups seeming somewhat arbitrary to a layman such as myself. So 34 could mean that there are three darkened areas, with one of them counting as two spots, the other two just one each. Presumably, the same number would describe the Sun with two darkened areas facing Earth, and each counting for seven spots. Thirty plus four is the same as 20 plus 14, but this week there were three areas. Expect quiet geomagnetic conditions and another prediction for a planetary A index of 25 just before the start of summer on June 17. Geophysical Institute Prague calls for unsettled conditions May 23-24, quiet to unsettled May 25, quiet May 26, quiet to unsettled again on May 27-28 and unsettled for May 29. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend is VK/Trans-Tasman 80 Meter Contest (CW) on May 24. The CQ WW WPX Contest (CW) is May 24-25. The MI QRP Memorial Day CW Sprint is May 27. The MI QRP Memorial Day CW Sprint is May 26-27. The ARCI Hootowl Sprint is May 27 (local time) and the SKCC Sprint is May 28. Next weekend is ARRL Kids Day on May 31-June 1. The RSGB 80 Meter Club Championship (Data) is June 2. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 8, 2008, for these online course sessions beginning on Friday, June 20, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio

Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Chinese Olympic Special Event Stations Are On-the-Air: Special Event stations for the 2008 Beijing Olympic Games began operating May 18, running through Wednesday, September 17. Five special calls, representing the five rings of the Olympic flag, will be on the air: BT1OB, BT1OJ, BT1OH, BT1OY and BT1ON. The last letter of the call sign corresponds to the color of each of the rings of the Olympic flag -- Beibei (Blue), Jingjing (Black), Huanhuan (Red), Yingying (Yellow) and Nini (Green). Zheng Feng, BA4EG, will be the QSL manager for all stations. QSLs can be sent either direct or via the bureau and will begin to be answered in October. A Web site supporting the Special Event stations will include an on line log search, QSL card received and sent status, as well as other information <http://www.bj2008ses.com.cn/>; award criteria will soon be posted on the site. -- Thanks to "The Daily DX" for this information

* New Amateur Radio Satellite Receives OSCAR Designation: Earlier this week, Bill Tynan, W3XO, announced that Amateur Radio satellite Delfi C-3 <http://www.delfic3.nl/> has been issued an OSCAR number: Delfi-C3 OSCAR-64 or Dutch OSCAR-64. The shortened version of either of these two designations is DO-64. Delfi C-3 was successfully launched April, 28, 2008 from India aboard a Polar launch vehicle and was successfully commissioned, currently transmitting telemetry on the 2 meter amateur band. In addition to its 2 meter downlink, Delfi C-3 has an uplink on the 70 cm band. This newest amateur satellite was developed by a team of some 60 students and facility members from various polytechnic schools in The Netherlands. Delfi C-3 carries two experiments: one involving thin film solar cells developed by Dutch Space, and an autonomous wireless Sun sensor from the Dutch Government Research Institute (TNO). According to Delfi C-3 Project Manager Wolter Jan Ubbels, Delfi C-3 has been duly coordinated through Region 1 IARU representative Graham Shirville, G3VZV, that the satellite meets all of the criteria necessary to be issued an OSCAR number. "AMSAT-NA is pleased to welcome DO-64 into the family of Amateur Radio satellites," Tynan said. "We are hopeful that it will fulfill its intended mission of furthering education and increasing interest in the Amateur Radio space program. We congratulate all of those responsible for designing, building, testing and launching this new Amateur Radio satellite and look forward to its long and

productive life."

* Nominations for Young Ham of the Year Due May 30: Nominations for Amateur Radio Newsline's Young Ham of the Year award are due no later than May 30. According to AR Newsline's Bill Pasternak, WA6ITF, "We have not received any nominations for this year's award. Not a single one by e-mail. Not a single one by the US mail. Not even a phone call or e-mail asking for a nominating form." He said that due to everything needed to take place in preparation for the award ceremony, "it is impossible to extend [the deadline] beyond [May 30]. Any nomination received electronically after midnight May 30 or postmarked after midnight on May 30 will be deemed ineligible. If no valid nominations are received by that cutoff date and time, the award program for 2008 will be cancelled." Pasternak defined "valid nomination" as a nomination for "a youngster age 18 or younger who has made a major contribution in some way to the betterment of Amateur Radio. This can be through public service, technical development, contributions to the state of communications sciences, recruitment of new hams or whatever seems to be an accomplishment worth honoring. What is not acceptable are nominations that say something like, 'My 7 year old just passed his tech test so give him a radio.'" The Young Ham of the Year Award is open to any ham age 18 or younger living in the 50 United States, plus Puerto Rico and all Canadian Provinces. A full set of rules, along with a downloadable nominating form is online <http://www.yhoty.org>. The form must have the required substantiating material attached to it. Mail the form and additional material to Amateur Radio Newsline, YHOTY, 28197 Robin Ave, Santa Clarita, CA 91350.

* Notes from the ARRL Contest Desk: ARRL Contest Branch Manager Sean Kutzko, KX9X, has announced that, after receiving numerous requests, he has started a contest blog called Notes from the Contest Branch. "I have just returned from my very first trip to Dayton in 26 years of being licensed. It was a great experience. I'm glad I was able to help answer some of your questions and listen to your suggestions -- and yes, even some constructive criticism. One of the suggestions bandied about was an official Contest Branch blog. Your wish is my command." Kutzko said the new blog will be a place where he can post "official information on all things Contest-related, such as when results for ARRL contests are put online, when awards are going out the door, and if there are any problems you need to know about. This blog will cover both HF and VHF+ contests. I hope this will help keep you informed on happenings here at the Contest Branch. As always, I strive to be available to you. Feel free to drop me a line with any questions, comments, or constructive criticism. Compliments are welcome, too." View the new ARRL Contest Branch blog, as well as other ARRL bogs, on the ARRL blog page <http://www.arrl.org/blog>. Kutzko can be reached via e-mail <kx9x@arrl.org>.

* Notes from the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, reports that the 2008 TI9KK DXpedition to Cocos Island <http://www.ti9kk.dh8wr.com > has been approved for DXCC credit. "If you had cards rejected for this operation, please send an e-mail to the ARRL DXCC Desk <dxcc@arrl.org> to have your DXCC record updated," Moore said.

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org
==>ARRL News on the Web: <http://www.arrl.org>
==>ARRL Audio News: <http://www.arrl.org/arrlletter/audio/> or call 860-594-0384

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

The operative word there, IMHO, is "might".

The Big Problem I see is that ham radio will never be competitive in areas where there is a similar mainstream/commercial alternative. IOW, why would any non-ham with a cell phone that can text want a ham-radio text-message device?

Where ham radio has always been a success is in offering things that are *not* available anywhere else. For example, in the days before cell phones, repeaters and autopatch were a big deal because they offered communications that the average person could not get any other way.

This doesn't mean I'm against anyone building whatever kind of ham rig strikes their fancy, as long as it meets Part 97 rules. All I'm saying is "do what interests you, don't expect it to attract a certain demographic".

Well, there IS Salem Mall for outdoor space... it's got a lot more than
it used to. And, IIRC, there's an abandoned Walmart not too far from there.

Oh? Before ham autopatches were popular on repeaters, the telcos -
both wireline and non-wireline - offered Mobile Telephone Service
(MTS) using mobile operators and Improved Mobile Telephone Service
(IMTS) permitting subscriber dial. Expensive - you bet - but they
were available to the average person. Some of those transceivers
found their way into the ham market after the telcos upgraded to newer
stuff.

The following is just an informal observation...

Here in the USA, we have two regulatory agencies for radio: FCC, which does non-government radio, and NTIA, which does government/military radio. NTIA trumps FCC, of course. The radar-interference case mentioned elsewhere in this thread clearly shows who has priority on the band in question.

But your question is about *commercial* (nongovernment) users/ intruders into the amateur bands, where such use is not part of the regulations.

In theory, those intruders are breaking the law and should be removed by the FCC. In practice, the FCC is complaint-driven, which means amateurs must identify the intruder and complain to the FCC. Helping with such complaints is one of the major functions of the ARRL and its legal department.

But simply complaining to FCC does not mean the problem will be solved, because FCC's resources are very limited. The motorsports story referred to required a lot of work on the part of the ARRL and the amateurs involved.

In some areas, that's true, but in others (such as simple practical HF antennas and transmission lines) things haven't changed very much.

>�Fantasies of some amateur
> radio licensees are still rooted to back then. �Those are lost in

Could you give some specific examples of the paradigms you mean, the "plateau jumps" in technology, and the fantasies you describe?

> Amateur radio is a HOBBY. �Let's try to focus on that.

Amateur radio isn't *just* a hobby, though. The record of public service communication by radio amateurs shows there is a lot more to it, to give just one example.

> Model vehicles are a hobby for others. �The Academy of Model
> Aeronautics doesn't pretend to advance the state of the art of

> frequency channels for radio-control two decades ago.

Let's consider that idea in detail...

Model control radio frequencies consist of those 100 channels near 70 MHz. Power output is limited to 1 watt and the transmitting antenna can be no larger than a quarter-wave monopole.

Model control isn't about using radio for its own sake, which IMHO is the heart-and-soul of amateur radio. Model control is about using radio for a single purpose, as a means to an end.

Does anyone think amateur radio should be limited by rules similar to those for model control? Or that the kind of allocations given to model-control enthusiasts would be adequate for amateur radio?

>�Consider
> that hobbyists are citizens and that the US government does
> listen to its citizens. �Work from that basis.

It seems to me that you are saying that radio amateurs should not talk about their roles in emergency communication (Hurricane Katrina, for example), public service communication (New York City Marathon), experimentation (K3TUP and cancer research), education (Space Shuttle hams), etc. IOW, all that should be deemphasized and ignored.

It seems to me that you're saying we hams should define ourselves as hobbyists *only*, and expect that to be the sole reason we have amateur bands and FCC/ITU protection.

Is that correct?

Jim, N2EY

: > that in the US
: > you can still claim a certain degree of protection from other users,
: > whereas here we can't.
:
: The following is just an informal observation...
:
: Here in the USA, we have two regulatory agencies for radio: FCC, which
: does non-government radio, and NTIA, which does government/military
: radio. NTIA trumps FCC, of course. The radar-interference case
: mentioned elsewhere in this thread clearly shows who has priority on
: the band in question.
:
: But your question is about *commercial* (nongovernment) users/
: intruders into the amateur bands, where such use is not part of the
: regulations.
:
: In theory, those intruders are breaking the law and should be removed
: by the FCC. In practice, the FCC is complaint-driven, which means
: amateurs must identify the intruder and complain to the FCC. Helping
: with such complaints is one of the major functions of the ARRL and its
: legal department.
:
: But simply complaining to FCC does not mean the problem will be
: solved, because FCC's resources are very limited. The motorsports
: story referred to required a lot of work on the part of the ARRL and
: the amateurs involved.
:
: 73 de Jim, N2EY

Ah, thanks. However, over here we do have "legal" intrusions into some of the amateur bands, most are in the microwave region, notably 10GHz, where we lost a sizeable chunk a while back.

The main one though is 431-432 MHz which is not available for use within 100km of Charing Cross (central London) and also for some distance around the military radar installation at Fylingdales in Yorkshire. In the London area I believe it's allocated to taxis of all things..! There isn't a lot of amateur activity in that segment, I think some wide-split repeaters may have inputs or outputs there but generally it's a low-occupancy segment of the band, so all in all it's not a major hassle.

It's the principle of the thing that annoys me, though. Even where we are primary users, such as 2m, we can claim *no* protection from interference, even if the cause of said interference shouldn't be there.

73 Ivor G6URP

Actually, Len, the first "migration" was to the pre-fiber undersea cables. I was involved in moving Israel's circuits off HF onto the Haifa-Marseilles cable (and thence onto the TAT-5 cable) in 1967, several years before the parallel Intelsat satellite service was turned on. We had several ISB circuits to NY - double hop, mind you - and the rest of our circuits were HF to London, Paris, Athens, Moscow, and several other European cities and thence by landline and TAT-5 to the rest of the world. Of course, that all changed when Intelsat and the fiber cables came into service.

Very much out of the spotlight, states and counties have been setting
up HF networks on "commercial" frequencies for disaster relief, search
and rescue, and other functions where VHF/UHF won't do. I'm involved
with that here. This is in parallel with, not supplanting, the
volunteer services that amateur operators are rendering on HF, VHF,
and UHF through the ARES/RACES organizations. Not surprisingly, most
of the career professional Emergency Communication managers of these
governmental units are hams as well.

You've been saying that for years, Len. It's disingenuous at best.

It's accurate to say that none of you had to have an _FCC_ license to do your job. In reality, the "Federal license" that was required was the assignment to your job by military superiors - who could yank you out of there for any reason, real or imagined, effectively 'canceling" that "license". At least the FCC has to hold a hearing at which you can defend yourself.

The first of which (TAT-1) became operational in 1956.

Both the coaxial (copper) and fiber cables under the oceans require
repeaters if their length exceeds 100 km or so. Some of the early
undersea coaxial cables with their vacuum-tube repeaters are still
functional, but their capacity is trivial compared to the fibers.

Great story, Phil! Does any of that remain as a backup? My guess would
be that it is long gone.

>From a capacity standpoint, satellites are the backup now in most
places, because the fiber bandwidth is so much greater.

It wasn't just ionospheric disturbance that pushed the change to
satellites and cable, either. There's only so much useful HF spectrum,
and the newer technologies offer many orders of magnitude greater
bandwidth.

>�Of course, that all changed when Intelsat and
> the fiber cables came into service.

And it continues to change. In this area, direct fiber-to-the-customer is becoming the standard; many homes here have no copper communications and little if any radio reception at all. Everything comes through the fiber - telephone (multiple lines if you want), highspeed internet, and TV. The fiber is RFI-and EMI-immune, too. The biggest headache they present for us hams is that sometimes the switching power supply for the customer equipment is electrically noisy.

IMHO the real threat to Amateur Radio isn't the possible reallocation of the HF amateur bands to other services (although that's always a possibility, and VHF/UHF are not nearly so secure).

The major threat today, I think, is that the bands we have - MF, HF, VHF and UHF - are slowly being made less-usable or even unusable by a combination of factors:

1) Lack of enforcement against intruders, such as unlicensed use of 10 meters by truckers and others, spreading out from 11 meters. This has been a problem since at least the 1970s.

2) Reduction in the number of housing units where a ham can have a reasonable antenna system. Boilerplate anti-antenna CC&Rs have been pretty standard since the 1970s in many areas, and once in place they are often impossible to remove.

3) Consumer electronics that are not adequately RFI proofed.

4) Consumer electronics and other devices that make excessive RF noise in the ham bands. As the number of such devices increases, the noise floor in many locations rises to unusable levels.

5) A regulatory environment where the above problems are simply not given any priority. (You know more about that than I, Phil!)

The biggest headache for the subscriber is that all of the eggs are in one basket and all it takes is some bozo with a backhoe to sever the cable (trunk or drop) and everything goes away.

Things must have changed since my initial training in international
radio regulation in the mid-1960s where the British Post Office (the
forerunner of the RA) was held up as a model of "we'll lock you up if
you don't have a licence to operate there" - and the French were
pointed out as an example of "the ordinary citizen needs a radio as
much as he needs a machine gun".....hams were a grudging exception,
and of course when cellphones became available, everyone got one
because they knew that cellphones were not radios, right? <g>

Then again, the FCC in the US - where I ultimately spent most of my
professional career - was also very involved in "catching bad guys".
The epidemic of unlawful CB operations of the 1970s and 80s - for
which most of the world's governments never forgave the US - and an
unfortunate shift in regard to what the government's obligations were
- changed all that.

Notwithstanding the historical precedents of military-civilian sharing
of frequency bands, granting commercial interests licenses to operate
in the amateur bands is basic bad regulatory policy. All of us
old-time regulation professionals knew that as an article of faith.
The new crop is guided more by the buck (or the Euro, or the quid)
than by what good regulatory policy is.

As far as the military goes, I learned early in the game that de
facto the military of any country can operate on any frequency that it
so desires if (1) it doesn't interfere with anything operating in that
country and it (2) doesn't identify. If it wants to play the
gentleman game the country will notify the operation to the ITU
Radiocommunications Bureau (ITU-R) which now does what the
International Frequency Registration Bureau (IFRB) did before ITU
reorganization. Whether the information is accurate or not is an
exercise left for the listener.

Pikers! Why didn't they apply for 20 kW and REALLY cause interference?? <g> It almost sounds like they are using something "off the shelf" that is being used elsewhere where the ham band ends at 430 MHz. I've seen this stuff before.

My gut feeling is that with the present "leadership" at the FCC (despite the fact that several good friends are in the Homeland Security and Public Safety Bureau and wouldn't support it but for pressure from above) it will be granted on a secondary priority behind all the other secondary priority users. I hope that I am wrong and it is denied.

Another reason to support the ARRL Spectrum Defense Fund.

The main problem in the UK is not the commercial use of 431-432 in the
London area, rather the proliferation of licence exempt low power devices.
Everything from key fobs to weather stations and tower crane anti-collision
systems. They are popping up quite legally all over 70cms.

Even one 70cms repeater was ordered off the air because it was stopping
people from remotely opening their car doors in a nearby carpark!

The UK has a Pave Paws derivative at Fylingdales at that caused a ban on new
repeater applications in 70cms, the military being worried about the
increase in noise floor that additional signals would introduce.

Won't they have a bunch of bandwidth next february
when all the analog TV broadcasting goes dark? Then
they could choose a band that is even better at "building
penetration", etc.

Actually, it's another reason to wish that we had a REAL advocacy organization, like the National Rifle Association, rather than the weak and ineffectual ARRL, which is little better than the FCC's compliant and obsequious lapdog.

: >there.
:
: Things must have changed since my initial training in international
: radio regulation in the mid-1960s where the British Post Office (the
: forerunner of the RA) was held up as a model of "we'll lock you up if
: you don't have a licence to operate there" - and the French were
: pointed out as an example of "the ordinary citizen needs a radio as
: much as he needs a machine gun".....hams were a grudging exception,
: and of course when cellphones became available, everyone got one
: because they knew that cellphones were not radios, right?  <g>

Indeed. My friend Colin G3USA (great callsign, eh..!) tells me that in his
early days on air in the 60's an amateur could expect to be regularly
visited by an officer of the Radio Investigation Service who would check
your logbook and that you knew how to use a wavemeter for example.

In my 25 years of being licensed I've never been inspected once.

Good point: that explains a lot, doesn't it? It all comes down to money,
and given a choice between something ready-made and tested that can be
marked up 10,000%, or a one-of assembly that costs more than you'd ever

dare to charge, the choice seems obvious.

Hmmm, you know, that also explains why 146-148 MHz isn't available to hams in large portions of the world. Lot's of rigs from the U.S. market, easy to buy and use, can be plugged-and-played anywhere the governments choose. Must have been a similar process for 220.

I guess we hams _have_ been experimenters after all: we provided the funding to design and debug reliable gear that will now make life easy for some entrepreneurs. It wasn't the kind of experiment I would have chosen to start myself, but C'est la Vie.

> My gut feeling is that with the present "leadership" at the FCC (despite the fact that several good friends are in the Homeland Security and Public Safety Bureau and wouldn't support it but for pressure from above) it will be granted on a secondary priority behind all the other secondary priority users. I hope that I am wrong and it is denied.
>
> Another reason to support the ARRL Spectrum Defense Fund.

What ever happened to all that TV spectrum that's supposed to be made available for "homeland security" next year? Does a bomb-sniffing robot not qualify, or has the thought of participating in a spectrum auction frightened the manufacturer into an attempted "land grab" instead?

The answer is obvious. You know, I'd like to see Michael Powell's investment portfolio: I bet that there are a lot of good stock tips to be gleaned from it.

If I had been asked to make a choice of whether they _should_ be available, I'd probably have shaken my head sadly and said "No". Given that the PRC-25 covered not only the Low-VHF public safety bands and some TV frequencies, but also the aircraft marker-beacon channel, as well as six meters, I'd have to (reluctantly) agree with whomever else said "No" in this case.

It's a shame, but it's also easy to understand: the FCC was _very_ badly burned by the Citizen's Band fiasco, and I'd bet other government bureaucrats in and out of the military had that fresh in their minds as Vietnam was winding down and the PRC-25's were filling up warehouses.

It's really more simple than that actually. At the end of World War Two, every one thought, "Well, that's the end of that. There will NEVER be another war now."

The military planners were looking at another 8 years of combat in the Pacific and on the island of Japan to bring a conclusion to World War Two. When the second atomic bomb was dropped, Japan threw in the towel and quit.

With the rather sudden end of the war with Japan, that left stocks for the planned additional 8 years of warfare with no place to use it.

So there really was more "war surplus" stuff available at the end of World War Two.

Most of the equipment used in Europe was left behind or just thrown off of ships etc rather than bring it back. Or we would still be seeing equipment for sale.

By the time Vietnam was over, the military, having found themselves fighting an enemy that didn't have any problems using our own equipment, they decided "No, that's not gonna happen again" and the move towards "demilitarizing" equipment rather than just auctioning it off by the pallet, or disposing it like the last time around.

I thought that they where going to auction all that new found spectrum to the likes of Google and Sprint to be used for nationwide data/voice services. I don't recall if they where going to slice out any for other service types but here's hoping they do. Seems like a small slice dedicated to this kind of thing might be useful.

I can imagine that with all the hoopla between the primary spectrum user on 440 and the ham repeaters in the east and west that this might not fly with the FCC. Can you imagine the possible interference this might cause with the Air Force?

A quick Google search show several surplus outfits selling these things.

Having used them in the military, I can't imagine why a ham would
want one these days.

They are also overpriced in my opinion.

I'm interested in more detail about how different people see "the
Citizen's Band fiasco.

IMHO, what happened was that FCC created UHF CB in 1948, and it went
OK except that its popularity was limited. This was because, in those
days, the good UHF equipment cost too much and the inexpensive UHF
equipment had pretty dismal performance.

So in 1958, FCC created 27 MHz CB, with the idea that the
equipment would be simpler and less expensive, while still giving
adequate performance for the intended uses. And it worked - for a
while.

But what FCC never counted on was that large numbers of people would
buy CB sets and simply ignore the regulations for CB. FCC could not
begin to adequately enforce the rules once the CB culture had become
one of simply ignoring them.

How do others see it?

> It's really more simple than that actually. At the end of World
> War Two, every one thought, "Well, that's the end of that. There
> will NEVER be another war now."

Well, the WW2 veterans I have known didn't think that way. But that's
really a minor thing.

> The military planners were looking at another 8 years of combat
> in the Pacific and on the island of Japan to bring a conclusion
> to World War Two. When the second atomic bomb was
> dropped, Japan
> threw in the towel and quit.

Do you have a source for the 8 years figure? From what I have read,
and veterans' accounts, the invasion of Japan was expected to take a

year or so, with enormous casualties on both sides.

But as you said, the atomic bomb, plus continued conventional bombing and the near-blockade by USN submarines, made all that pretty academic.

One WW2 veteran I knew well, who was in 7th Air Force B-24s, had 13 missions to Japan when the war ended. It took 40 missions to get rotated home, and he said that even in mid-1945 the chances were 1 in 3 a B-24 crew would not survive 40 missions.

> With the rather sudden end of the war with Japan, that left stocks
> for the planned additional 8 years of warfare with no place to use
> it.

Agreed, whether it was for 1 year or 8 years. Plus a lot of stuff was being made for Lend-Lease.

> So there really was more "war surplus" stuff available at the end
> of World War Two.
>
> Most of the equipment used in Europe was left behind or just thrown
> off of ships etc rather than bring it back. Or we would still be
> seeing equipment for sale.

I don't know if that's really true. From the veterans I have known some stuff was left behind, of course, because occupation troops still needed some things. But after May 1945, usable stuff from the European and other theatres was shipped back to the US for use in the invasion of Japan.

When the war ended suddenly, there whole supply chain was full of stuff in all stages of completion.

Remember that while the war ended in 1945, we were still seeing WW2 surplus for sale 25+ *years* later.

> By the time Vietnam was over, the military, having found
> themselves

> move towards "demilitarizing" equipment rather than just
> auctioning
> it off by the pallet, or disposing it like the last time around.

Yep - but there's more to the story.

WW2 required enormous quantities of equipment, and American industry was almost totally dedicated to war production. For just one example, almost 20,000 B-24 bombers of various suffixes were produced in less than 5 years, which means 20,000 complete radio sets plus spares for them. And that's just one kind of airplane!

Korea, Vietnam and other conflicts were simply not on that scale.

In addition, much of the hardware produced for WW2 was essentially obsolete when the war ended. Piston-engine propeller fighter aircraft were already being replaced by the first-generation jets by 1945, for example. The use of HF for short-range radio was being replaced by VHF. Radar had gone through several generations during the war; in 1941 a 112 MHz radar was state-of-the-art, while in 1945 there were 10 GHz sets in mass production.

So there was a lot of old stuff in warehouses and in the supply chain to be disposed of.

Perhaps the biggest factor is simply this: A lot of WW2 surplus gear was easily adapted to ham use. A BC-342 receiver, for example, could be easily adapted for use in the ham shack. While it might not have been state-of-the-art even in 1946, it was a dern good ham rx for $50-70.

But later surplus, when we hams could get it, wasn't so easily used as ham gear. And it wasn't nearly so inexpensive.

That's an interesting comment....

How could an amateur radio advocacy organization be more effective? Unlike the NRA, there's no radio-equivalent to the Second Amendment.

As for the ARRL being "weak and ineffectual", note the recent court decision on FCC's actions wrt BPL. That required taking the FCC to court, which is a pretty bold and risky move. Or note how FCC ruled against those motorsports' use of 440 - ARRL had a big role in that.

Sure, ARRL doesn't always win, but neither does the NRA.

Most of all, I don't see the ARRL as "FCC's compliant and obsequious lapdog". Time after time, ARRL has opposed FCC on issues affecting amateur radio.

What would you have an advocacy group do differently, given the
limited number of US hams?

NOTE TO PREFEED LIST: Because Ill be away from Los Angeles next week attending the Dayton Hamvention, and because this list lives only on my PC there will be no "prefed" sent out dor newscast 1605. Please just assume it will be at the www.yhoty.org website at about this time on Friday, May 16 and download the text version there. The prefeeds will resume for newscast 1606 on May 23. -- ARNewsline

Amateur Radio Newsline" Report 1604 - May 9, 2008

Amateur Radio Newsline report number 1604 with a release date of Friday, May 9th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. First response planners say major disasters and communications tops their list of concerns. Also, seven new ham radio cubesats are in space, B-P-L appears dead in Dallas Texas and scouts get ready for Hamvention 2008. Find out how on Amateur Radio Newsline" report number 1604 coming your way right now.

RESCUE RADIO: SURVEY SAYS TECHNOLOGY PARAMOUNT TO PLANNERS AND FIRST RESPONDERS

First responders say that responding to a major disaster is their top worry and technology plays a key role in planning. Bill Pasternak, WA6ITF, has more:

--

The May issue of Popular Communications Magazine says that sixty five percent of 200 public safety officials and first responders cited the ability to respond to natural disasters as a top concern. This, in response to a nationwide survey conducted jointly by the Association of Public Safety Communications Officials and telecommunications manufacturer Motorola.

The survey revealed that in the area of interest in new technology, some 47 percent of those surveyed had interested in new satellite tracking technology. Another 41 percent said automatic license plate recognition was a paramount issue.

Regarding the area of communications, given a hypothetical funding increase for their departments, public safety officials seemed to agree that almost as much needed to be spent on communications technologies than on training of personnel. Communications improvements were only topped by the need for additional personnel.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, at the studio in Los Angeles.

--

The complete article is on page 8 of the May issue of Popular Communications magazine. (PopComm)

RADIO LAW: FCC REFUSES PETITION TO EXPAND 2 METER REPEATER SUBBANDS FOR DIGITAL OPERATIONS

I'm Burt Hicks, WB6MQV, with late breaking news. Dateline Washington D-C where the Federal Communications Commission on May 7th denied a petition filed by two California hams asking that an additional repeater subband be created on 2 meters. This, ostensibly to permit the introduction of digital voice repeaters in areas where no spectrum exists for them.

In the petition for Rule Making filed last October 10th, Ken D. Chafin, W6CPA, and Leon J. Brown, KC6JAR, Commission amend its rules to allow repeater stations to transmit in the 145.5 to145.8 MHz segment of the 2 meter amateur band. This, in addition to the 2 meter frequency segments currently authorized for repeater station operation. In their petition Chafin and Brown argued that additional spectrum is needed for repeater stations because some amateur repeater stations have begun using certain digital communication protocols, and "digital voice operation is incompatible with existing analog operations . This, because digital voice users are unable to determine if the desired frequency is in use by analog users and can inadvertently cause harmful interference to those users. The pair also argued that coordinating groups have been unable to separate analog and digital voice repeater operations to avoid harmful interference because the available repeater spectrum in the 2 meter band is fully occupied by existing analog users in most metropolitan areas."

After consideration of their request, the agency concluded that the Petition does not present grounds for the Commission to propose to amend its rules. That repeater stations are authorized to transmit on any frequency in the 2 meter band except the 144.0 to 144.5 MHz and 145.5 to146.0 MHz frequency segments. These two segments were excluded to minimize the possibility of harmful interference to other amateur service stations and operating activities, especially "weak signal" operations. The FCC says that allocating an additional three hundred kilohertz of the 2 meter band to repeater operation would not be consistent with that concern. Rather, it would likely result in increased interference to non-repeater stations.

Moreover, to the extent that the petition proposes a separate frequency segment for use by digital but not analog repeater stations, the FCC note that when the Commission has previously addressed the issue of interference between amateur stations engaging in different operating activities, it has declined to revise the rules to limit a frequency segment to one emission type in order to prevent interference to the operating activities of other amateur radio service licensees Rather, the Commission noted that interference between amateur stations is already addressed by Section 97.101(b) and (d) of the Commissions Rules. These require amateur licensees to cooperate in selecting transmitting channels and in making the most effective use of amateur frequencies, provide that no amateur frequency will be assigned for the exclusive use of any station allocated to the Amateur Radio Service, and prohibit operators from willfully or maliciously interfering with or causing interference to any radio communication or signal.

The bottom line. The FCC says no new repeater subband will be created to cater to the desires of digital voice operators. Rather, those wanting to use this or any other emerging modes will have to do so within the context of the existing Amateur Services rules. Rules that say repeaters, be they analog or digital have to stay in their own R-F back yards and operate in a way as to cause no interference to other users of bands where repeater and non repeater operations both exist. It also might be viewed as a kind of subliminal warning to coordinators who are considering putting digital voice repeaters in spectrum outside of established repeater subbands to reconsider and not make such a move. (FCC)

HAM RADIO IN SPACE: 7 NEW CUBESAT - HAMSATS ALL OK

The April 28th launch of 10 satellites aboard an Indian Space Research rocket put 7 amateur radio cubesats and 3 commercial scientific birds into space. Telemetry indicates that all solar panels and antennas have properly deployed. Other telemetry shows values for all on orbit housekeeping activities are normal. More on these birds is on line at the U-R-L in this weeks printed Newsline report.

An excellent source of information for each of these satellites can be found at: http://space.skyrocket.de/index_frame.htm (scroll down to the April 28 data). Also see Ralph W0RPK Cubesat Webpage at: http://showcase.netins.net/web/wallio/CubeSat.htm. (ANS)

THE BPL WAR: NEWSPAPER REPORTS "BPL PLAN IS DEAD IN DALLAS

Broadband Over Powerline or B-P-L appears to be a dead issue in Dallas, Texas.

The ARRL quotes a Dallas Morning News report that a plan for using power lines to deliver Internet service to 2 million area homes collapsed. This after Current Group, LLC announced plans to sell its Dallas B-P-L network for $90 million to Oncor.

Oncor is a regulated electric distribution and transmission business that reportedly has no plans to offer Internet service. Instead it will use the network to detect power distribution monitoring.

Current originally touted the network as a way to offer Internet service to its consumers and had entered into a marketing arrangement with DirecTV. DirecTV customers who get Internet service through Current's network will probably lose service when the deal goes through.

Dallas and Houston are the only metropolitan areas in Texas with BPL Internet access to customers homes. Austin had also considered the use of B-P-L but decided against it.

More is on-line at

BREAKING DX NEWS: MARKET REEF WILL BE ON IN JULY

Some breaking news in the world of D-X. Word has been released that six well known operators will activate Market Reef between from July 11th to the 14th . The expedition is time so that the operators will be able to take part in the I-A-R-U High Frequency World Championship event on July 12th and 13th.

The group says that it will have three stations on the air on 160 through 6 meters. All operators will use their home calls portable Oh J Zero before and after the IARU Contest, except for O-H-1-V-R who will use O-J-Zero-V-R. QSL each station to his or her home calls and O-J-Zero-V-R via OH1VR.

A special callsign for the contest has been applied for and is not yet known. We will have more DX news later on in this weeks Amateur Radio Newsline report. (OPDX)

**

RADIO LAW: COMPANY WANTS TO TRANSMIT DRM IN ALASKA

Digital Aurora Radio Technologies has applied to the FCC to use Short Wave Digital Radio Mondiale in Alaska. A report on the 26 MHz D-R-M site at www.26mhz.us say that the company has applied to the FCC for authorization to experiment with statewide DRM in the 5, 7 and 9 MHz shortwave bands. While no specific frequencies are mentioned the company says that its ultimate goal of this project is to provide a terrestrial digital radio service to the citizens of Alaska.

A unique element of the proposed station is its use of government surplus over-the-horizon radar transmitters for the project. Tests by the system manufacturer, Continental Electronics, demonstrated the capability of the transmitter to broadcast Digital Radio Mondiale with excellent performance characteristics and within the spectral mask recommended by the ITU for this mode

The FCC has assigned the callsign WE2XRH to this station, but its license was pending at the time of this writing. Digital Aurora Radio Technologies is home based in Delta Junction Alaska, approximately 130 miles southeast of Fairbanks. Digital Radio Mondiale or DRM is an open, non-proprietary digital standard for sound and data broadcasting, world-wide. (Southgate)

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the following bulletin station.

(5 sec pause here)

**

RESCUE RADIO: THE VOIP HURRICANE NET WANTS YOU

If you are skilled in emergency communications then the Voice over Internet Protocol or VoIP Hurricane Net wants you.

According to a press release the VoIP Net Management team is looking for operators from any geographic area to maintain a net for as long as emergency communications are required before, during and shortly after hurricanes. This could be up to 24 hours a day and sometimes for several days.

Net Control Operators from the Pacific, Asia, Australia, New Zealand and other international areas are also very essential. They play a critical role in assisting net operations during the overnight hours of a North American activation during their local daytime. This, by providing North American controllers a rest period during their normal overnight hours. Also needed are hams fluent Spanish in order to further support operations in South and Central America, Mexico and Puerto Rico.

The net management team will be offering control operator training in the coming weeks. If you're interested please contact Rob Macedo, KD1CY, who is the Director of Net Operations or Scheduler Jim Palmer, KB1KQW who is the nets weekly Activation Net Control. Both are good in the callbook or at QRZ.com.

The VoIP Hurricane Net was created in 2002. It serves as a support network providing services to WX4NHC. Thats the amateur radio station at the National Hurricane Center in Miami, Florida. (VOPI Net Release)

**

RESCUE RADIO: FCC WANTS CELL SITES TO HAVE EMERGENCY POWER

The government wants every cellular telephone tower in the country to have at least 8 hours of battery or other power backup at every one of the nations cellular tower and other receive and transmit sites, but it has not addressed how the cell phone infrastructure will be able to handle the millions of calls that might be expected during a man made or natural disaster. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

The FCC says that when Hurricane Katrina hit the Gulf Coast in 2005, wind and flooding knocked out power to hundreds of cell towers and cell sites. This says the regulator lead to the silencing of wireless communication exactly when emergency crews and victims needed it.

To avoid similar telecommunications collapse in the future, the Federal Communications Commission wants cellular transmitter sites in the U.S. to have at least eight hours of backup power in the event mains power fails. Several cellular service providers agree that their networks need to become more resilient to disaster, but they oppose the FCC's backup power regulations, claiming they were illegally drafted and would present a huge economic and bureaucratic burden.

A federal appeals court in Washington, D.C., has already placed put the new regulations on hold while it considers an appeal by some in the wireless industry. But the FCC is expected to fight hard to get its way. The agency says that the need for backup power at cell sites in the event of emergencies has been made abundantly clear by recent events, and the cost of failing to

have such power may be measured in lives lost.

There is one fallacy with the FCC argument. While battery power at cell sites might keep them operational unless the tower falls or the site is totally destroyed, it does not mean that very many calls would get through. The very nature of the cellular telephone infrastructure is rather fragile and was not developed to be a stand alone emergency communications system. Thats because its open for anyone, anywhere to use 24 hours a day.

What the FCC has yet to address is how to handle the call volume that would likely bring cellular service to a halt if an emergency like the agency is describing were to come to pass. An emergency where a decentralized two way radio system would likely be the only form of communications system to survive. An emergency communications system such as that provided free of charge by radio amateur across the United States and world wide.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

There are almost 210,000 cell towers and roof-mounted cell sites across the country and carriers have said many would require some modification. At least one industry estimate puts the price tag for an 8 hour back up power system at up to $15,000 each. (Published reports)

**

PUBLIC SERVICE: SOUTHWEST MISSOURI SKYWARN AT EMNERGENCY EXPO

Hams who are active in the Southwest Missouri SKYWARN network along with the National Weather Service, demonstrated what they do during the Family Preparedness Festival on Saturday, May 3rd at the Springfield Expo Center. The display was part of an emergency expo sponsored by Convoy of Hope and the Springfield, Missouri Chamber of Commerce.

The Southwest Missouri SKYWARN group handed out packets of information from the National Weather Service on severe weather spotting and safety . They also had a tornado simulator operational and screened videos of tornadoes and severe thunderstorms taken from the field.

Ham radios and other specialized equipment used in severe weather spotting was in full operation for public viewing. Information was available to anyone looking to become a ham radio operator and the needed training to participate in SKYWARN. (eHam)

**

PUBLIC SERVICE: NEW POLL - ARE THEY COMING OUR WAY

Bill Morine, N2COP, says that for the first time in several years, his local club in Williamgton, North Carolina, has been asked by two non-profit groups to provide communications for events. The first was the local air show where there were 10 hams helped to coordinate a crowd of 20,000. The second is an upcoming local YMCA group that will be hosting a 1,300 participant triathlon in November.

Accordong to Bill, in both cases, staff members said they had approached cellular service providers which had supplied phones to their events since the 1990s. The cell carriers said they didn't want to any longer donate phones or air time to the events

Bill says that if this trend is true, it can re-open public service opportunities and media exposure for amateur radio. He and we are curious if anyone else out there is witnessing the same thing. Please check the on-line polls area at www dot arnewsline dot org to respond. (N2COP, ARNewsline")

**

NAMES IN THE NEWS: 5TH ANNUAL ARMAD ON MAY 24

May is Military Appreciation Month and the fifth annual Amateur Radio Military Appreciation day -- better known as ARMAD -- will take place May 24th.

ARMAD is an award winning event and live forum involving Amateur Radio Operators from around the world to spread messages of support for our Military Veterans, and Active Duty Members.

A non-political Amateur Radio Project that has grown rapidly, ARMAD has received recognition and support from many local communities and national organizations.

ARMAD encourages our Amateur Radio Operators from our communities to gather at public venues such as shopping malls, parks, VA Hospitals and sporting events, to allow the public to express verbal positive support live over two way radio for members of the Military, Veterans, Reserves, National Guard, and Military Support Groups.

ARMAD has produced a public service spot suitable for airplay on any radio station. We've heard it and its great. For more information please visit www.armad.net. (armad)

**

NAMES IN THE NEWS: GW1FKY CALL IS IN SPACE

The Southgate News reports that Ken Eaton GW1FKY had always dreamed of one day flying in space. Now, thanks to the Technical University of Delft, GW1FKY is orbiting the earth. At least he is vicariously. The story goes like this.

When the team building the Delfi-C3 satellite, attended the AMSAT-UK International Space Colloquium they made a very generous offer to help boost AMSAT-UKs satellite building fund. They decided to allow one Amateur's callsign to fly in space onboard their satellite. This chance to have your call sign fly on the satellite was auctioned at the Annual AMSAT-UK Dinner and there was fierce bidding to win this privilege. Ken Eaton GW1FKY was the winner and his call sign was put into Delfi-C3 and has now been launched into Earth orbit. (Southgate)

**

HAMVENTION NEWS: DAYTON EXECUTIVE HOTEL CLOSES

Turning to Hamvention related news, word that the Dayton Executive Hotel, a 253-room hotel on Needmore Road, has closed. WHIO-TV reported Tuesday, April 29th that the hotel, that the hotel has 231 rooms, but it was only about 10 percent booked. Former employees told the station that mainly construction workers were their guests at the present time.

In relation to the Dayton Hamvention, the Dayton Executive Hotel was one of the closest to the Hara Arena. Located at the Needmore Road exit of Interstate 75, it was mainly frequented by smaller vendors and flea market sellers who wanted to stay as close to the Hara complex.

At airtime its unknown as to how many Hamventiuon goers, if any, will be affected by the Dayton Executive Hotel closure. (News reports)

**

THE SOCIAL SCENE: 350 ATTEND EMCOMMWEST IN RENO

Emcommwest, an ARRL Specialty Convention sported a record crowd of over 350 people this year in Reno, Nevada.

Keynote speaker, Dennis Dura, K2DCD Emergency Preparedness and Response Manager from the ARRL said that he was delighted with the convention and that he just may have to make this event one of his regular visiting sites.

Riley Hollingsworth, K4ZDH special council of the FCCs enforcement Bureau, who thanked amateur radio emergency communicators for their hard work with disasters and for assisting many served agencies. He said that amateurs should be commended for their work in support to their nation and local communities.

Mr. Ham Radio, Gordon West, WB6NOA came in from southern California, as a forum presenter and banquet speaker. His presentation kept the capacity crowd on their toes as he did one of his famous presentations, this time with a piece of smoking gear, allegedly purchased at the Saturday morning swap meet. This was one of the highlights of the weekend.

Emcommwest will be back next year May 1-3 once again in Reno. For pictures of the event, check the website at www dot emcommwest dot org. (Emcommwest)

**

HAM RADIO ON THE WEB: HOUSTON AMSAT NET ON ITUNES

The Houston AMSAT Net Podcast has now been picked up by iTunes. To subscribe, do a search on the iTunes site for "Houston AMSAT Net," "KK5DO" or "Bruce Paige." Any of those three search arguments should bring it up and you will then be offered the opportunity to subscribe to the Podcast. (ANS)

BREAK 2

This is ham radio news for todays radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: FORMER K7ANQ - AGE 99 - SK

99 year old former Alaska resident Lily Osterback Alford, the former K7ANQ,

died April 24th at home in Lake Stevens, Washingtron.

According to the Anchorage Daily News, it was in the 1930's that newspapers labeled Lily as the 'Queen of the North.' because she had the ability to communicate with people all over the world on the family's homemade transmitter and receiver.

According to family members Lily was half Aleut. Her greatest moment of fame came in the early 1930s as the only 'Indian Girl' in the United States to hold a ham radio license at that time.

A memorial celebration of the life of Lily Osterback Alford was held at the Bitterlake Community Center in Seattle, Washington. (Anchorage Daily News)

**

EMERGING TECHNOLOGY: INTERNET INTO THE JET BLUE

The Internet is taking to the sky and its using radio to do it. Jim Damron, N8TMW, has the details:

--

JetBlue Airways will be teaming up with Research in Motion and Yahoo to provide free e-mail and instant messaging on its flights. Network World says that this means that there are now at least four airlines with announced plans to experiment with in-flight broadband connectivity. Others involved in bringing passengers a similar service include American Airlines, Alaska Airlines and the newly formed Virgin America.

What does not seem to be on the table at this time is in-flight cellular telephone use. While many business people believe it would be advantageous to be able to conduct deals from on high, others in the general public say that they do not want to be annoyed by someone chatting away coast to coast as they try to grab a few hours of sleep. So for now it looks as if text messaging and maybe Internet browsing will be the first major step in bringing the Internet to the sky.

From Charleston West Virginia, I'm Jim Damron, N8TMW, reporting.

--

Look for more airlines to jump on board the inflight web access band-wagon before years end. (Science OnLine)

**

WORLDBEAT - ITALY: ITALIAN HAMS GET 4 METER BAND

Italy's Ministry of Communications has authorized Italian amateurs to use three spot frequencies on the 4 meter or 70 MHz band. All modes are permitted at a maximum of 25 watts effective radiated power on 70.100, 70.200 and 70.300MHz, plus or minus 25 kHz. This experimental allocation runs until December 31, 2008. Further information can be found at www.space.it/70MHz. (SouthgaTE)

**

WORLDBEAT - UK: RSGB COMPLETES MOVE TO NEW HQ

The Radio Society of Great Britain has completed its relocation to its new headquarters in Bedford and is fully operational. The Bedford office is purely administrative and will not be open to visitors.

A new visitors center, the RSGB Pavilion, will be set up at Bletchley Park. It will include the National Amateur Radio Library and Museum and the GB3RS shack. Bletchley Park is an estate located in the town of Bletchley, in Buckinghamshire. During World War II, it was the location of the United Kingdom's main Nazi axis code-breaking operation.

As to the RSGB move, for the time being, QSL Bureau cards should continue to be sent to PO Box 1773, Potters Bar, EN6 3DP. They are being automatically forwarded to the QSL handler. The new headquarters mailing address is 3 Abbey Court, Priory Business Park, Bedford, England, MK44 3WH. The phone number and all e-mail addresses remain the same. (rsgb)

**

WORLDBEAT - NEW ZEALAND: IARU REGION 3 TURNS 40

Region 3 of the International Amateur Radio Union is turning 40. The New Zealand Amateur Radio Transmitters bulletin says that this month marks the 40th anniversary of the formation of Region 3 which was formed in 1968 at its Inaugural meeting, held in conjunction with the 1968 Federal Convention of the Wireless Institute of Australia. In the city of Sidney

From outside Australia those present at this meeting included Harry Burton, ZL2APC, and Tom Clarkson, ZL2AZ, from New Zealand. Also present were Emilio Asisitores, DU1EA, of the Philippines, along with Kan Mizoguchi, JA1BK, and Kenichi Kajii, JA1FG, from Japan.

Attending representing the IARU world body was its then President Bob Denniston, W0DX. National societies represented at the inaugural congress were the JARL, NZART, PARS and the WIA. (NZART)

**

ON THE AIR: INTERNATIONAL MUSEUMS WEEKENDS FROM GREECE

Greece will be on the air for a pair of upcoming ham radio operating events. SV2CWV, SV2HRV, SV2KBB and SV2LBB will be active using the special callsign SX2MT during the 2008 International Museums Weekends from the Museum of Vergina in Hella, Greece.

The International Museums Weekend takes place on the weekends of June 14th and 15th and 21st to the 22nd. Activity by the Greek stations will be on all bands and using all modes. QSL via SV2KBB, direct only or electronically using eQsl (opdx)

**

DX

In D-X, word that members of the Ukrainian National Team will be active as

EM5HQ during the 2008 IARU HF Contest on July 12th and 13th. The QSL manager for this year event is UR5EAW. All QSLs will be sent via the QSL Bureau. Stations making 4 QSOs with the station EM5HQ will be sent a special certificate.

M0OXO and M0NJW will be active as MJ0X from Les Minquiers Islands during the R-S-G-B Islands On The Air Contest on July 26th and 27th. Outside of the contest, look for Charles to sign GB8LMI between July 23rd and the 29th. QSL via M3ZYZ.

JL3RDC will be active as NH0DX from the Marians Islands during the

CQ World Wide DX SSB Contest from October 25th to the 26th. This, as a Single-Operator, All-Band High-Band entry. QSL via JL3RDC direct only. No cards will be accepted via the bureau.

PA0IJM, will be active as SI9AM from the King Chulalongkorn Memorial Amateur Radio Societyin Sweden from late evening through May 15th. QSL via SM3CVM, by the bureau or direct to his Callbook address.

A7HMZ will make his usual regular May trip to Pohnpei and will once again be active as V63DX between May 19th and the 24th. He will operate on all band and modes including 6 meters. QSL via JA7HMZ.

Lastly, Ted Melinosky, K1BV, says that he has assumed QSL Manager duties for 4L8A. Ted is also the QSL Manager for D4B, D44TT and EY8MM. His address is 12 Wells Woods Road, Columbia, CT. 06237.

(Above from various DX news sources)

**

THAT FINAL ITEM: SCOUTS AT HAMVENTION 2008

And finally this week, if you see a lot of scouts in the halls And flea market of the 2008 Dayton Hamvention, it wont be an illusion. Thats because Scout Leaders will be reaching out to ham radio operators at Hamvention to encourage them to provide more amateur radio opportunities to scouts back in their home towns. Amateur Radio Newsline's own scout leader, Mark Abramovich, NT3V, is here with the details:

--

Bill Ragsdale, K6KN, is a district chairman for Yolo, in the Golden Empire Council in Woodland, California, just outside of Sacramento.

A ham since 1954, Bill came up with the idea of combining his two hobbies - Scouting and amateur radio into a presentation he'll give on Saturday, May 17 at 9 a.m. in Room 2 at Hamvention

"I put together a 45-minute program on the interaction between Scouting and ham radio," explains Ragsdale. "It's called 'Adventures with Elmer Baden Powell. It's a play on the concept of Elmer as a mentor and Baden Powell as the founder of the Scout movement."

Ragsdale, active on Scouting internet chat sites, has assembled a small staff of volunteers to help deliver a program that will offer lots of good ideas for hams willing to hook up with Scouts.

"We cover how to get involved with the Jamboree on the Air, how to use IRLP and Echo Link to establish worldwide communications and how to put on local events at that time period," Ragsdale says.

The bottom line, Ragsdale says, is it's easy to get involved.

"Scouts have events such as camporees, jamborees, jamborama that are outdoor events and we find that amateur radio is a natural fit for that," he says.

Ragsdale says he's also setting up a booth in one of the exhibit halls to encourage some networking between Scouts and hams.

"We anticipate we'll have 500 or 600 people come by the booth and our idea is to educate them and provide resources for them that they can take away with them," Ragsdale says.

And, there's one more thing the group will do.

Matt Murphy, KC8BEW, of the Muskingham Valley Council in Zanesville, Ohio, is behind an effort to get Boy Scout camps which have ham radio operating for the summer to register with a database he's calling SCOTA for Scout Camps on the Air.

"We'll kind of pattern it like some of the others, lighthouses for one, IOTA, something like that," Murphy says. "And, what we'll do is come up with a numbering system which, incidentally, has been provided to us by the Boy Scouts of America because every council has an assigned number."

Murphy says the idea has been gelling for less than a year. He says he's looking first to gather the data and then set up a general area on the web where it can be accessed.

"It started out about six, eight-months-ago," Murphy says. "Started coming up with the idea and started taking it from there. And, I'm hoping to get some contact with Boy Scouts at the national headquarters.

"My council, local council is helping out a little bit and kind of get the word out to begin that way."

You can learn more about this program by going to our website, A-R Newsline-dot-O-R-G, click on the script for this

week's show and scroll down to That Final Item where you'll find a website anchored by W6BSA and Ragsdale.

Visit http://YoloBSA.editme.com/Dayton for further information.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The 2008 Dayton Hamvention takes place May 16th, 17th and 18th at the Hara Arena. To name manufacturers will be there, The ARRL will have its expo there. Newsline will be hosting the Ham Radio Town Meeting on Saturday the 17th and we hope to see many of you there as well. (ARNewsline")

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline". Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's" only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline", P.O. Box 660937, Arcadia, California 91066.

A reminder that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year Award ends at midnight on May 30th. Nominations postmarked after that time or received electronically after that time will not be considered. A nominating form as a dot pdf file is available at our special Young Ham of the Year website at www.yhoty.org. Download it, fill it out and send it to us by U-S mail or electronically.

Again thats www.yhoty.org to nominate a young ham for this years Amateur Radio Newsline Young Ham of the Year. And as we said, the nomination cuttoff date is midnight on May 30th, 2008.

For now, with Bill Pasternak, WA6ITF, at the editors desk, Im Don Carlson, KQ6FM, saying 73 and we thank you for listening.

Amateur Radio Newsline" is Copyright 2008. All rights reserved.

The narrative does seem to fall flat when a so-called "compliant and obsequious lapdog" sues its master in Federal Court and scores at least a partial win.

Furthermore, there's other significant differences between the ARRL and the NRA that need to be considered when making suggestions about how to increase the League's effectiveness.

For one, the NRA is a 501(c)4 organization, whereas the ARRL is 501(c)3. Both are not-for-profit and exempt from federal tax (state laws vary). However, there are subtle, but important differences between each one, which are detailed at:

http://nonprofitmanagement.suite101.com/article.cfm/what_is_a_501c4_organization

Some of the high points are:

- 501(c)3 organizations can receive Federal grants. 501(c)4 organizations cannot.

- Donations to 501(c)3 organizations are tax-exempt. Donations to 501(c)4 organizations are not.

- 501(c)4 organizations can devote an unlimited time to lobbying, and can participate in political campaign activity, including supporting

> or opposing anyone running for public office. 501(c)3 organizations are strictly limited in their lobbying, and cannot support or oppose anyone running for public office.

So, to be as effective as the NRA in your mind, the ARRL would probably have to form a 501(c)4 organization, in addition to the existing 501(c)3 organization. The NRA does actually have both, with a 501(c)3 called the "NRA Foundation" which does charitable work consistent with the rules for that type of organization, and can benefit from tax-exempt donations and Federal grants, in exchange for separating off the lobbying and campaigning activities into the 501(c)4.

The NRA has over 4 million members. Even if the League was able to enjoy 100% membership among hams in the U.S., that would only be about 650,000. So for similar dues amounts (about $35 annual, $1,000 life), the NRA is able to raise far more money. Do you feel that the trade-offs in forming a 501(c)4 organization for lobbying and campaigning would be worthwhile despite the required increases in expenses, from loss of tax exemption and access to Federal grants, that would have to be spread out over a much smaller membership base? Could there even be a risk to the effectiveness of the League in the eyes of elected officials if they did form a 501(c)4 organization, and thus become "yet another" lobbying/campaigning group?

I think the Citizen's Band was a good idea, but at the worst possible time. As you point out, the FCC took 11 meters away from hams because commercial equipment was still using vacuum tubes, and they wanted CB to have inexpensive radios.

In retrospect, the cynic in me wonders if the commissioners were preassured by an industry that could see the sunset coming for vacuum tubes, and which wanted to clear the shelves before it got stuck with millions of 12BY7's. No matter: whatever the reason for the decision, it worked surprisingly well for about ten years, and then went downhill quickly when invaded by yahoos of all types.

What started the decline is open to question, although the sunspots cycle certainly played a role (1): in the end the small businesses who employed the Citizen's Band as it was intended to be used, and the people who used CB because they wanted to imitate hams, were both overwhelmed by foul-mouthed trailer-trash who sought out CB as a pipeline into a captive audience whom could be forced to listen to their delusions of grandeur. In the end we all learned anew that a few rotten apples really _do_ spoil the barrel.

Which brings us to the question of why the FCC got burned: a psychologist would say that it was compensation for Vietnam and the civil unrest of the 60's. The FCC was so roundly criticized for CB's decline because the government minions in other bureaus, who had found out the hard way that a million people really _can't_ be wrong, wasted no time blaming the FCC for not getting on the new bandwagon.

After all, the FCC was the most staid of federal bureaus, responsible for issuing licenses to, and assessing fines on, a public thoroughly cowed by the 50's Duck-and-cover drills and McCarthyism: between mild-mannered ham operators and cautious broadcasters and conservative business-band licensees, it simply wasn't in the commission's world-view to imagine radio users who wouldn't follow the rules.

When the Citizen's Band went from a well-intentioned "service" to an uncontrollable nightmare in less than two years, the commission had to take abuse from everyone else in and out of the government who were still smarting from _their_ earlier revelations that they could predict or control the actions neither of the ungrateful whelps who had picked up placards and told a nation of their elders to shove the American Dream, nor of the froggy little native boys who had picked up AK-47's and said "No, Daddy Warbucks, you *won't* do that here".

73, W1AC

(1) There were other factors, as well: the FCC never counted on "Smokey and the Bandit" and other films, which were rushed into theaters to take advantage of the CB craze, and in the process helped to spread it. The first "Bandit" was produced so quickly that the actors didn't even learn how to use two-way radios, with the result that Jackie Gleason was always talking into a CB microphone without pushing the PTT button: industry spin control quickly spread the word that the car was equipped with a "floor switch", and _that_ bit of B.S. resulted in third-party add-on floor switches being quickly rushed onto shelves for sale to Bufford T. Justice wannabees.

IANALB, I was told that the Supreme Court decided a long time ago that the Second Amendment does _not_ give citizens a right to bear arms unless they are part of a well-regulated militia. I presume the militia is the National Guard, but I'd like to hear from the attorneys who read this group.

I remember participating in the last 11m contest to
save the band for hams - don't remember the year.
Wonder what would happen if the FCC re-opened the 11m
band to amateur radio operators as a shared band under
conditions similar to 60m operation?

I'd welcome the chance to find out: I think it would influence a lot of CB operators to copy the practices used not only by hams, but also by "outband" CB'ers, who run SSB above 27.455 MHz, use "Q" signals, and sound more like the ideal ham than many hams.

Outband is a place where a newcomer who is used to a "Children's Band" mode of operation is quickly told to "Lose the echo", "Back off the power", and "Wait your turn". Some of the outbanders are more courteous operators than hams, and allowing amateurs operators to interact with them would be a good way to influence CBers' choices and encourage them to join the amateur ranks.

==> LEAVING ON A JET PLANE TO DAYTON HAMVENTION

"As the song says, 'All our bags are packed and we're ready to go' -- well, almost," said ARRL Hamvention Coordinator Katie Breen, W1KRB. "The ARRL EXPO area <http://www.arrl.org/expo> is packed up into seven shipping skids and they are in a truck on their way to Dayton. We here at headquarters are not only breathing a huge sigh of relief, but many of us are still wrapping up our individual final details." The Dayton Hamvention will run from May 16-18 at Hara Arena, just outside Dayton, Ohio <http://www.hamvention.org>.

Breen said that all around the Newington offices, ARRL staffers are putting the last-minute touches on their Dayton preparations: "Frankie Perez, KB1NQR, is finishing up his schedule for checking cards at the DXCC area. By late Saturday afternoon at Hamvention, there will be an area set up by the card checking just for DX Talk. We've named it the DXCC Discussion Zone."

Also new this year is the "Doctor Is IN" booth. This area, Breen said, is all about and just for technology enthusiasts: "QEX Editor Larry Wolfgang, WR1B, has been putting his creative genius to work and coming up with some great plans for that booth! ARRL Circulation Manager Amy Hurtado, KB1NXO, is finalizing details on what will be available in the bookstore and membership area. And me? Well, since this is my first year of coordinating the EXPO, I think I'm just worrying about everyone else at this point!"

Breen said that one thing she is really excited about with this year's EXPO is that the ARRL will host a larger number of volunteers from around the country: "Some of our newer Section Managers, some as far away as Northern California and Florida will be there. ARRL President Joel Harrison, W5ZN, will be attending forums, meeting and greeting members and generally sharing the good stories of all that is happening here at the League. We're also going to have an international presence with the IARU; we are pleased to welcome IARU President Larry Price, W4RA, and IARU Vice President Tim Ellam, VE6SH."

"Amateur Radio is all about the people," Breen remarked. "Without people on the air in various modes, what would Amateur Radio be? Without hams invested in Public Service, what would Amateur Radio be? Without people in their communities volunteering their time, what would Amateur Radio be? I think the Dayton Amateur Radio Association (DARA) hit the nail on the head with this year's theme of 'People + Radio = Fellowship.' When it all comes down to it, we are communicating with each other, regardless of the mode being used. What better opportunity to come together and communicate than at Hamvention, the country's largest gathering of radio enthusiasts?"

==> LOOK FOR THE JUNE ISSUE OF QST IN YOUR MAILBOX

The June issue of QST, our annual Field Day issue, is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

Ride the waves this Field Day with the ARRL Field Day Cookbook, an eight page insert located near the center of the magazine. Learn how to succeed in Field Day by really, really trying. Did you know that bonus points are available when you conduct an educational activity at your Field Day site? Learn how to collect these bonus points and have fun at the same time. Once again, we have some delectable recipes to tempt your palate as you're making those contacts. Along with some tips to make your Field Day a memorable one, we have included a chart of the US Amateur Radio bands. The 2008 ARRL Field Day is June 28-29.

John Stanley, K4ERO, discusses how looking at signals can improve our ability to listen to them in the first of his two-part article "The Beauty of Spectrum Analysis -- Part 1." Kirk Kleinschmidt, NT0Z, takes a look at modern, portable power generators. Rick Littlefield, K1BQT, takes a practical approach for achieving excellent multi-band performance in his article "A No Compromise Off-Center Fed Dipole for Four Bands." And don't forget Kids Day on June 21.

June is a great month for radiosport, with both the ARRL June VHF QSO Party and Field Day. While Field Day is more of an operating event than a contest, it is modeled after a contest in that points are earned for making contacts. ARRL Contest Branch Manager Sean Kutzko, KX9X, takes a look at these two events and gives his hints and helps for working this VHF contest that runs the weekend of June 14-15. The results of the 2007 ARRL 160 Meter Contest and the 2007 ARRL November Phone Sweepstakes are in. Did you top your score from last year? How did your closest rival do? Also, find out about upcoming contests in Contest Corral.

QST Product Review Editor Mark Wilson, K1RO, reviews Tokyo Hy-Power's HL-1.2KFX linear amplifier. According to Wilson, "This amplifier is a compact, easy-to-use 750 W solid state power amplifier for 160 through 10 meters. Its size, weight and flexible ac power requirements make it a good candidate for portable, as well as home station operation." Check out the reviews on the M-Cubed Electronix digital LCRZ meter kit and LDG Electronics RCA-14 transceiver accessory port breakout box, also in the June issue.

Of course, there are the usual columns you know and love in the June QST: Hints & Kinks, The Doctor Is IN, How's DX, Old Radio, Hamspeak and more. This month also features Amateur Radio World, the Emergency Communications Course Honor Roll and the ARRL VEC Volunteer Examiner Honor Roll. Look for your June issue of QST in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> FCC DENIES TWO AMATEUR RADIO PETITIONS FOR RULEMAKING

On May 7, the FCC denied two separate Petitions for Rule Making (PRM) dealing with digital issues.

Mark Miller, N5RFX, of Arlington, Texas, sought to delete the FCC's 2006 addition to how it defines data, amend the rules to prohibit automatically controlled stations from transmitting on frequency segments other than those specified in Section 97.221(b), and replace the symbol rate limits in Section 97.307(f) with bandwidth limitations.

The FCC denied all three parts of Miller's PRM, saying he "did not set forth sufficient reasons for the Commission" to approve his petition and that "should future experience substantiate Miller's concerns, he may file a new, factually supported petition for rulemaking." The complete copy of the FCC's reply to Miller is on the FCC Web site <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-1082A1.pdf>.

Ken Chafin, W6CPA, of La Crescenta, California, and Leon Brown, KC6JAR, of Los Angeles, California, also filed a PRM concerning additional spectrum for more repeaters, including digital systems, requesting that the FCC "propose to expand the frequencies on which an amateur station operating as a repeater (repeater station) may operate."

Chafin and Brown argued that additional spectrum is needed for repeater stations because some amateur repeater stations have begun using digital communications protocols" and "digital voice operation is incompatible with existing analog operations [because d]igital voice users are unable to determine if the desired frequency is in use by analog users and can inadvertently cause harmful interference to those users." The men pointed out that coordinating groups have been unable to separate analog and digital voice repeater operations to avoid harmful interference because the available repeater spectrum in the 2 meter band is "fully occupied by existing analog users in most metropolitan areas."

The FCC, after considering Chafin and Brown's PRM, concluded that the PRM did not present grounds for the Commission to amend its rules: "Repeater stations are authorized to transmit on any frequency in the 2 meter band except the 144.0-144.5 MHz and 145.5-146.0 MHz frequency segments. These two segments were excluded to minimize the possibility of harmful interference to other amateur service stations and operating activities, including 'weak signal' operations. Allocating an additional three hundred kilohertz of the 2 meter band to repeater operation would not be consistent with that concern. Rather, it would likely result in increased interference to non-repeater stations." The complete copy of the FCC's reply to Chafin and Brown is on the FCC Web site <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-1083A1.pdf>.

==> VETERAN WIRELESS OPERATORS ASSOCIATION HONORS TWO HAMS

At their annual awards banquet on April 26 in New York City, the Veteran Wireless Operators Association (VWOA) <http://www.vwoa.org> honored two Amateur Radio operators with two of the association's top awards: Fritz Raab, W1FR, and John "Jack" Curtis, K6KU. Raab gave the keynote address at the banquet. "The dinner speech was a wonderful presentation of the Amateur Radio Experiment domestically and that which is happening internationally. He explored what may happen, if things go well for the museum stations on 500 kHz and for radio amateurs," said VWOA Chairman Francis Cassidy. "Ever since the emergence of the Global Marine Distress and Safety System, professional radio officers have discussed the prior use of 500 kHz. They know the attributes in the oceans of the world where ground wave transmissions on the oceans provided their primary informational experience of these transmissions."

Fritz Raab, W1FR, of Burlington, Vermont, received the VWOA's De Forest Audion Gold Medal, honoring his "technical achievements in 35 years of radio engineering." Raab serves as the experimental project manager for The 500 KC Experimental Group for Amateur Radio <http://www.500kc.com>. The ARRL 500 kHz experimental license, WD2XSH, was issued in September 2006 and has 20 active stations.

"I'm kind of excited to see how we can apply modern technology to a 'classic part' of the radio spectrum," Raab told ARRL in 2006 when the experimental license was issued. He pointed out that 500 kHz -- the traditional maritime emergency frequency -- is roughly geometrically halfway between the 136 kHz experimental band and the 160 meter amateur allocation. "In contrast to 160 meters, 500 kHz is low enough to offer good ground wave propagation," Raab said, "but in contrast to 137 kHz, it is high enough to allow us to engage in real communication with realistic equipment."

Raab said he would eventually like to see at least a secondary 600 meter amateur allocation from 495 to 510 kHz. "Besides the opportunities for experimenting at low frequencies, that frequency is well suited to regional groundwave communication," Raab said. He said he envisions the eventual use of the spectrum to provide Amateur Radio emergency communication via groundwave, without having to deal with the vagaries of the ionosphere or causing interference to any other services.

Additional information on the 500 KC Experimental Group for Amateur Radio can be found at the experiment's Web site and also in the July/August 2007 issue of QEX <http://www.arrl.org/qex/2007/07/raab.pdf>.

Raab said that it was "a real honor for me to receive an award named after one of the most important inventions in radio, and given by an organization whose members have included a number of the legends in the field. As a newcomer to 500 kHz through our experimental license, it is especially nice to be recognized by a group of people who have actually used 500 kHz for communication."

Raab is chief engineer and owner of Green Mountain Radio Research, a consulting firm that he founded in 1980. He received his BS, MS and PhD in electrical engineering from Iowa State University. Raab is co-author of "Solid State Radio Engineering" and author of more than 100 technical papers; he has been issued 12 patents. Raab's professional activities include RF power amplifiers, radio transmitters and radio-communication/navigation systems. He is a fellow of IEEE and a member of ARRL, Sigma Xi, Association of Old Crows, Armed Forces

Communications and Electronics Association and the Radio Club of America.

Jack Curtis, K6KU, of Granite Bay, California, received the VWOA's Marconi Memorial Award Plaque "for his lifetime efforts of perfecting electronic circuits to generate Morse code as exemplified by the development of the Curtis Keyers."

In an article Brad Mitchell, N8YG, wrote for the ARRL Web site in 2002 <http://www.arrl.org/news/features/2002/02/042/>, he said, "Modern transceivers incorporate many features that not long ago were considered accessories: CW keyers and SWR meters come to mind. John Curtis, K6KU, created an electronic iambic-keyer circuit and subsequently offered an IC chip to do the job. He revolutionized keying, as we know it."

Mitchell wrote that Curtis, when studying for his Amateur Extra ticket, "decided to get a feel for the requirements of the Extra Class test by undertaking a circuit design project. John built a keyer circuit and learned about digital electronics." This keyer worked so well that Curtis's ham friends told him he should market it. Curtis followed the advice, and in 1969, he placed an ad in "Ham Radio Magazine" announcing the Curtis Electronic Devices EK-38. The -38 and its follow-up, the -39, became so successful that Curtis quit his day job and formed Curtis Electro Devices.

Curtis had established a lot of contacts while working at a semiconductor manufacturing company in the 1960s. These paid off for him when he decided that a keyer circuit could be implemented on a chip. He started with two designs: The 8043 and the 8044. "The 8043 was designed as a completely custom integrated circuit in CMOS," Mitchell wrote. "At the same time, International Microcircuits was looking for a chip in which to test their gate array technology. The first chip down the line was the 8044, produced for Curtis. The 8043 worked first try. It was limited to dit memory, and sold for $7.95 in quantities of 50 or more in 1973. The 8044 also worked right off the bat. It offered dah memory in addition and sold for $24.95 in 1975. The 8044M was introduced in 1980. M stood for meter. A meter could be hooked up to a pin of the 8044M to indicate sending speed."

In 1981 Curtis added mode B keying characteristics to his keyers. Mode B simply added an extra dit or dah when the operator stopped sending, depending on which was sent last. If a dit was sent last, an extra dah would be sent. If a dah were sent last, a dit followed. Curtis added this feature to his 8044B. He introduced several keyers incorporating his new full-featured ICs. The first was the EK430 incorporating the 8043 chip. Curtis also introduced a fully integrated keyboard chip called the 8045. In June 1982, Curtis Electro Devices produced its last keyer, the Lil' Bugger. Offered as the K5 or K5B, it incorporated the 8044 or the 8044B chip, respectively. Both models sold for $39.95 and were quite popular.

In spring of 1986, Curtis introduced the 8044ABM chip. It incorporated selectable A or B modes and the speed meter, becoming an industry standard. In the 1980s, however, microcontrollers were making serious headway and Curtis chips were no longer in demand. MFJ took over part of the line and Curtis Electro Devices ceased operations in April 2000.

The Veteran Wireless Operators Association was founded in 1925 to foster fellowship among wireless operators aboard ship, in the military, and in the shore stations. Through the years, the ranks of the VWOA have included most of the executives and innovators of the broadcasting and communication industry, as well as thousands of radio operators.

Today, in its 83rd year, the VWOA serves as both a link to the history or radio, as well as a bridge to the future. Its members have been, and continue to be, on the front lines of the development of radio and television broadcasting, satellite communications, and the entire digital revolution. Current membership is approximately 300 men and women. Members are concentrated along both US coasts, but members also reside in almost every state as well as Canada and several other countries. For more information on the VWOA, please visit the VWOA Web site <http://www.vwoa.org>.

==> NEW NASA TOOL ALLOWS EXPLORATION OF IONOSPHERE FROM INSIDE

Last week at the Space Weather Workshop in Boulder, Colorado, NASA released a 4D live model of the Earth's ionosphere <http://science.nasa.gov/headlines/y2008/30apr_4dionosphere.htm?list212589>. Without leaving home, anyone can fly through the layer of ionized gas that encircles Earth at the edge of space itself. All that is required is an Internet connection and a free copy of Google Earth <http://earth.google.com/>. NASA calls the ionosphere the "last wisp of Earth's atmosphere that astronauts leave behind when they enter space. The realm of the ionosphere stretches from 50 to 500 miles above Earth's surface where the atmosphere thins to near-vacuum and exposes itself to the fury of the sun. Solar ultraviolet radiation breaks apart molecules and atoms creating a globe-straddling haze of electrons and ions."

Using a Google Earth interface, users can fly above, around and through these regions getting a true 4D view of the situation. "The fourth dimension is time. This is a real-time system updated every 10 minutes," said W. Kent Tobiska, president of Space Environment Technologies and chief scientist of its Space Weather Division. The proper name of the system is CAPS, short for Communication Alert and Prediction System. Earth-orbiting satellites feed the system up-to-the-minute information on solar activity; the measurements are then converted to electron densities by physics-based computer codes. It is important to note, Tobiska said on the NASA Web site, that CAPS reveals the ionosphere not only as it is now, but also as it is going to be the near future.

According to propagation specialist Carl Luetzelschwab, K9LA, this model "can provide Amateur Radio operators a broad view of what the ionosphere is doing 'now.' This broad view is due to the fact that the resolution in the color coding schemes only gives coarse estimates of the six parameters available." Luetzelschwab, former editor of "National Contest Journal" (NCJ) <http://www.arrl.org/ncj/>, writes a propagation column in NCJ and other publications.

"This is an exciting development," said NASA solar physicist Lika Guhathakurta on the NASA Web site. "The ionosphere is important to pilots, ham radio operators, earth scientists and even soldiers. Using this new 4D tool, they can monitor and study the ionosphere as if they're actually inside it." Guhathakurta made his comments on the NASA Web site.

NASA understands that "[h]am radio operators know the ionosphere well. They can communicate over the horizon by bouncing their signals off of the ionosphere -- or communicate not at all when a solar flare blasts the ionosphere with X-rays and triggers a radio blackout." As radio amateurs, we use -- and depend on -- the ionosphere to make contacts.

Tobiska agrees: "For ham radio operators, this is a great application because it enables them to figure out what frequencies that are going to be available for communicating with any part of the world they want to communicate with at that moment in time. So ham radio operators who are in South Carolina want to talk to someone in Europe or Africa, they can know exactly what frequencies to turn to on their dial."

Luetzelschwab said he personally believes that "The importance of this new product is the fact that this is likely the first physical model of the ionosphere available to the widespread Amateur Radio community. This is in contrast to the model in our current propagation predictions -- such as VOACAP, W6ELProp and the like -- that is based on years of measured ionospheric data correlated to a proxy for the true solar ionizing radiation (the proxies being sunspots and 10.7 cm solar flux)."

NASA explained that it appears that this new physical model takes satellite measurements of solar radiation at extreme ultraviolet (EUV) wavelengths (the true ionizing radiation) and inputs this data, along with a geomagnetic field activity index, into a model of the atmosphere to determine electron densities. Luetzelschwab said "Yes, it only offers a broad view now -- but I think it is a sign of things to come."

More information on this tool for radio amateurs can be found on the ARRL Web site <http://www.arrl.org/news/stories/2008/05/06/10081/>.

==> ANNUAL ARMED FORCES DAY CROSSBAND TEST TO BE CONDUCTED MAY 10

The Army, Air Force, Navy, Marine Corps and Coast Guard are co-sponsoring the annual Military/Amateur Radio Crossband Communications Test in celebration of the 58th anniversary of Armed Forces Day (AFD). Although the actual Armed Forces Day is celebrated on the third Saturday in May -- May 17 in 2008 -- the AFD Military/Amateur Crossband Communications Test will be conducted on May 10 to prevent conflict with the Dayton Hamvention(r), scheduled for May 16-18.

The annual celebration features traditional military to amateur crossband communications SSB voice tests and copying the Secretary of Defense message via digital modes. These tests give Amateur Radio operators and short wave listeners an opportunity to demonstrate their individual technical skills and to receive recognition from the Secretary of Defense and/or the appropriate military radio station for their proven expertise. QSL cards will be provided to those stations making contact with the military stations. Special commemorative certificates will be awarded to anyone who receives and copies the digital Armed Forces Day message from the Secretary of Defense.

Military-to-Amateur crossband operations will take place on the dates and time in UTC on the frequencies listed for each station on the Army MARS Web site. Voice contacts will include operations in single sideband voice (SSB). Some stations, depending on propagation and manning, may not operate the entire period. Participating military stations will transmit on selected Military MARS frequencies and listen for Amateur Radio stations in the Amateur bands. The military station operator will announce the specific amateur band frequency being monitored. Duration of each voice contact should be limited to 1-2 minutes.

The newly updated list of schedules and frequencies <http://www.netcom.army.mil/MARS/docs/ARMEDFORCESDAYFinal.pdf> of participating military stations is published on the Army MARS Web site <http://www.netcom.army.mil/MARS/>.

==>SOLAR UPDATE

Tad "Ne'er shall the Sun arise on such another" Cook, K7RA, this week reports: Again this week, we saw a new, but brief sunspot, sunspot 993. Judging from the polarity of the spot, it looks to be from new Solar Cycle 24; this spot was south of the solar equator, so it has the same polarity as any Cycle 23 spot that was north of the equator. After two days it was gone, not from drifting over the edge of the visible solar disk -- it just disappeared. Geomagnetic indices were mostly quiet this week, except for some only slightly unsettled planetary A index numbers for May 2-3. The next active geomagnetic period is expected May 20, with a planetary A index of 25. For May 9-15, the predicted planetary A index is 8, 5, 5, 5, 12, 8 and 5. Sunspot numbers for May 1-7 were 0, 0, 0, 13, 15, 0 and 0 with a mean of 4. The 10.7 cm flux was 68.5, 68.1, 67.3, 68.3, 67.6, 67.2 and 66.5 with a mean of 67.6. Estimated planetary A indices were 9, 12, 12, 8, 11, 10 and 4 with a mean of 9.4. Estimated mid-latitude A indices were 6, 7, 9, 6, 8, 9 and 5, with a mean of 7.1. For May 9-15, Geophysical Institute Prague predicts quiet conditions May 9, quiet to unsettled May 10, unsettled May 11-13, quiet to unsettled May 14 and quiet again on May 15. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint Ladder is May

9 and the Nevada Mustang Roundup is May 9-10. The VK/Trans-Tasman 80 Meter Contest (Phone) and the FISTS Spring Sprint are both on May 10. Be sure to check out the SBMS 2 GHz and Up WW Club Contest, the EUCW Fraternizing CW QSO Party, the CQ-M International DX Contest, the VOLTA WW RTTY Contest and the 50 MHz Spring Sprint on May 10-11. The SKCC Weekend Sprintathon is on May 11 and the RSGB 80 Meter Club Championship (Data) is on May 14. Next weekend, look for another running of the NCCC Sprint Ladder on May 16. The Feld Hell Sprint is May 17. On May 17-18, be sure to make room in your schedule for the EU PSK DX Contest, His Majesty King of Spain Contest (CW), the Manchester Mineira All America CW Contest and the Baltic Contest. The Run for the Bacon QRP Contest is on May 19 and the NAQCC Straight Key/Bug Sprint is on May 22. All dates listed are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 25, 2008, for these online course sessions beginning on Friday, June 6, 2008: Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News on May 16: There will be no ARRL Audio News on Friday, May 16. The ARRL Letter will be released on that day. ARRL Audio News will return on Friday, May 23.

* ARRL to Blog from Dayton Hamvention: As in previous years, the ARRL will be blogging live <http://www.arrl.org/blog/Dayton%20and%20ARRL%20Expo> from Hara Arena, site of the Dayton Hamvention <http://www.hamvention.org>. In addition to keeping everyone up with the latest and greatest at Dayton, this year's blog will feature video clips. QST Editor -- and Hamvention blogger extraordinaire -- Steve Ford, WB8IMY, said, "The video clips were such a big hit with last year's blog that we decided to do even more of them for this year!" Ford says he plans on featuring new products that are debuting at the Hamvention, as well as all the "fun

stuff" that pops up: "Both I and the staff have a lot of fun with this, and we hope those who read the blog do, too." Look for the blog to go "live" Thursday, May 15 and continue throughout the Hamvention.

* Jim Oberhofer, KN6PE, Wins April QST Cover Plaque Award: The winner of the QST Cover Plaque Award for April is Jim Oberhofer, KN6PE, for his article "Outpost: Packet Radio for Emergency Messaging." Congratulations, Jim! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the May issue by Saturday, May 31.

* History Channel Show to Feature Nikola Tesla: Modern Marvels, a series on The History Channel, will feature electricity pioneer Nikola Tesla in an episode scheduled to air May 14 <http://www.history.com/shows.do?action=detail&episodeId=295798>. Helping out with the program was Bob "Loby" Lobenstein, WA2AXZ; Lobenstein is General Superintendent, Power Operations for New York City's subway system. "We did 8 hours of taping interviews at my 1904 power substation," Lobenstein said. "In addition to the action scenes of me throwing the 100 year old switches and demonstrating the use of power, I did a 'Mr Wizard' talk, showing the various things that 'Mr T' envisioned and invented. Of course, radio had a part and I just had to put the D-104 mic with our club's K2IRT shield into view!" According to The History Channel, Tesla's "...bizarre vision of the future brought him failure, but his genius electrified the world. Travel to Niagara Falls, where in 1893, Tesla installed his new system of Alternating Electrical Current known as AC -- the same power we use today. Uncover the forgotten ruins of Tesla's dream experiment -- a huge tower on Long Island Sound he hoped would wirelessly power the world. Radar, death rays, invisibility devices and earthquake machines: Tesla claimed to have created them all. More than 100 years ago Tesla foresaw the need for alternative energies like geothermal and solar." Check the The History Channel Web site for show times <http://www.history.com/>.

* Colorado Group Receives D-STAR Equipment: The Colorado Council of Amateur Radio Clubs (CCARC) recently teamed up with Ham Radio Outlet (HRO) in Denver to donate a 2 meter, 70 cm and 23 cm D-STAR system stack. According to ARRL Colorado Section Manager and CCARC Board Member Jeff Ryan, K0RM, the two groups hit upon the idea of issuing a Request for Proposal (RFP) to Colorado radio amateurs. "We received three excellent proposals," Ryan said, "and on March 21, CCARC and HRO awarded the D-STAR system to the Colorado D-STAR Association, a consortium of Denver area individuals, clubs and ARES groups." Ryan explained that the goal of the CCARC, which also serves as Colorado's frequency coordination body, was "to spur the interest and use of digital Amateur Radio technology. This is the first D-STAR system that will go on the air in Colorado. The hope is that it is the first of many such systems, ultimately linking the entire Amateur Radio community throughout Colorado and beyond." The 3-band D-STAR system, serving the Denver Metro area and the Front Range of Colorado from Ft Collins to Castle Rock and points east, will be installed this summer at a mountaintop site. The

system will have a coverage area of more than 5400 square miles, nearly the size of Connecticut. Ryan said that the RFP placed "special emphasis" on the D-STAR systems being available to ARES groups in the served area, "and also requires the host group to link to any other requesting D-STAR system that comes on the air in Colorado."

===

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

That's a decent Readers' Digest version of what happened. Part of the problem was a turf war between two Bureaus - the one that issued the licenses and levied the penalties, and the one (that I was in) that did the grunt work of finding and citing the offenders. Throw into that mix the one-and-only attorney in the latter bureau, someone who didn't believe in doing anything that took work (I had many run-ins with her), and a Congress that was short-changing the agency in the number of field personnel authorized because "we weren't supposed to be in the surveillance business" according to a specific congressional committee chair echoing the "man behind the curtain", one JEdgar Hoover, who was dead set against anyone doing law enforcement investigative work except his hand-picked crew at the FBI that he could control with an iron hand.

The ham community fared a little better, because many if not most of the managers who had any responsibility for the ARS and even some of the Bureau Chiefs at the agency were well-known and well-respected (feared ?) hams and they tried really hard to get the ARS to keep its skirts clean. Eventually, though, these fine folks retired or died and the nickel-nursers and "bright young folks" who succeeded them fell into the pattern exemplified by one of my favorite phrases from the biblical Book of Exodus "There arose in Egypt a new Pharaoh who knew not Joseph...." I can count the number of active and experienced hams who are decision-makers about the ARS on the fingers of one hand now.

My personal opinion.

Bill;

The only SCOTUS ruling on the 2nd amendment concerned the possession of
a sawed off shotgun. It is currently considering the Washington DC law
on possession of hand guns by non law enforcement individuals.

Also the Constitution of the United States provides for the militia in
the first part of the text. Look it up....

The term CITIZEN is mentioned four (4) times in the Bill of Rights. In
three cases the liberal interpretations means you and me. The fourth
mention is in the 2nd amendment. Here liberals want it to mean the
government. What is your opinion?

That's rather naive. Think: 'good cop, bad cop.' To the general public, filing a lawsuit is a really big deal. To a government agency, as much government business is dictated by court decisions as by routine administrative work. There are a number of actions that a government agency can take to delay a court case and to run up the expenses of a plaintiff. It would be very telling if it turned out that the FCC attempted none of those maneuvers and allowed the case to go right to court.

I know the 501(c)* series well, having been involved in numerous non-profit groups and having been the treasurer of several. A non-profit organization can easily become a "group" of non-profit organizations by filing some forms and opening some extra checking accounts. The marginal cost of adding another type of organization is vanishingly small. I've been there, I've done that and it's not an issue.

The NRA spends a great deal on advertising and communications. I would expect a group of hams to be able to keep in touch for much less, mainly via the Internet (I doubt that an expensive, glossy magazine would be necessary and the NRA has TWO of them).

The NRA lobbies the Federal government, all fifty state governments and any municipalities that can or might pass gun-related ordinances. A ham radio lobby would only need to lobby the Federal government. Only one office would be needed.

Elected officials cannot pick and choose who will lobby them. They must deal with whatever groups we the people choose to fund and send to Washington. "Credibility" comes from votes and money, not from sucking up to Beltway insiders.

Then there'll be only little credibility. Even if all of the roughly 700,000 radio amateurs in the U.S. belong to such an organization, that number--spread over our fifty states and territories--means very few votes and very little money.

I don't see it your way. The ARRL has nowhere near 700,000 members but it is very effective in lobbying government. It does so with few votes and little money to spread about. It wasn't long ago that some folks outside amateur radio wrote about wishing they were as good at lobbying as radio amateurs.

The point to all this is that it is quite easy to sit on the sidelines and snipe at the ARRL and to put forth unsubstantiated charges against it from behind the cloak of anonymity. It is quite another to put together an alternative to the ARRL. If you desire to do so, nothing is stopping you.

Being one of those, who got RIFF'ed, in the Clinton/Gore
Gutting/Bloodletting of the Field Operations Bureau back
in the Day.... I agree with Phil, 100%. the public got
the FCC that they deserved, by allowing the Politicos
to politicize the Commission. It used to be run by Engineers,
now it is run by Political Wonks. Life is tough, and then you
DIE....

Well, OK, it's a "virtual" HF rig, and you can only use it FREE for 90 days and then it costs $32.00 user fee per year.

Kind of an interesting concept, sort of "Ham Radio VOIP", Phone or CW mode, and restricted to licensed hams.

Certainly not a replacement for "real radio", but when the bands are dead......... Could also serve as a neat CW training environment.

I agree with Rick; I've used Echolink for years with a dynamic IP address.

However, let me pass along my experience. I took a working Echolink setup and moved it from one ISP to another, and it refused to work. I could "listen" fine, but I couldn't establish a connection to another node. This was resolved by obtaining a static IP address from the new ISP.

It's not that Echolink needs a static IP address to work . . . it's that my new ISP handles security differently for customers with static IP addresses than for "normal" customers. They do not allow "normal" customers to accept a request for an IP connection from another node; this is a part of their firewall setup. It does make sense; there is vanishingly little legitimate reason for this and they're effectively protecting their customer base from a segment of malicious software. However, Echolink does require this ability; when you connect to a node that action triggers a request from the other node for an IP connection.

So in my case, even though Echolink doesn't need a static IP address, obtaining a static IP address was what allowed it to work. I suspect that this situation isn't unique to my ISP, which is why I'm relating the story.

73, Steve KB9X

I have had a senior moment and forgotten the URL for an amateur website.
On the homepage the website has brownish orange backgrounds and blue title bars.
Total brain fibrillation on my part I can't remember the URL.
TIA
Dan

Give us a clue ;-)

There are thousands of amateur sites out there, probably tens of thousands..! Any idea of the content..? Was it a personal site, a commercial/business one, DX info, club/society site or what..?

"Doug Smith W9WI" <w9wi@invalid.nospam> wrote

> Isn't it WAY too early to be writing off this cycle?

Oh, I'm not "writing it off", Doug.

But it isn't looking good for the "most active cycle in 50 years" predicted in that article.

It's alarming to note that the words "Maunder Minimum" are being heard more and more in polite society. Five years ago that phrase would have people rushing to their Funk and Wagnalls, now we just shake our heads up and down and say "Could be, yes, it could be."

For those who realize the impact the sun has on our communications,
http://www.swpc.noaa.gov/SWN/index.html is a good site to monitor.

Space Weather Warnings and Alerts from our friends at the National
Weather Service are also available.

Yet those who are in tune with the Palos Verdes Sundancers and who read the weekly epistles from Cass, have no fear of what is to come. Those who recall the words of Red-eyed Louie, the Little Pistol and the Old Timer at the top of the hill realize that DXing is a moveable feast.

> ============= MODERATOR'S COMMENT: Getting a little obscure, aren't we?

Not at all obscure if you're one of The Deserving.

Dave's comments are about the characters who inhabit the writings of Hugh Cassidy, WA6AUD (SK) , the editor of the West Coast DX Bulletin from 1968 until 1979.

This is classic Amateur Radio lore, written by someone who "got it".

His depiction of the mentoring between "The Oldtimer on the Hill" and "The QRP'er" are classic Amateur Radio lore, written by someone who "got it".

Now then, does anyone have an eMail address for East Coast Bob?

73, de Hans, K0HB
Just a boy and his radio

> ===================================== MODERATOR'S COMMENT: Getting a little obscure, aren't we?

Not for anyone who ever read The West Coast DX Bulletin. Here's a sample of the output from the typewrite of WA6AUD:

"WEST COAST DX BULLETIN Published every week by the Marin County DX Group. One of our local QRPers came by last week, troubled and anxious. "It's that I figure I'm over the hill", this QRPer explained. "I'm around the bend for sure. I am sore and troubled and these wounds of mine....these spiritual wounds....are grievous burdens. I suspect that I have had it". We nodded in sympathy for we know those dark watches of the night when a DXer must wrestle with his fears....that he will miss one. "And just what is the problem?", we asked. "Have you turned fifty? Or something like that?". The QRPer jumped to his feet and glared at us. "I thought that you!..you of all people would understand", he exclaimed. "That you would know what it is to work your 300th country and there is little left for you. You!!..", he said and away he went. We did not call after him for we know the wounds of the spirit and that dreaded 300th country sticker has felled more than one noble DXer. For one must watch...and $10.50 will bring you a full year of DX Warning Signals... $12.00 flights the alerts at you by airmail. Beware the 300th Sticker!! Worse than Normans Woe!!"

If you like it, you may go to the following url to read more:

http://www.geocities.com/k2cddx/wcdxbarch.html

I have about five entire years worth of the WCDXB with which I'll never part. Where else can one find historic DX doings combined with magnificent prose?

Dave K8MN

Hey all,

I installed a Bugcatcher in my vehicle last year, and thought I might share some tips from my experience.

1. Power supply.

Run separate wires for power. Don't try to run an HF rig off a cigar lighter outlet. I don't care if is an FT-817.....

2. Ground, ground, ground

Getting the "other half" of the antenna to work well is probably the most important thing you can do. As well as providing the "ground", it eliminates a lot of little antennas that can give you RFI headaches.

I used coax shield with lugs soldered onto the ends to bond everything. Keep them as short as practical. Mine were around 4 inches, the longest around 6 inches. In most cases, the bond can be made by using bolts that are already on the vehicle. In a few cases I had to drill and bolt. Be careful of where vehicle wires are already running.

Bond the hood on both sides, all the doors, the hatch if there is one. Don't forget to bond the exhaust pipe in at least 2 places. The exhaust even looks a little like an antenna.

Bond the radiator, especially if it is one of the newer ones that have plastic ends. There is usually some place on the metal part that has a bolt you can attach to.

Bonding the engine is mandatory. If your vehicle has a frame, like mine does, bond the frame to the body at several locations.

I probably ended up with 30 different places when I bonded.

3. Ferrites are your friends

I used clip on ferrites. These worked well, and were something around a dollar a piece.

Clip them on:

Alternator wires, battery wires, radiator fan wires, gas pump power wires, radio speaker wires, ignition coil wires (some engines now have a separate coil for each cylinder. If you can reach your wiper motor and washer pump motor clip one on there also.

If you can get a ferrite on the dreaded main computer module it would be a big help also. I just happened to have a big clip on from an old IBM computer that fit around the cable of my computer unit.

4. Look for other sources.

After all the corrections I made, I suddenly found S9 level noise on HF. I looked to see if ferrites had fallen off, or a bond failed. I bought a cheap transistor radio to sniff out the problem.

Turns out that my inverter for my laptop is really noisy. I unplugged it, and the problem went away.

In the end, my mobile HF system is less than S2 (that was as low as I could test it, seemed to be just around ambient. The only noise source that I haven't beat yet is the cruise control, and I can just avoid using that. Finally, I have to remember to keep the car stereo turned off while transmitting, otherwise I get some strange stuff coming out of the back speakers.

Oh, and by the way, the antenna appears to work "very well", at least I've gotten good signal reports on 40 and 20, and reasonably good ones on 75 meters also. It seems to make use of the limited efficiencies we see with short HF aerials.

Don't know if anyone else has anything to add, but I thought I'd share this.

-73 de Mike N3LI -

Strangely enough, I took absolutely NONE of these precautions - and my
mobile is working nicely. (that doesn't mean I recommend ignoring Mike's
points!)

I'm even running it from the lighter outlet. Figured it would be OK
for the ride home from Milwaukee running 20 watts or so. Kept creeping up
the power, I'm now at 80 watts (all bands) & not a hint of trouble.

Again, I don't recommend it though!

The biggest source of QRN are leaky powerline insulators. Next biggest
source are passing semis. (last time I was HF mobile, semis were quiet.
Obviously something has changed in the typical truck engine?)

My Hamsticks are quite effective on 40 - can work pretty much anyone I can
hear if there isn't a pileup, and sometimes even when there is. Managed
to work a VK6 on 40 at sunset on my way into town a few months back -
that's darned near the antipodes from here. Managed to work VP6DX on 80
from the car! Strangely 20 doesn't work quite so well, though I still
work plenty of DX.

I would say that what's happening is this: The necessities (house, medical, transport) are getting more expensive while the luxuries (computing power, flat-screen TV, plane tickets where you have a lot of leeway as to destination and time) are getting cheaper. Put them all together and inflation *seems to be* low. But the mix is different than it was years ago.

On top of that is the fact that the number of "necessities" keeps rising. To give an Amateur Radio example, there was a time when putting up a moderate-sized tower in most areas did not require a variance or a building permit. A ham-homeowner simply put it up, or at most went down to the township building, filled out a form and paid a small fee.

Nowadays in many areas there are much more stringent engineering and insurance requirements for an Amateur Radio tower. The local ordinances often consider it a "structure" and the process is much more complex and costly. So while the price of the tower itself isn't much more than it used to be, adjusted for inflation, the total price of owning an *installed* tower has greatly increased.

One more issue: LIfespan of certain items, such as ham rigs. Compared to most electronic items, it seems to me that ham rigs have a very long useful lifespan compared to other electronics. Decades rather than years. Just look at the stuff for sale at Dayton or elsewhere. What do others think?

> Ahh, the Priuii are very cool vehicles. I shoulda known
> you'd be an owner of one.

TNX. It's a different sort of vehicle! They are common around here; summer 2006 there was a long wait for one. Like many cars, a lot depends on what kind of driving you do and how you drive.

> On a Ham related topic, have you noticed much electrical

> noise from it? I've heard some scuttle that they make some RFI.
> Don't
> know what that is in comparison to a regular gas vehicle, as they > can be
 noisy also.

Can't say; never been mobile on the ham bands in it! But I suspect
that the inverters would make a least some noise.

Still miss the diesel, though. 17 years with the same car; only owner
from showroom to crusher.

73 de Jim, N2EY

Amateur Radio Newsline(tm) Report 1601 - April 18, 2008

CLOSED CIRCUIT FINANCIAL REPORT

The following is a closed circuit announcement. Ladies and gentlemen, a few words from the Amateur Radio Newsline support fund administrator Andy Jarema, N6TCQ:

--

Yep, its me. A.J. And if I'm here you likely suspect that once again the Amateur Radio Newsline is in desperate need of your financial support. And you would be right.

If you look back, you will notice that the last time you heard me soliciting donations was way back in 2007. Thanks to your generosity last year the need for me to make these announcements was minimal.

We know you prefer to hear the news rather than having to listen to these announcements and we agree. But over the past few months almost all donations have ceased so here we our with our annual spring pitch.

As we have said so many times before, it takes money to gather the news. It takes money to assemble a newscast and it takes money to bring it to you. And as the price of goods and services continue to increase so do our operating costs. The cost of telephone service. The cost of web access. The costs related to hosting our website and providing you with download F-T-P of the newscast. The coat of equipment repair and upgrade. In essence, all of the costs involved in bringing you 52 newscasts a year as we have done for almost 31 years.

We do our very best to keep operating expenses to a minimum. Everyone involved in the Amateur Radio Newsline is a volunteer. There is no paid staff.

More important, all of the monies you donate go only toward operating expenses and in supporting the Young Ham of the Year Award. And for you, your donation is tax deductible.

We even make it very easy to donate. If you have web access all you need to do is take your web browser to www.arnewsline.org. Then click on the words "Make A donation" and use your Pay-Pal account or credit card to transfer into ours.

Or you can use the good old method of writing a check and sending it to Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Either way, we thank you for your kindness. For your support and for your trust.

OK. Time for me to get back to my desk and back to balancing the books. For the support fund, I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1601 with a release date of Friday, April 18tht, 2008 to follow in 5-4-3-2-1.

The following is a QST. Dayton honors three hams for their outstanding contributions to Amateur Radio. We have their reaction. Also, repeater coordinators will meet the public at Hamvention 2008 and a ham who devised a possible cancer cure is featured on the CBS news program 60 Minutes. All this and more on Amateur Radio Newsline(tm) report number 1601 coming your way
right now.

**

HAM HONORS: DARA ANNOUNCES 2008 AWARD WINNERS

The Dayton Hamvention has announced the names of the recipients of this years Technical Achievement, Special Achievement and Radio Amateur of the Year Award awards. Awards that some call the Tony, the Emmy and the Oscar of ham radio. Amateur Radio Newsline's David Black, KB4KCH, spoke to this years recipients, all of whom are thrilled to have been chosen.

--

The Hamvention's top honor--Amateur of the Year--goes to H. Ward Silver, N0AX, of Bellevue, Washington:

--

NA0X: "I'm still kinda buzzin' from gettin' the call."

--

Silver's name is synonymous with helping many people get into ham radio. He's the author of books including Ham Radio For Dummies, along with magazine articles and manuals for the A-double-R-L. Readers of QST magazine recognize his name as author of the Hands On column. Ward says his writing is intended to show that becoming a radio amateur is not hard and carries lots of rewards.

--

N0AX: "I guess when I was a kid in the basement I never really thought I was ever going to be Dayton Ham of the Year material but its great to be noticed"

--

Silver admits ... he didn't see the Hamvention award coming:

--

N0AX: "It was a big surprise and I was really flabbergasted to get the call. Its not something you expect and I was very gratified and thankful to the committee and however I got nominated is terrific."

--

Terrific is what the Hamvention thinks of the idea Emery W. McClendon, Sr., KB9IBW, had back in 2003. That's when the Vietnam Wall exhibit made a stop in Fort Wayne, Indiana. McClendon and fellow hams set up an operating station at the exhibit, as part of what McClendon called ARMAD, Amateur Radio Military Appreciation Day. The hams invited military veterans to participate--and McClendon says participate, they did.

--

KB9IBW: "We contacted a lot of stations worldwide and around the country and it actually brought tears to a lot of peoples eyes. It was very emotional as they were able to hear other veterans.

"Some were active duty in the military and a lot of Vietnam veterans were on the air that day and it brought a lot of tears and a lot of memories back to a lot of people."

--

ARMAD's popularity has grown every year, drawing recognition by Indiana Governor Mitch Daniels, as well as Congressmen, Senators and even the Indianapolis Colts. McClendon's work has led to the Hamvention naming him as winner of this year's Special Achievement Award. He says the Hamvention's recognition gives him a special feeling of accomplishment:

--

KB9IBW: "I was really happy about it because it was a surprise. That's not what I am doing all this for. I'm doing it trying to promote Amateur

Radio, but it is an honor."

--

McClendon says ARMAD is helping ham radio grow:

--

KB9IBW: "We've gained several new members to our clubs here and people inquiring as to how to become Amateur operators and who have tested and become operators because of what we have done here with ARMAD."

--

Another ham being honored is Thomas C. McDermott, N5EG, of Medford, Oregon. He's winner of the Hamvention Technical Achievement Award.

--

N5EG: "It was really not expected."

--

McDermott has spent more than 20 years helping promote various amateur radio technical projects including wireless digital communications.

In 1986, McDermott co-developed the TexNet packet switching network which covered 3,000 miles at 9600 baud on UHF and connected to nearly fifty links on 2 meters. He's a founder of the Texas Packet Radio Society and headed up a 900 MHz spread spectrum project and developed the TAPR-AMSAT Windows software development system.

--

N5EG: "Hams have been innovators (for) over a hundred years and the one thing that hams are good at is kind of thinking outside of the box in terms of coming up with new solution and new technologies.

"A number of the previous award winners have been recognized for doming up with outside the box solutions, and so I think that kind of the creative aspect of hams is well matched. And so a lot of hams are interested in technology and interested in novel solutions."

--

Ward Silver...Emery McClendon...and Thomas McDermott...three amateurs getting special recognition for their contributions to ham radio. They'll be recognized when hams worldwide gather for the ultimate ham radio convention, Hamvention 2008, May 16th, 17th and 18th.

From the Southeast Bureau in Birmingham, Alabama, I'm David Black, KB4KCH, for the Amateur Radio Newsline.

--

If you're interested in knowing more about ARMAD, the project Emery McClendon started, you can check out the project's website at www dot armad-dot-net.

You can hear more with this years Hamvention award winners on the Rain Report. Its on-line at www.therainreport.com. (KB4KCH, ARNewsline(tm))

**

REPEATER COORDINATION: NFCC TO MEET IN DAYTON

Still with Hamvention news, word that the National Frequency Coordinators' Council will be holding an open meeting at the 2008 Dayton Hamvention. Moderated by NFCC President Jay Maynard, K5ZC, the gathering takes place on Friday, May 16, from 9:15 to 1015 a.m. in Forum Room 5 of the Hara Arena.

For those not aware, the National Frequency Coordinators' Council has as its members the majority of frequency coordination bodies in the United States. This forum will update NFCC members and those interested in frequency coordination on the current status of the organization and spectrum management.

Again that's Friday, May 16, from 9:15 to 10:15 a.m. in Forum Room 5 of the Hara Arena for the NFCC at Hamvention 2008. (Via e-mail)

REGULATORY ISSUES: I MISS THE FCC

"I Miss The FCC" is an in-depth look at the current state of the Federal Communications Commission in the April issue of C-Q Magazine that's certain to raise some eyebrows in the nation capital as well within the ham radio community. Penned by Jeff Reinhardt, AA6JR, who is also a contributor to Newsline, the article traces the agency from its days as the enforcer of technical standards to the FCC of today which seems to be bending over backward to the whim and will of those it is supposed to regulate.

One of the cases cited by Reinhardt was the Telecommunications Act if 1996 which revamped the original 1934 legislation. Reinhardt notes that much of it was written by industry lobbyists which resulted in the nations airwaves being delivered to commercial interests.

The bottom line: Jeff Reinhardt's "I Miss The FCC" is a must read for hams, G-M-R-S, CB'ers and any small entity that uses radio spectrum. It sheds a whole new light on what is really happening in the halls and offices of the FCC. It begins on page 66 of the April issue of CQ Magazine. (CQ, ARNewsline(tm))

RESCUE RADIO: CONGRESS ASKS WHY NOBODY BID ON NEW EMCOMM SERVICE

A congressional panel wants to know why a plan aimed at using public airwaves and private money to create a nationwide emergency communications network failed to attract any interest in a recent spectrum auction.

The FCC had approved construction of the emergency communications plan last summer. Under the scheme, the regulatory agency set aside about one sixth of the recently auctioned airwaves for such an interoperable system to be built. Called the D block, it would have been combined with a roughly equal portion of spectrum controlled by the public safety trust to create a shared network. The winning bidder for the D block would be required to build and maintain the network in the public interest. It would eventually make a profit by selling any excess broadband access to wireless service providers.

When the auction had been completed all but Block D had been sold. Now, the House Energy and Commerce telecommunications and the Internet subcommittee is to hear testimony from all five members of the Federal Communications Commission on the issue. It also plans to summon key figures in the behind-the-scenes negotiations that failed to lead to an agreement to construct the wireless broadband network.

The government says that construction of such a network is essential to avoid the emergency communications gaps that occurred with Hurricane Katrina in 2005 and the terrorist attacks of September 11, 2001.

The FCC had placed a $1.33 billion minimum bid to win this public safety frequency block. That, combined with the untold billions of dollars needed to build and maintain it with may have scared off potential investors in this time of economic downturn. Especially with no immediate way to see a return on the investment.

It also means that for the foreseeable future, Amateur Radio remains the only non centralized fully interoperable emergency communications system in the United States. Hams say that they are more than ready to meet the challenge. (ARNewsline(tm) from published reports)

**

HAM HISTORY: INTERNATIONAL MARCONI DAY - APRIL 26

An important radio celebration is coming up. Jim Davis, W2JKD, has the details:

--

The 21st International Marconi Day event takes place on Saturday, April 26th. This is a 24 hour operating event held annually to celebrate the birth of Guglielmo Marconi which took place on the 25th April 1874.

International Marconi Day is not a contest. Rather, it is an opportunity for radio amateurs around the world to make point-to-point contact with historic Marconi sites using High Frequency communications techniques similar to those used by Marconi. Its also a chance to qualify for an attractive citation for achieving the requisite number of Marconi Award stations worked.

International Marconi Day is usually held on the Saturday closest to Marconi's birthday. Award Stations and rules for International Marconi Day are on line at www.gb4imd.org.uk.

--

Again Marconi Day this year is on Saturday, April 26th and runs for 24 hours. Many commemorative stations around the world will be on to take part in the celebration. (Southgate)

ENFORCEMENT: FLORIDA UNLICENSED BROADCASTER FINED $1500

An unlicensed broadcaster in Florida has been fined $1500. Roubens Maignan of Port Saint Lucie was ordered to pay the forfeiture after the FCC traced a signal on 106.1 MHz to his home.

Maignan was initially hit with a Notice of Apparent Liability for Forfeiture in the amount of ten thousand dollars.. Maignan submitted a response to the N-A-L requesting a reduction or cancellation of the proposed forfeiture. . While de did not dispute the violation but did claim that he did not know that his actions violated the rules or the Communications Act. Maignan also stated that payment of the forfeiture would pose an undue financial hardship to his family.

The FCC says that after examining the financial documentation submitted with the response that a reduction in the amount of the fine to $1500 was appropriate in this case and affirmed that amount. Maignan was given the customary 30 days to pay or to file an appeal. (FCC)

**

ENFORCEMENT: MICHIGAN CB'ER ADMITS USING LINEAR

An unnamed Michigan C-B operator who admitted he was using an illegal amplifier has been warned by the FCC to stop using it and to stop causing interference to his neighbors.

Back on March 26th agents from the Detroit office attempted to inspect the suspected CB station but its owner was not available. In a subsequent March 28th telephone call with an FCC agent, the operator reportedly admitted using a 350 watt CB linear amplifier.

Now, in its April 2nd follow-up letter the FCC has warned the CB'er that operation of the linear constitutes the use of radio transmitting equipment without a valid radio station authorization and that this is a violation of the Federal law. He was told that this could lead to punitive action in the form of monetary fines, seizure of his equipment, and criminal sanctions including imprisonment. The CB operator was ordered to respond back to the FCC and address all of the allegations against him within ten days. (FCC)

**

THE SOCIAL SCENE: SHELBY HAMFEST FOLLOW-UP

A follow-up to last weeks story on the possible closing of the Shelby Hamfest. Despite recent contract disagreements between the Shelby Amateur Radio Club and the Cleveland County Fair Association, plans are continuing to hold the 50 year county tradition that draws electronics aficionados from across the country.

According to a report in the Shelby Star newspaper, Hamfest Chairman Robby Hamrick, WA4RH, is quoted as saying that as far as the Hamfest going on, right now, we're still in the process of planning.

Hamrick told the Star that the Shelby Hamfest has not been cancelled but at the moment the club is unsure as to where it is going to hold it. Hamrick said that the group is looking at all its options.

As previously reported, the Shelby Hamfest will not take place at its usual location because of disagreements with this year's contract conditions set by the fairgrounds association. Decisions on what steps will be taken will be posted to the hamfest website www.shelbyhamfest.com/ as soon as they are available. (Shelby Star, others)

**

THE SOCIAL SCENE: BOXBORO WANTS YOU

While this event is still several months away the planners of the combined Boxboro Hamfest ARRL New England Division Convention are looking for speakers and other participants to fill out the convention program. The event takes place August 22, 23 and 24th at the Holiday Inn Boxboro Woods in Boxborough, Massachusetts.

According to web postings by the planning people, they have some 50 hours of programming to fill. They are looking for programs and presenters with material that will both captivate and entertain an audience to fill these slots.

Also if you are a representative of a club or organization in need of a place to gather, the folks at Boxboro say that they can help facilitate an open or closed meetings by providing a meeting room for Sunday. If you are interested in taking them up on their offer or if you want to present a forum, please contact Boxboro Program Chairman Ken Caruso, WO1N, by e-mail to WO1N at arrl dot net. More convention information is on-line at www.boxboro.org. (Boxboro Hamfest)

**

THE SOCIAL SCENE: MAJOR UK HAMFEAST CANCELLED

Meantime, from across the Atlantic comes word that rising costs and a decline in attendance have lead to the cancellation of the United Kingdom's
Elvaston Castle ham radio rally. At one time the Elvaston Castle rally was the 2nd biggest hamfest in the East Midlands area of the U-K.. (G0EJQ)

**

NAMES IN THE NEWS: ZS1YT INAUGERATED AS NEW SARL PRESIDENT

Some names in the news. First up is Rassie Erasmus, ZS1YT, who has been inaugurated as the new president of the South Africa Radio League. In his inaugural address Erasmus said that Amateur Radio is a foundation for technical knowledge and that it is no secret that many professionals in the field of radio, TV, communications and electronics have started their technical education as young radio amateurs. He said that it should still be used as a unique attraction for future young radio amateurs.

For his Presidential year he has chosen three themes that flow from the organizations slogan of "Amateur Radio Communication Technology in Action." These are growth in the application of new technologies, growth of the radio amateur community in South Africa and growth of the South Africa Radio League membership to the point where we can say we truly represent the Radio Amateurs of South Africa.

Erasmus also paid tribute to the outgoing President Graham Hartlett, ZS6GJH, for his leadership over the past several years. He presented Hartlett with an honorary life membership of the SARL. (SARL)

**

NAMES IN THE NEWS: CELEBRATING WITH A NEW BOOK UNDER THE ICE

Back in the U-S-A, author Don Keith, N4KC, is celebrating the publication of his latest book and the event it details with an on the air operation. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the story on the book and what's to follow:

--

Don Keith's "The Ice Diaries" tells the story of USS Nautilus, the world's first nuclear vessel, and its historic trip to the North Pole in August

1958.
Keith co-wrote it with the late Captain William R. Anderson who was the submarine's skipper for that history-changing mission. It will be released in July 2008 by Thomas Nelson.

And to celebrate its publication, and the 50th anniversary of the Nautilus reaching the North Pole, N4KC will take to the ham radio airways the weekend of August 2 and 3rd. In a cooperative venture with the Southern New England Region of the Navy and Marine Corps Military Affiliate Radio System and the Submarine Base Amateur Radio Club stations, Don will be operating from the grounds of Historic Ship Nautilus and the Submarine Force Museum and Library in Groton, Connecticut.

The on-air operation will use special events call sign N9N. This stands for "Nautilus 90 North," and recalling the historic radio message sent to President Eisenhower when the ship emerged from beneath the ice pack to announce the mission's success. The North Pole is at 90 degrees north latitude.

Tentative operating frequencies will be 7.279 MHz on 40 meters and 14.243 and 14.343 MHz on 20 meters, depending on prior use and QRM, using SSB. Other bands, modes, and frequencies may also be activated depending on response and demand. Don hopes to work as many of you as he possibly can.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

A Special commemorative QSLs will be sent to those who confirm contact and include a self-addressed, stamped envelope. Further information is on-line at www,n4kc.com. (N4KC)

EMERGING TECHNOLOGY: NRSC ANNOUNCES UPDATED IBOC STANDARD

The National Radio Systems Committee has adopted an updated version of its in-band/on-channel or IBOC digital radio broadcasting standard. According to an announcement made at the National Association of Broadcasters convention in Las Vegas, Nevada, the new NRSC-5-B standard includes some editorial updates, as well as a revised FM IBOC RF mask submitted to the NRSC by iBiquity Digital.

iBiquity Digital developed the original HD Radio IBOC technology. The updated standard will be available to the public at the National Radio Systems Committee website in about four weeks. This, following a final procedural review.

For those not aware, the National Radio Systems Committee is a standards-setting body co-sponsored by the National Association of Broadcasters and the Consumer Electronics Association. (NAB-NRSC)

**

HAM HAPPENINGS: THE ARRL AND TAPR DCC WANTS PAPERS

Technical papers are solicited for presentation at the 27th Annual ARRL and TAPR Digital Communications Conference to be held in Chicago from September 26th to the 28t. These papers will also be published in the Conference Proceedings.

Authors do not need to attend the conference to have their paper included in the Proceedings. The submission deadline is July 31, 2008. Papers will be published exactly as submitted and authors will retain all rights.

Please send papers to Maty Weinberg at the ARRL, 225 Main St Newington, CT 0611. Or you can make your submission via e-mail to maty@arrl.org (WB8IMY)

**

HAM RADIO IN SPACE: CALL FOR CUBESAT PROPOSALS

The European Space Agency Education Office has received good response to its call for CubeSat proposals issued last month to universities in ESA member nations and other cooperating states. This to participate in the development of an educational payload for the maiden flight of the new Vega launch rocket currently scheduled for December.

The launch opportunity on the Vega maiden flight is being offered free of charge for up to 6 CubeSats, with an additional 2 backup CubeSats on back up standby. The ESA Education Office says that it recognizes the growing importance of CubeSat projects as a key tool in providing university students with a valuable hands-on practical education across all space engineering disciplines from end-to-end through the complete space project lifecycle. (ESA)

**

WORLDBEAT INDIA: THE NIAR SLVER JUBILEE

India's National Institute of Amateur Radio will be celebrating its 'Silver Jubilee' in the city of Hyderabad between October 18th to the 20th. To commemorate the event, look for some special activities to take place between October 24th and November 3rd from many locations across India including operations from the Andaman and Nicobar Islands as well as the Lakshadweep Islands.

The National Institute says that it will be assisting foreign amateurs in obtaining reciprocal licenses or operation permits for the VU4 and VU7 activation's. More information is available at www.niar.org. The National Institute of Amateur Radio is India's national Amateur Radio society. (Southgate)

**

WORLDBEAT - IRELAND: ATV REPEATER BACK ON THE AIR

Ireland's EI2WTR fast scan amateur television repeater is back on air from Helvick Head. This after the system was re-housed in separate RF-tight boxes over the winter. The repeater unit consists of a G1MFG Transmitter on 1249 MHz with about 10 watts through to a horizontally polarized slot antenna. It uses a G1MFG Receiver on 1290 MHz from the same antenna through the duplexer. Helvick Head overlooks Dungarvan County in Waterford and is the same site as the 2 metre East Cork voice repeater. (IATV)

**

WORLDBEAT - SCOTLAND: UK FIRST 3 CM FM REPEATER

The first ever 10GHz FM voice repeater in the United Kingdom came on the air on the 14th March. GB3TC, co-sited with GB3CS in Lanarkshire operates on a channel pair of 10.371.1MHz in and 10.471.1MHz out and requires either 103.5Hz sub audible tone or 1750Hz tone burst for access. It also transmits an FM beacon giving its call and locator every 60 seconds when not repeating. More information from www.csfmg.com. (GB2RS)

**

WORLDBEAT - UK: UK REPEATER ON CURFEW TO FIGHT USER ABUSE

A United Kingdom repeater has place a curfew on its operation. This, to combat abuse of the system by some of its users.

According to the GB2RS News Service, the Bristol Channel Repeater, GB3BC, is now being switched off every night from 23.45. The system remains off until 7.00 a.m.. Its administrators say that this operational format will until further notice due to unacceptable levels of night-time repeater abuse.

Unlike in the United States where another repeater might pop on the channel when another goes away, that's not likely to happen in the U-K. This is because repeaters there are individually licensed and the national society rather than members of the ham radio public hold these licenses. A person or group sponsoring a repeater is called a repeater keeper. He, she or they are not licensees.

Also, telecommunications regulator Ofcom is notoriously quick to react against any unlicensed operations within its jurisdiction. (GB2RS)

**

DX

In DX, word from ARRL DXCC Manager Bill Moore, NC1L, that the 2007 G4GIR slash KH9 DXpedition to Wake Island has been approved for DXCC credit. Moore says that if you had cards rejected for this operation, please send an e-mail to the ARRL DXCC Desk to have your DXCC record updated.

Moore and the ARRL have announced several more operations that have been approved for DXCC credit. These include the : the 2007 5X1NH operation to Uganda,; the 2007 S05A operation to Western Sahara; the 2008 operation to Burundi, as 9UXEV; the 2008 YK9G operation to Syria and the current HZ1PS operation in Saudi Arabia.

In general D-X news, word that seven operators are planning to be active as 4U1VIC from United Nations station in Vienna, Austria during the CQ World Wide CW Contest on May 24th and 25th as a Multi-2 entry. QSL info will be announced at a later date.

Z33F and Z31MM will be active at the 3V8SS Tunisian Scout Club Station between from May 15th to the 26th. Listen out for them on all bands including 30, 17 and 12 meters using CW, SSB, P-S-K and even Slow Scan T-V. QSL 3V8SS via IZ8FWN.

Lastly, word that K9GY, will be back at the YN2N station near Granada between November 22nd and December 1st. He plans to be active during the CQ World Wide DX CW Contest on November 29th and 30t) as a Single-Operator, All-Band, Low-Power entry. Please QSL electronically using the ARRL's Logbook to the World but he will accept and respond to printed QSL's as well.

(Above from various DX News Spources)

**

THAT FINAL ITEM: HAM WORKING ON CANCER CURE FEATURED ON 60 MINUTES

And finally this week, a ham who has deeply involved himself in finding a cure for cancer was featured on the Sunday, April 13th edition of the CBS news program 60 Minutes. Bill Pasternak, WA6ITF, watched the segment and has more:

--

John Kanzius, K3TUP, of Erie Pennsylvania, has been working on an RF-based treatment for cancer that is currently undergoing testing. Kansius says he was motivated to find a cancer cure after witnessing the pained expressions of children suffering from the disease and undergoing chemotherapy. This at a time when he to was undergoing the same treatment for Leukemia.

Determined that there had to be a better alternative he believed that radio held the key.

Knowing that R-F can heat metal, K3TUP reasoned that a tumor injected with something metallic could be destroyed without harm to the rest of a patients body. The answer to the need for an injectible metal came in the form of recently developed carbon and gold nano-particles that can be introduce directly into a tumor and then radiated with a machine that K3TUP designed and built. Initial experiments on lab animals have proved promise in the system but many more trials are needed before the treatment can be tried on humans.

Cancer researchers interviewed on the program said that they are very excited about John Kanzius discoveries. No research dollars are now flowing into a pair of studies on animals. This, in the hope of refining the system to where it can not just also destroy localized tumor but also to keep the cancer cells from spreading to other parts of the body. Much of the 60 minutes report was dedicated to this ongoing work.

John Kanzius, K3TUP, says he hopes it happens in his lifetime.

At the studio in Los Angeles, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.

--

You can see the segment of 60 minutes in its entirety at http://www.cbsnews.com/stories/2008/04/10/60minutes/main4006951.shtml?source=RSSattr=HOME_4006951

You can read more about John Kanzius, K3TUP, and his ground-breaking idea to kill cancer cells with radio in the February 2008 issue of QST Magazine. (ARNewsline(tm) from various sources)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www.YHOTY.org.

Also, a reminder of our on-line website poll. This month we are asking how high the price of a gallon of gas has to go before it keeps you from hopping into your car for a ride over to a hamfest. To vote, simply take your web browser to www.arnewsline.org, scroll down until you see the poll area on the left side of the screen and cast your ballot. The real time results that includes your vote will be instantly displayed.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

I've one of these sitting on the work bench which doesn't want to "lock".

I've no details beyond the Model (615) and make (QMB Electronics).

I'm not sure if it is modern enough to be designed for 198kHz (rather than the older 200kHz) R4 signal or if it is a 60kHz beast.

The innards don't look overly complex but some other details would save me some time.

Anyone got any details, please?

Sorry, I don't know. It must be a switching
supply instead of just a heat-generating
series regulator.

The ARRL Letter
Vol. 27, No. 15
April 18, 2008
****

IN THIS EDITION:

* + QST Contributing Editor H. Ward Silver, N0AX, Named Hamvention "Amateur of the Year"
* + ARRL Teachers Institute off to a Great Start
* + ARRL Diamond Terrace Grows
* + Amateur Radio "Well Represented" at National Hurricane Conference
* + Forum Schedule Announced for Dayton Hamvention
* + International Marconi Day Event Is April 26
* Solar Update
* IN BRIEF:
      This Weekend on the Radio
      ARRL Continuing Education Course Registration
    + New Apparel Items Now Available from ARRL
    + JARL Operating Award Checking Available at Hamvention
      Mexico Group On the Air for World Amateur Radio Day
      Notes from the DXCC Desk
      ARRL Discontinuing Web Classified Ads

+Available on ARRL Audio News <http://www.arrl.org/arrlletter/audio/>

==> QST CONTRIBUTING EDITOR H. WARD SILVER, N0AX, NAMED HAMVENTION "AMATEUR OF THE YEAR"

The 2008 Dayton Hamvention Awards Committee has named QST Contributing Editor and author H. Ward Silver, N0AX, as its 2008 Amateur of the Year. The committee said Silver's "books and teaching materials have helped many become hams." Tom McDermott, N5EG, will receive Hamvention's Technical Achievement Award to recognize his technical contributions that helped digital ham radio expand. Emery McClendon, KB9IBW, was named the recipient of the Special Achievement Award for starting Amateur Radio Military Appreciation Day (ARMAD) in 2003 as a way for Amateur Radio to express support and appreciation for our service men and women. The winners will be feted at a dinner held May 17 at the Marriott Hotel in Dayton.

Silver, an ARRL Life Member, was first licensed at age 17 in 1972 as WN0GQP and upgraded to Amateur Extra and changed his call sign to N0AX in 1976. A contester and DXer, he is on the DXCC Honor Roll.

Silver's award nomination cited his "many contributions, including 'Ham Radio for Dummies,' his first effort to show that becoming a ham does not have to be a difficult challenge. His additional books, magazine articles and his 'Hands On Radio' column in QST have all helped many hams develop their knowledge and skills." Silver was awarded the ARRL's Bill Orr, W6SAI, Technical Writing Award in 2003. He is also the editor of the ARRL's Contester's Rate Sheet and the ARRL Antenna Design Course. Silver has also written feature articles and product reviews for QST and compiles QST's "Contest Corral" column.

Silver, who lives on Vashon Island near Seattle, Washington, worked closely with community leaders and the Vashon-Maury Island Radio Club (W7VMI) to provide effective emergency communications. According to the awards committee, radio club members, along with the fire district and the Community Emergency Response Team (CERT), have created one of the "best local communications systems in the state of Washington."

Calling it "really, really nice and a complete honor" to be named Amateur of the Year, Silver told the ARRL that "It's a humbling experience to even be nominated, much less be chosen. To whomever is responsible for the nomination and to the Hamvention Committee, thank you. Receiving the award would be impossible without readers, colleagues, mentors and friends -- so it's just as much for them as it is for me. Being recognized will keep my fires lit to go on producing, strive for better accuracy and clarity and figure out how to make it all be fun, too. I'll just try to act like I deserve it -- most of the time."

The Hamvention Technical Achievement Award goes to Thomas C. McDermott, N5EG, for his "more than 20 years of involvement in projects which further the development of Amateur Radio." According to the awards committee, McDermott co-developed the TexNet packet switching network in 1986; based on datagram routing, it covered much of the South Central United States in the 1990s.

McDermott, an ARRL Life Member, received ARRL's Doug DeMaw, W1FB, Technical Excellence Award in 2004. Licensed for almost 40 years, McDermott is a member of the IEEE and holds a bachelor's in electrical engineering. His Amateur Radio interests lie in HF digital communications, hardware and software design, and an occasional HF contest.

McDermott was the founder of the Texas Packet Radio Society. As part of that group, he designed the hardware and some of the protocols for the TexNet packet switching network; he has been involved in numerous Tucson Area Packet Radio (TAPR) projects and has written a textbook on wireless communications. McDermott holds eight patents.

Emery McClendon, KB9IBW, is to receive the Hamvention award for Special Achievement for his efforts in starting Amateur Radio Military Appreciation Day (ARMAD) in 2003. He said he started ARMAD "as a way to have Amateur Radio serve as a tool for the people of our communities to be able to express 'live' support and appreciation for our troops, veterans, retired military and first responders." McClendon, of Fort Wayne, Indiana, became an Amateur Radio operator 16 years ago. His interest in organizing Military Special Events derives from his four years of service in the US Air Force and two years in the Indiana Air National Guard.

Amateur Radio Military Appreciation Day has become a popular event, spreading to other communities. Several military support groups have developed an interest in having Amateur Radio as a part of their activities. According to McClendon's award nomination, this has resulted in introducing Amateur Radio "to thousands of people worldwide who otherwise would have never known about our public service."

McClendon is active with two local Amateur Radio clubs; he also gives presentations about Amateur Radio to community groups. His activities, including ARMAD, have resulted in many TV, radio and media stories during the past five years, giving exposure to the Amateur Radio community.

Hamvention Chairman Carl Rose, K8CPR, praised the winners, saying: "On behalf of the Dayton Amateur Radio Association and Hamvention 2008, it is my pleasure to congratulate this year's award winners. I ask all hams to join me in recognizing the outstanding contributions and the many years of service the winners have given to the Amateur Radio Service." The world's largest Amateur Radio gathering, Hamvention attracts more than 20,000 people to the greater Dayton area each spring. Dayton Hamvention is May 16-18 at Hara Arena near Dayton, Ohio.

==> ARRL TEACHERS INSTITUTE OFF TO A GREAT START

The first of six Teachers Institutes in 2008 -- hosted by the Museum of Science & Technology in Tampa, Florida -- wrapped up April 10. The 11 participating teachers came away from the experience with a multitude of ideas to improve their classroom instruction. According to Mark Spencer, WA8SME, Director of the ARRL Teachers Institute on Wireless Technology, the four-day institute "focuses on the science of radio, bringing space technology into the classroom, microcontroller basics and basic robotics with emphasis not only on the basic concepts, but also teaching strategies to bring those concepts into the classroom."

Spencer said the Teachers Institute curriculum is an ever-evolving process; this year, a radio telescope project was added that can be used to demonstrate the fundamentals of radio astronomy. The "Soldering 101" unit was enhanced with the addition of a 24-hour clock kit that the teachers construct and learn how to solder in the process. Finally, a BOT Instructor's Board was added to enhance the teacher's ability to instruct basic robotics. Spencer said he designed and developed the BOT board to "tie all the different pillars of the Teachers Institute into one umbrella activity that teachers can use to pull the school year together. The board also can be used to instruct the individual components of robotics, as well as instruct TV remote technology." Spencer said he added an ATV component with the board: "There is a lot of stuff going on with this particular resource."

The Teachers Institute isn't all inside classroom work. The teachers participate in a fox-hunt activity, take part in ham satellite QSOs and observe the collection of satellite imagery transmitted by NOAA satellites -- just as they can do in their classrooms.

Here are a few of the comments from the first 2008 Teachers Institute participants that summarize their experience:

"One of the other teachers in our Academy of Engineering and Design Technology class has applied to attend the Teachers Institute in Dayton this summer. She is excited about the class after hearing of it and seeing my show-and-tell session."

"We are working on robots now in my class and will be well entrenched by the end of this school year. Next year promises to be fun and exciting for the students. The Teachers Institute was a great experience, and the personal tutelage was responsible for making it so."

"Wonderful doesn't begin to describe it. I knew the basics of radio communications and transmission through electromagnetic waves, but I now understand it better than I ever have. The robot was very cool -- it reinvigorated my love of programming. It only took me four attempts to run the maze perfectly! I also made many contacts that I will use to help throughout my teaching career!"

"The instructor is great, absolutely great -- proof that if you do what you love, you'll love what you do!"

"Thanks again for the wonderful experience. I am looking forward to implementing what I learned in the classroom. Please let me know if you will be offering any follow up institutes."

The remaining Institutes for 2008 are just about filled to capacity, Spencer said. "Though the application deadline is May 15, the available seats filled up fast. If you are a teacher, or know of a teacher who could benefit from the experience, don't wait to submit an application for the few remaining seats. If you can't make it this year, perhaps next year. We are adding two additional instructors in anticipation of expanding the program in the future."

Five more Teachers Institutes are scheduled for 2008: June 16-19 in Rocklin, California at the Parallax Facility; June 25-28 in Tucson, Arizona at Pueblo Magnet High School; July 14-17 in Dayton, Ohio at P&R Communications, and July 28-31 and August 4-7 in Newington, Connecticut at ARRL Headquarters. Enrollment in these four-day expenses paid sessions is limited to 12 participants each. Application deadline is May 15, 2008. Applicants must be an active teacher at elementary, middle or high school level, or hold a leadership position in an enrichment or after-school program; an Amateur Radio license is not required. For more information, please visit the Teachers Institute Web site <http://www.arrl.org/FandES/tbp/ti.html>.

==> ARRL DIAMOND TERRACE GROWS

Spring is finally here and it's that time -- time to expand the Diamond Terrace at ARRL. "We've been waiting all winter for the opportunity to add new inscribed bricks and today's the day," said ARRL Chief Development Officer Mary Hobart, K1MMH. "Since the last installation in the fall of 2007, we've been accumulating bricks from Diamond Club donors who have donated generously to honor their own call sign or that of an Elmer, friend or family member." The 150 bricks were moved Thursday, April 17 to the Terrace area in preparation for the masons to arrive early Friday morning to begin work.

Hobart said this installation is not the end of the project: "The Diamond Terrace project continues as long as members want to place bricks -- or we run out of space! We continue to receive requests from individuals as well as clubs to place bricks in the Terrace, so the project is still growing. Now is the perfect time to renew or join the Diamond Club -- or upgrade -- at the Brass Level so that we can install bricks over the next six months or so."

The terrace ultimately will consist of 5000 bricks. "We hope it will be a catalyst for growth, and that many members will support this effort," she said.

For a minimum donation of $250 to the ARRL Diamond Club, donors will receive one personalized brick to be placed in the Diamond Terrace. Donors may request up to three lines of 16 characters (spaces and punctuation included) per line on each brick, although the more lines, the smaller the characters. Legends may consist of a call sign or a name -- or both -- or a club name and call sign and even a year. Diamond Club members contributing $250 or more each year may add a new brick, or bricks, to the terrace.

There is no limit to the number of bricks a Diamond Club member may place on the Terrace. Brick requests will be accumulated throughout the year and placed in the Diamond Terrace starting in late spring of each year. Bricks will be set in sand and are treated to withstand a harsh New England winter.

The Diamond Terrace recognizes donors wishing to venerate their own call signs or to honor or memorialize the call sign of a family member, club or "Elmer" (mentor) bricks. "I have heard wonderful stories from donors who are honoring their Elmer or a family member, and clubs who are honoring a founder or influential leader. There is no limit to the reasons why bricks are placed to honor a call sign," Hobart said.

Especially generous donors may wish to donate a garden bench to The Diamond Terrace at ARRL for an initial donation of $10,000. "Six garden benches of Vermont granite, the capstone of the Terrace, have been placed, thanks to the contributions of six incredibly generous hams," Hobart said. Bench donors include Frank Butler, W4RH; Larry Price, W4RA; Dick Isely, W9GIG; Paul Rinaldo, W4RI; Mike Zak, W1MU, and the Hollywood

Hills QRP Contest Club.

"We had plans to refurbish the Headquarters entrance area, so this was an ideal opportunity to invite our members to participate in the project and supporting League programs at the same time," said Hobart. "We want to grow the Diamond Club, which enables the ARRL to continue programs that require revenue above and beyond what annual dues provide, ensuring their long-term health and enabling the League to do more on behalf of Amateur Radio."

When the ARRL Diamond Terrace was officially opened in July 2007, ARRL Chief Executive Officer David Sumner, K1ZZ, said, "All of us who work here in Newington get to enjoy the Diamond Terrace every day when we come to work. We get to walk through a greatly enhanced entrance that sends the right message to staff and to our members, as well as visitors, about the character and tradition of our organization."

ARRL President Joel Harrison, W5ZN, concurred: "When you talk to the average ham out on the street, and you ask him what's important to him in Amateur Radio, he will tell you, 'I want to go into my shack, I want to turn on my radio and I want to get on the air. I want to enjoy Amateur Radio. You take care of that for me. You are my organization, the ARRL; you handle that for me.'"

Harrison continued that in order for that to happen, a lot of work takes place behind the scenes. "With all that we have going on in Washington, nationally, with all the attacks on Amateur Radio's resources, it takes people like you in Newington, it takes people like we have on the Board of Directors and most importantly, it takes people who donate to our development program to make that all happen. The Diamond Terrace is just one part of that, and it's a successful part. It adds a lot of meaning to Amateur Radio and to the ARRL. From the bottom of my heart, I want to say 'thank you' to every one of our donors."

Diamond Club enrollment ($75-$249 per year for regular members; $50 annually for Life Members) includes ARRL full-member benefits, including QST. The Diamond Club now has more than 2000 members, and the unrestricted funds it takes in support such ARRL activities as spectrum defense, educational initiatives, field services, DXCC, publications, contesting and the ARRL Volunteer Examiner Coordinator among others, Hobart points out. "You pick an area that's near and dear to your heart, and Diamond Club revenue is very likely supporting it."

The ARRL Diamond Terrace, built by Robert Antonello and Son, under the watchful eye of ARRL Building Manager, Greg Kwasowski, W1GJK, and Hobart, is a lasting tribute to Amateur Radio and the ARRL. "I hope that those who are fortunate to visit ARRL Headquarters will enjoy the new look of their Amateur Radio home. It has been a pleasure to work with each Diamond Club donor to craft the engraving for their brick, and I hope many can come and see the terrace personally," Hobart said.

Contact Hobart by telephone (860-594-0397) or e-mail <k1mmh@arrl.org> or visit the ARRL Web site

<https://www.arrl.org/forms/development/donations/diamondclub/diamond.html> to learn more or to sign up for your Diamond Club membership and Diamond Terrace brick.

==> AMATEUR RADIO "WELL REPRESENTED" AT NATIONAL HURRICANE CONFERENCE

More than 2000 people attended the 30th Annual National Hurricane Conference in Orlando, Florida March 31-April 4. Conference Chairman Max Mayfield stated in his opening remarks that he was pleased to see such a turnout, despite the fact that the 2007 hurricane season didn't impact the United States as in past years. ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, attended on behalf of the League.

According to Dura, Amateur Radio was well represented in the pre-Conference training with a variety of presentations. The National Hurricane Center (NHC) maintains a fully equipped and functional Amateur Radio station at its headquarters, WX4NHC. Station coordinators John McHugh, K4AG, and Julio Ripoll, WD4R, provided a comprehensive overview of the activities of the NHC, emphasizing the interaction and importance of Amateur Radio in the forecasting of tropical events. McHugh further detailed the Caribbean Amateur Radio Meteorological Emergency Network (CARMEN) program, discussing how the program in its current stage can use revitalization and rebuilding to provide improved information to the NHC.

Director of Operations for the VoIP Hurricane Net Rob Macedo, KD1CY, presented a detailed overview of the system that integrates EchoLink and the Internet Radio Linking Project (IRLP). "For the past few years," Dura said, "this operation has been building to become another reliable source of information for the National Hurricane Center."

Dura and Macedo offered the final Amateur Radio presentation of the Conference, "Disaster Intelligence and Situational Awareness Utilizing Amateur Radio." This discussion went beyond the traditional uses of Amateur Radio into the areas of damage assessment, infrastructure monitoring, communications systems replacement and rapid situational analyses, Dura said.

According to Dura, NHC Director Bill Read, KB5FYA, has had an active past using Amateur Radio at NWS facilities. "He personally utilized ham radio during SKYWARN activations dealing with severe weather. He completely understands and acknowledges the vital role we play in providing the National Hurricane Center through WX4NHC. He hopes to have some time in his new role to actually get on the air with the hams of WX4NHC and once again use our tremendous resource of information gathering," Dura said.

During the Conference, Read praised Amateur Radio, saying, "Ham radio has always played a critical role in emergencies. What goes out when you have a high wind event or major flooding is the communications system, so you lose even cell phones, landline phones, commercial radio and TV. In those cases, ham radio operators that can put up emergency transmitters and antennas in the wake of a storm can give us reports that are valuable. They also help in the search and rescue efforts in the aftermath."

==> FORUM SCHEDULE ANNOUNCED FOR DAYTON HAMVENTION

One of the many highlights at Dayton Hamvention is the myriad of educational and fun forums that take place the entire weekend at Hara Arena. The Dayton Amateur Radio Association has coordinated 46 unique programs that encompass nearly 80 hours of programs and activities for the thousands of people expected to attend these programs. Hamvention, the largest event of its kind, will be May 16-18 at Hara Arena in Dayton Ohio. Please keep in mind that the schedule may change before Hamvention.

Friday, May 16
9:15-10:45 AM - TAPR Digital Forum (Room 1)
9:15-10:15 AM - ARRL Public Relations -- Making It Work for You Locally (Room 2)
9:15-10:15 AM - Lightning Protection for the Shack (Room 3)
9:15-10:15 AM - National Frequency Coordinators Council (Room 5)
10:30-11:30 AM - ARRL Member Forum (Room 2)
10:30-11:30 AM - Teachers Workshop (Room 3)
10:30-11:30 AM - SATERN -- Salvation Army Team Emergency Network (Room 5)
11 AM-1 PM - D-STAR Forum (Room 1)
11:45 AM-1 PM - Kit Building (Room 2)
11:45 AM-12:45 PM - The Evolution of the National Traffic System (Room 3)
11:45 AM-12:45 PM - SHARES Forum (Room 5)
1:15-2:15 PM - Balloon Forum (Room 1)
1:15-2:15 PM - APRS - Automatic Position Reporting System (Room 2)
1-2:30 PM - Ham Radio and the Law (Room 3)
1-2 PM - QRP Forum (Room 5)
2:15-3:15 - Young Ladies Radio League (Room 5)
2:30-3:45 PM - Drake Forum (Room 2)
2:45-3:45 - Gordon West -- Digital Signal Processing Speakers (Room 3)
3:30-5 PM - Test Equipment for Hams (Room 5)
4-5 PM - Amplitude Modulation Forum (Room 2)
4-5 PM - 10-10 International Forum (Room 3)

Saturday, May 17
9-10 AM - How Ham Radio Meets Boy Scouts, or Adventures with Elmer Baden-Powell (Room 2)
9-10 AM - MARS Tri-Service Forum (Room 3)
9-11:30 AM - Software Defined Radio Forum (Room 1)
9-11:30 AM - AMSAT Forum (Room 5)
10:15-11:15 - Don't Tell Me It Can't Be Done! (Room 2)
10:15-11:15 AM - ARES Forum (Room 3)
11:30 AM-12:15 PM - ARRL Radiosport Forum (Room 2)
11:30 AM-1:45 PM - 2008 Ham Radio Town Meeting (Room 3)
11:45 AM-1:45 PM - ATV (Fast Scan Amateur Television) Forum (Room 5)
11:45 AM-2:15 PM - Contesting Forum (Room 1)
12:30-1:30 PM - RTTY Forum (Room 2)

1:45-2:45 PM - MIDCARS (Room 2)
2-3 PM - ARRL Technology Task Force (Room 5)
2-3:15 - FCC Forum with Riley Hollingsworth (Room 3)
2:30-5 PM - DX Forum (Room 1)
3-5 PM - UHF/VHF/Microwave Forum (Room 2)
3:15-5 PM - Youth in Amateur Radio Forum (Room 5)
3:30-5 PM - SSTV Forum (Room 3)

Sunday, May 18
9:15-10:15 AM - ARRL and the Mars Desert Research Station (Room 1)
9:15-10:15 AM - Collins Radio Forum (Room 2)
9:15-10:15 - The Role of Ham Radio in Red Cross Chapter Communications (Room 3)
9:30-11:15 AM - Bicycle Mobile Forum (Room 5)
10:30-11:30 - ARRL Digital Forum (Room 1)
10:30-11:30 AM - Techniques of the Best Operators (Room 2)
10:30-11:30 AM - Ohio MARS Forum (Room 3)

For more information on forums at the 2008 Dayton Hamvention, please visit the Dayton Hamvention Web site <http://www.hamvention.org/hv2008/forums/index.html>.

==> INTERNATIONAL MARCONI DAY EVENT IS APRIL 26

Special event stations will be on the air Saturday, April 26 (UTC), to mark International Marconi Day (IMD), a 24-hour Amateur Radio event commemorating the birth of wireless pioneer Guglielmo Marconi on April 25, 1874.

Participants can qualify for awards by making contacts on 160 through 10 meters (CW, SSB and digital) with designated IMD stations operating on or near a site where Marconi carried out experiments or where Marconi equipment was used prior to his death in 1937. The sponsoring Cornish Radio Amateur Club (CRAC) will operate GB4IMD from Pendennis Castle, Falmouth, Cornwall, overlooking Falmouth Harbour where Marconi spent some 10 days aboard his yacht in April 1923.

Additional IMD stations will be on the air from the UK, the US, Canada, South America, Australia and Europe. The IMD Web site has a list of IMD 2008 award stations <http://www.gb4imd.org.uk/awardstns.htm>.

On the US side, the Marconi Cape Cod Radio Club, KM1CC, will participate at the Coast Guard Station on Coast Guard Beach in Eastham, Massachusetts, just south of Marconi's original 1903 station on Cape Cod.

If you would like to operate an IMD 2008 award station, register your station prior to the event, providing full details <webmaster@gb4imd.org.uk>. More information on International Marconi Day can be found on the IMD Web site <http://www.gb4imd.org.uk/>.

==>SOLAR UPDATE

Tad "Wild men who caught and sang the Sun in flight" Cook, K7RA, this week reports: We saw a string of zero-sunspot days over the past couple of weeks, but this week saw a brief but significant sunspot that lasted only a couple of days. Sunspot 990 emerged as a tiny speck over April 14-15, but it was definitely a Solar Cycle 24 spot. Not only was the polarity of this region correct for the new Cycle, but it was far north above the Sun's equator, which is what we expect for a sunspot from an emerging solar cycle. The only previous Cycle 24 activity was close to the solar equator. Sunspot numbers for April 10-16 were 0, 0, 0, 0, 11, 12 and 0 with a mean of 3.3. The 10.7 cm flux was 67.9, 67.1, 68.2, 69.3, 68.5, 69.2 and 69.5 with a mean of 68.5. Estimated planetary A indices were 8, 4, 11, 7, 2, 5 and 15 with a mean of 7.4. Estimated mid-latitude A indices were 6, 3, 8, 6, 2, 3 and 9, with a mean of 5.3. Geophysical Institute Prague predicts quiet conditions April 18, quiet to unsettled April 19, quiet April 20, quiet to unsettled April 21, active April 22-23 and unsettled to active April 24. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, look for the Holyland DX Contest, the TARA Skirmish Digital Prefix Contest, the ES Open HF Championship, the Feld Hell Sprint and the EU Spring Sprint (SSB) on April 19. The Michigan QSO Party, the EA-QRP CW Contest, the Ontario QSO Party and the YU DX Contest are April 19-20. The Run for the Bacon QRP Contest is April 21. The SKCC Sprint is April 23 and the RSGB 80 Meter Club Championship (Data) is April 24. Next weekend, the SP DX RTTY Contest, the Helvetia Contest, the QRP to the Field contest and the Florida QSO Party are all scheduled for April 26-27. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 4, 2008, for these online course sessions beginning on Friday, May 16, 2008: Amateur Radio Emergency Communications Level 2 (EC-002), Amateur Radio Emergency Communications Level 3 (EC-003R2), Antenna Modeling (EC-004), HF Digital Communications (EC-005), VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for

their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* New Apparel Items Now Available from ARRL: Show off your ham radio pride with ARRL's new line of HAM apparel. The new shirt, sweatshirt and ball cap feature the very popular oval Euro design with "HAM" emblazoned in the center and the ARRL Web site address centered underneath it. The T shirt is a pre-shrunk black Hanes beefy-T with white contrast stitching. The HAM oval is screenprinted on the left chest. This trendy T shirt comes in unisex sizes from small to 3X for only $12.95 each. The heavyweight black sweatshirt features a quarter-zip neckline with a brass metal zipper and leather pull. The HAM oval is embroidered on the left chest. This sweatshirt is perfect for the still chilly nights of spring and comes in unisex sizes from small to 3X for only $34.95 each. The black ballcap features the HAM oval embroidered in the center of the cap. With an adjustable Velcro tab closure, this cap is sure to fit just about anyone. Get yours for only $12.95. Receive a free HAM Euro sticker (a $2 value) <http://www.arrl.org/catalog/?item=9595> when you order one of these three HAM items before May 31, 2008. Order your HAM items today <http://www.arrl.org/catalog/?item=NO-HAM#top>.

* JARL Operating Award Checking Available at Hamvention: A representative of the Japan Amateur Radio League (JARL) will be available at Dayton Hamvention May 16-18 to check applications for JARL awards and to issue certificates for certain awards (AJD, WAJA, JCC, JCG, ADXA and ADXA-Half). Those with 10 JA QSL cards each of the 10 JA districts can apply for the All Japan District Award (AJD) at Hamvention. Former JARL executive director and renowned DXer Masa Ebisawa, JA1DM, will be at Booth 484 in the Ballarena of Hara Arena, near ARRL EXPO 2008. Applications for other JARL awards can be checked at the JARL booth, and awards will be mailed from JARL headquarters. Masa also will be ready to answer questions on JARL activities as well as reciprocal licensing in Japan. Applicants do not need to present QSL cards when applying for awards, but they must submit a QSL card list, sign a declaration that they possess all necessary QSL cards and be able to present any card at JARL's request. The QSL card list should include: call sign, date, band, mode and entity (or other data required by each award). Applicants may use a DXCC Record Sheet for their QSL card list. The fee for each award is $14.

* Mexico Group On the Air for World Amateur Radio Day: Amateurs all over the world are getting into the spirit of the 83rd World Amateur Radio Day on April 18. Grupo DXXE <http://www.dxxe.org> of Mexico will be on the air with a special call sign, XE83IARU, that day in honor of the IARU and World Amateur Radio Day. For those pursuing the DXXE award, organizers state this is a valid station for that award. Information on the DXXE Award (in both Spanish and English) is available on the DXEE

Web site <http://www.dxxe.org/index6.html>. QSL via Richard Moen, N7RO, 2935 Plymouth Dr, Bellingham, WA 98225.

* Notes from the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, has announced that the following operations have been approved for DXCC credit: the 2007 operation to Uganda, 5X1NH; the 2007 operation to Western Sahara, S05A; the 2008 operation to Burundi, 9UXEV; the 2008 operation to Syria, YK9G, and the ongoing operation of HZ1PS in Saudi Arabia. If you have cards rejected or have any questions concerning these operations, please e-mail the DXCC Desk <dxcc@arrl.org>.

* ARRL Discontinuing Web Classified Ads: As of April 30, 2008, the ARRL will discontinue the "Radios On-Line" section of the ARRL Web site.

===

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change

your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Interesting! Your car being much more quiet might be the result of a couple things. It is quite possible that you done good in the purchase. Another possibility is that the bugcatchers are kind of a tour de force in mobile antennas, and are designed to push every parameter in order to maximaze efficiency as much as possible in the HF-unfriendly dimensions available. High-Q coils (which even screwdrivers lack) and the necessary short lengths of the entire antenna make all mobile HF setups pretty marginal.I'm one inch short of the maximum height allowed for a vehicle on US roads. The penalty for this is that the bugcatcher tunes extremely sharply. I have 2 taps on the coil for 75 meters, and I'd probably need several more to extend to 80 meters. On 40 and up, one tap per band is usually sufficient.

http://www.w5dxp.com/shootout.htm

Has some results of a shootout of various mobile antennas.

Now all that being said, there is a lot of work in putting my HF mobile setup together. I wanted/needed to tweak out every bit of performance available for mobile contesting, and was willing to put the time into it, which ended up being quite a lot of time. I did get to try it out in the CAQSO party, and it worked okay on 20 meters, PA to CA. I got good signal reports up and down the east coast on 40. On 80, well, they didn't ever ask me to repeat myself. But anything below 40 meters is dicey in operating mobile. I didn't get to use it in the PAQSO which was my main reason for putting it together, due to a death in the family. Later this year, I'll do a more scientific test, as much as one can be done with antennas by someone without access to an antenna range....

And oh yeah - the bugcatcher is quite a sight, especially on a little Suziki Vitara, even more so, with a 20 inch capacity hat on it. Not everyone wants to look like that.

2002 Ford Focus ZX3. Not selected for RF quietness. (when I bought it I
had no plans to operate mobile below 144MHz) Obviously it *is* reasonably

quiet in terms of radiated RF, though conducted RF into the AM BCB radio is pretty bad! (often the IC-706, with a 40m Hamstick, receives AM BCB stations better than the car's own radio.....)

Unfortunately it's got 150,000 miles now & I'm starting to think about the next vehicle. Guess I should take along the TH-F6 and a dozen feet of wire or something.

> Another possibility is that the bugcatchers are kind of a tour de force in mobile antennas, and are designed to push every parameter in order to maximaze efficiency as much as possible in the HF-unfriendly dimensions available. High-Q coils (which even screwdrivers lack) and the necessary short lengths of the entire antenna make all mobile HF setups pretty marginal.I'm one inch short of the maximum height allowed for a vehicle on US roads. The penalty for this is that the bugcatcher tunes extremely sharply. I have 2 taps on the coil for 75 meters, and I'd probably need several more to extend to 80 meters. On 40 and up, one tap per band is usually sufficient.

At least on 40 that's wider than my Hamstick. Two settings are necessary for useful operation across the band (one for CW and one for phone) and even that's marginal. Never tried 80 without the tuner. 20/15/10 are indeed useful without retuning.

My solution was to buy a LDG AT-7000 autotuner. I didn't expect much. (just to be able to get full power from 7000 to 7050 without stopping to retune) I have been VERY happily surprised. Not only does the tuner promptly present a decent match to the radio across the entire 40m band without adjusting the antenna, but efficiency is quite reasonable. No problems in working DX from 7000 to 7300. With the 20m Hamstick in place the autotuner also allows work on 30 and 17m - not very well, but it *is* possible to make QSOs.

The efficiency may not be the best. But it does work, and pretty well.

> Now all that being said, there is a lot of work in putting my HF mobile setup together. I wanted/needed to tweak out every bit of performance available for mobile contesting, and was willing to put the time into it, which ended up being quite a lot of time. Later this year, I'll do a more scientific test, as much as one can be done with antennas by someone without access to an antenna range....

Mine kinda grew out of a FT-8900R installation. Was enjoying the heck ou

t
of 10m FM (and 6) but they weren't open enough. So I bought the 706 & started gradually adding bands.

It probably would have made more sense to buy a Bugcatcher.   (probably cheaper than five Hamsticks and an autotuner)

Have used it in the TN QSO Party to the tune of 300-something QSOs. Also the KY contest two years ago.

> And oh yeah - the bugcatcher is quite a sight, especially on a little
> Suziki Vitara, even more so, with a 20 inch capacity hat on it. Not
> everyone wants to look like that.

One day with a previous mobile, I was listening to 27.185 for some reason & heard a couple of truckers commenting about the "weird porcupine car" with all the antennas. This thing probably triggers similar comments. BCB rubber duckie, VHF/UHF tribander (antenna handles 222 but the radio doesn't...), HF antenna, and then a second 2m antenna for occasional APRS
.
 Then if the bike rack is on the car.....

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group every month. You are now reading the first article, which explains what rec.radio.info is, and answers some Frequently Asked Questions. The second article is titled Posting Guidelines, and you only need to read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:
 - What is the purpose of rec.radio.info?
 - Why are messages almost always cross posted to rec.radio.info?
 - What is a 'follow-up', and what does 'moderated' mean?
 - OK, so now I know what 'moderated' means. Tell me more.

- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit chat about radio. Rec.radio.info will contain informational, factual articles only. Follow-ups are redirected to an appropriate other group, and further discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

```
/Newsgroups:.*[ ,]rec\.radio\.info/h:j
```

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

```
rec.radio.info:!s/:^
```

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

```
sequence
rec.radio.info
rec.radio.
```

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

In slrn, according to the srln FAQ, the following scoring rule will |
allow you to see rec.radio.info-crossposted bulletins, while still |
filtering out most SPAM or "Velveeta" crossposted to more than 2 |
newsgroups (as such articles usually do not contain a 'Followup-To:' |
header): |

```
Score: -9999                                                      |
        Newsgroups: ,.*,                                          |
        ~Followup-To: .                                           |
```

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

   rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article

to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group and to rec.answers/news.answers every month. You are now reading the second article, which explains how to submit something to rec.radio.info, and which answers some Frequently Asked Questions about the submission process. The first article is titled "Welcome to rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post the article to rec.radio.info, as you would do with any other newsgroup. The difference is that the software recognizes the special status of rec.radio.info as a moderated group, and will e-mail your article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the transparency offered by the newsreading software is probably more convenient.

If you have any questions, or wish to deal with some administrivia with the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have to read it first, give it the stamp of approval, and finally send it on to the group. We will attempt to read and decide on all submissions within 72 hours at the very least, though we will probably be able to process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore,

will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc	Amateur (ham) radio and related matters
rec.radio.amateur.packet	Amateur Packet Radio discussions
rec.radio.amateur.policy	Amateur Radio practices, rules, etc.
rec.radio.noncomm	Non commercial radio discussions
rec.radio.shortwave	International broadcasting on the 'HF' bands
rec.radio.cb	Citizens Band (27 MHz) discussion

rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make

arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field

will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

```
 Message-ID: <$opa.55.1994@ampr.org>                                              |
```

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

 -- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

Amateur Radio Newsline" Report 1602 - April 25, 2008

Amateur Radio Newsline report number 1602 with a release date of Friday, April 25tht, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC will netcast its meeting to revise the Emergency Alert System, a not so funny intruder to 70 centimeters down-under, changes in the rules for Field Day 2008 and Newsline's e-mail is spoofed. Find out the details on Amateur Radio Newsline" report number 1602 coming your way right now.

(Billboard Cart Here)

RESCUE RADIO: FCC TO WEBCAST EAS PLANNING SUMMIT MAY 19

The Federal Communications Commissions Public Safety and Homeland Security Bureau will webcast a Summit on the nations Emergency Alert System on Monday, May 19th. Bill Pasternak, WA6ITF, reports:

--

In line with the Commissions July 2007 Second Report and Order on the Emergency Alert System, the Summit discussions will focus on the current state of the nations E-A-S and what is needed to transition it to a more robust, Next Generation alert and warning system. One that will help ensure that all citizens receive accurate and timely information during emergencies.

The Summit will be open to the public; admittance however will be limited to the seating available. The venue is Commission Meeting Room at the FCC's Washington D.C. headquarters building from 9:00 a.m. to 12:45 p.m. Eastern Daylight Time. Those individuals who are interested in attending may pre-register on-line at: http://www.fcc.gov/pshs/summits/eas . The deadline for pre-registration is Thursday, May 15, 2008.

As mentioned there will be streaming Audio and Video coverage of the meeting. It will be carried live with open captioning over the Internet from the FCC's web page at www.fcc.gov.realaudio Access to webcast is free to the public and does not require pre-registration.

Whether or not the ARRL, REACT or any personal radio emergency communications organization will be a part of this gathering? That not known at this point in time.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, at the studio in Los Angeles.

--

Again, that E-A-S planning meeting is Monday, May 19th. The Commission says that it will release additional information and an agenda in the near future. (FCC)

**

ALERT: NEWSLINE E-MAIL BEING SPOOFED

Amateur Radio Newsline's e-mail addrsss has been spoofed and yoy may have been the target.

If you received an unexpected e-mail with our return address of newsline@arnewsline.org with a message written in Cyrillic Rusiam and asking you to call a strange telephone number, delete that e-mail at once. Its not from us and there is every reason to believe that calling that phone number could be a hoax or scam.

Every once in a while spammers and Internet scammers randomly pick an e-mail address and use it to send outs thousands if not 10's of thousands or even millions of pieces of spam e-mail. This week it appears to be our turn.

We found out about it when several hundred bounced e-mail filled our incoming mailbox on Wednesday the 23rd. We notified our I-S-P but in reality all that can be done is to wait for the spoofing attack to pass.

Meantime, if you were one of those who received the Russian spam, just delete it because it was not from us. Also, remember this general Internet safety rule. Never, ever click on any link in any e-mail that you are not expecting, even if you know the person who sent it. There is no way to know if that e-mail is real or just another web spoof like the one our e-mail address was used for this past week.

Be wise. Do not click any link or call any phone numbers that came unsolicited. Make Internet safety your top priority and you will not only protect your computer but also your personal information as well. Information that the crooks on the Internet will stop at nothing to get. (ARNewsline")

**

BREAKING DX NEWS: GLORIOSO ISLAND OPERATION POSTPONED AGAIN

If you have been one of those patiently waiting for Glorioso Island to come on the air, you are going to have to wait a bit longer. This is because the DXpedition to Glorioso originally scheduled for May 6th to June 6th has been postponed once again.

The reason this time is construction. Starting in June a number of new tropical storms shelters will be built on Glorioso. The work will take at least two and a half months. Due to the large number of workers on the island during the construction the authorities decided to postpone the DXpedition until the work has been completed.

The exact dates for the Dxpedition to take place will be determined by the availability of transportation to and from Glorioso. The operators say that they hope to accomplish the operation by the end of September or the beginning of October at the latest. We will have more D-X related news later on in this weeks Amateur Radio Newsline report. (DXNL)

**

ON THE AIR: RULES CHANGES FOR FIELD DAY 2008

Three major changes have been announced in the rules guiding this years ARRL Field Day.

First is that the Demonstration Mode bonuses have been replaced by an Educational Activities bonus.

Second, The Get On The Air or G-O-T-A station may now also operate on the VHF bands but only one band at a time.

Lastly, a newly licensed amateur who has received his or her ticket dince Field Day 2007 may operate the G-O-T-A station regardless of license class, but this does not apply to upgrades. The League says that an upgrade is not the same as a new license.

Field Day 2008 runs from 1800 U-T-C on June 28th to 2100 U-T-C on June 29th. The complete rules are on the ARRL's website at www.arrl.org/contests/rules/2008/fd.html. You can also find them starting on page 81 of the May issue of QST magazine. (ARRL)

**

RADIO ON THE WEB: ARRL TO DISCONTINUE RADIOS ON-LINE LISTINGS

Call this a case of a few spoiling it for the many. The few are those arrogant hams who have insisted that the ARRL rules regarding what is permissible to post on the ARRL's Radios On-Line web ads does not apply to them.

According to ARRL Chief Operating Officer Harold Kramer, WJ1B, the ARRL has experienced an increased number of complaints by members and users of the service. This, regarding postings and practices that do not conform to the Radios On-Line Web site's original intent.

According to Kramer, despite efforts to regularly monitor the site problems have continued. These include postings for guns and other personal ads. Kramer says that the ARRL staff that administers this service has deleted these items and notified the 'poster.' A day or two later they find the ads back on the site and placed in every category.

Kramer says that the ARRL is spending far to much time dealing with this matter and making it is no longer worth the cost of maintaining the service. So as of April 30th the ARRL says that it will discontinue listing classified ads in the Radios On-Line are of its website.

As we said, it only take a very few to spoil it for the many. (ARRL)

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the W6JW repeater serving Los Angeles and Santa Clarita, California.

(5 sec pause here)

**

ENFORCEMENT: A COMEDY INTRUDER DOWN-UNDER

It was no laughing matter when signals popped up on 70cm band during the recent Melbourne Comedy Festival down-under. But the Australian Commuications and Media Authority -- the ACMA -- wasted little time in dispoing of this one. Jim Linton, VK3PC, f the WIA News reports"

--

Staff of a security company were equipped with imported Chinese made hand-helds radios. They believed they were CB radios and okay to use for communications on the streets of Central Melbourne.

The ACMA acted quickly on reports of the intruders and was taking appropriate action to ensure compliance with the Radiocommunications Act.

The fear among the amateur radio community is that this incident could be just the start of many more commercial uses of similar radios.

That fear comes amid reports of another intrusion on the 70cm for valet parking at a major Melbourne entertainment complex.

For the Amateur Radio Newsline, I'm Jim Linton, VK3PC.

--

Whether you live in Australia, Europe, here in the U-S-A or anywhere else there is a good chance that attempting to engage pirate operations like this in on-air discussion may be a breach of our amateur license conditions. That means holding a QSOI with the intruder could get you into as much trouble as the unlicensed station with the cheapo H-T. (WIA News)

**

ENFORCEMENT: COMPASSIONATE FCC FINES UNLICENSED BROADCASTER ONLY $100

The FCC has shown a lot of compassion as it issued and affirmed a monetary forfeiture in the amount of only $100 to Dwayne Simon of California. This, for operating an unlicensed radio transmitter on 95.9 MHz in Lancaster area.

Simon had originally been issued a Notice to Apparent Liability in the amount of $10,000. This following a December 30, 2006 visit by FCC agents from the Enforcement Bureaus Los Angeles office. During their visit the agents interviewed Simon and inspected the station. During the questioning Simon acknowledged that he was aware of the Commissions requirement for a license to broadcast. He also said that he was aware of the Commissions enforcement efforts against other pirate broadcasters in the Lancaster area.

Before leaving, the agents issued an on-scene Notice of Unlicensed Operation to Simon. At the end of the interview Simon told the agents that he would not operate the station again and indicated that he would pursue an Internet-based radio station as an alternative.

But Simon apparently did not keep that promise. On April 6, 2007, Los Angeles agents again visited Simon and inspected his station. Simon again acknowledged operating the unlicensed station on 95.9 MHz.

On June 18, 2007, the Los Angeles Office issued a Notice of Apparent Liability in the amount of $10,000 to Simon. In his Response, Simon did not dispute the facts outlined in the proposed fine. Instead he apologized for his actions and stated that he had dismantled his transmitter. He also asserted an inability to pay the forfeiture and supplied personal financial information to support this claim.

The FCC says that in analyzing Simons financial hardship claim that it found it to be true and warranted a reduction in the amount of the fine. In this case to the amount of $100 which Simnon was given 30 days to pay or to file a further appeal. (FCC)

**

THE SOCIAL SCENE: SHELBY HAMFEST ANNOUNCES ITS NEW VENUE

The Shelby Hamfest will be heading a few miles East to a new venue. This with word that the Shelby Amateur Radio Club will hold the 52nd Annual Shelby Hamfest at Biggerstaff Park also called Gaston County Park. in Dallas, North Carolina instead of the Cleveland County Fairgrounds closer to Shelby.

As previously reported, the separation stems from earlier contract disputes between the club and the Cleveland County Fair Association. New contract stipulations for the fairgrounds put Hamfest in jeopardy. The radio club thought the fair association's contract changes were unacceptable, leading to a stalemate. The club was beginning to wonder if they would be able to hold this years hamfest but it didn't take long for Gaston County to take interest. As a result the new home for the Shelby Hamfest will be Dallas Park.

The Shelby Hamfest is one of the oldest and largest in the United States. It was first held at Shelby City Park and began as a one-day event attended by less than 100 people. The Hamfest eventually outgrew the City Park and moved to Bracketts Cedar Park in Casar, North Carolina. By 1979, it had outgrown Bracketts and moved to the Fairgrounds. In that time the event has grown to where it attracts between 8000 to 12000 over the Labor Day weekend. According to amateur radio operators who have attended since its beginning, one of the major reasons for its growth and continued success has been the small town friendly feeling that visitors enjoy. (Cleveland County Star)

**

THE SOCIAL SCENE: AMSAT / TAPR BANQUET AT HAMVENTION 2008

The second annual AMSAT/TAPR Banquet will be held during Dayton Hamvention on Friday evening at the Kohler Presidental Banquet Center, Kettering, Ohio. The evening will begin with a cash bar at 6:30 PM. Dinner will be served at 7:15.. Please contact martha@amsat.org at the AMSAT office for information or call to make reservations. (ANS)

**

NAMES IN THE NEWS: SHES THE ONE WHO DID IT - ON STILTS

A staff member of the Radio Society of Great Britain staff set a new world record in the recent London Marathon. Not for the speed in which she ran it, Rather 21 year old Michelle Frost's name has gone down in the Guinness Book of Records as the first person ever to complete the 26 mile course while running on 4 foot high circus stilts.

Frost of Bristol, took part in the marathon to raise money for REACH. This is an organization which helps children with upper limb deficiencies.

Prior to the race beginning she told the BBC that it was a bit of a spur of the moment idea because she could already stilt walk, and I thought she would give it a try. To find out more, and to sponsor Michelle, go to www.justgiving.com/rainbowdave. (RSGB)

**

NAMES IN THE NEWS: W3HC RETIRES AS QSL MANAGER

Carl Mc Daniel, W3HC, is retiring as a QSL Manager and that the QSL Manager's Society is acquiring all of the logs and cards from him. All callsigns he was overseeing will be assigned to new managers however it will take some time to sort and make the changes.

Bob Schenck, N2OO, says that anyone who has already sent a QSL via W3HC does not need to re-send it. All mail already received by W3HC will also be passed along to whomever gets assigned as that calls manager. Thus far the currently active callsigns CO6AP, 7X5VRK, PY2KC, YL2EC, TU2XZ, PT5T, PS2T and ZY100S will be handled by Kim Larsen via N3SL. (OPDX)

**

NAMES IN THE NEWS: K1AKS RETURNS AS SM OF NEW HAMPSHIRE

Al Shuman, K1AKS, of New Boston, New Hampshire, has been appointed ARRL

Section Manager of the New Hampshire Section, effective April 21. The League announced the appointment after Sterling Eanes, AK1K, decided to step down due to mounting work responsibilities and other commitments.

Shuman previously served as New Hampshire Section Manager for two previous terms. These were from December 1992 to June 1999 and October 2000 to June 2005. His latest term of office continues through June 30, 2009. (ARRL)

**

THE SOCIAL SCENE: CSVHFS IN KANSAS IN JULY

The Central States VHF Society is calling for the submission of papers and presentations for the upcoming 42nd Annual Central States VHF Society Conference to be held in Wichita, Kansas fro, July 24th to the 26th. Papers and presentations are solicited on both the technical and operational aspects of VHF, UHF and Microwave weak signal amateur radio. The deadline for the submission of papers and presentations is May 15th. More is on-line at
<http://www.csvhfs.org/conference/callforpapers.html>http://www.csvhfs.org/conference/callforpapers.html
(CSVHFS)

**

HAM HAPPENINGS: NET COMMEMORATES TEXAS INDEPENDENCE

On Sunday April 20th, the Texas Heritage Net commemorated the final battle for Texas independence. The combat took place on April 21, 1836, at a place called San Jacinto. Thats where General Sam Houston and less than 900 men defeated Santa Anna's Army and won Texas independence.

Lamar Denby of Huntington, Texas, whose call sign is KD5HLB, served as net control station. Denby is the great-great grandson of Lt. Col. Moses F. Roberts, who fought in the battle of San Jacinto and later served in the Congress of the Republic of Texas. While in office Roberts worked with Sam Houston pushing for the annexation of Texas to the United States.

There were 22 participants for the net. Each will receive a commemorative QSL card. The Texas Heritage Net meets each Sunday evening at 8:00 PM CST on 7 point 227 MHz. (QRZ.com)

**

HAMVENTION 2008: W5KUB TO PROVIDE LIVE STREAMING VIDEO MAY 14 - 18

If you can't make it to this years Dayton Hamvention, Tom Medlin, W5KUB, has the next best thing. He will being many of this years Hamvention highlights right to your home computer screen via broadband video streaming.

According to Tom, the fun starts live on Wednesday May 14th at about 08:00 Central Daylight Time. Thats when he and his crew depart from Memphis, Tennessee for their 550 Mile drive to Dayton. Tom will be streaming the drive live so that those clicking to his website can have fun trying to guess where they are. And thanks to Tom's Helmet cam, you will also be able to or comment about what food they are seen eating.

Web transmissions from the Hamvention begin on Thursday May 15th as we see Tom and his crew set up at Fleamarket spaces 3350 and 3351. Once the show opens on Friday, Ton plans nonstop coverage until closing on Sunday afternoon. Then he invites you to vicariously drive back to Memphis with him as he passes through some of the prettiest countryside that this nation has to offer.

So if you can't be there in person, take your web browser to http://w5kub.com and let Tom Medlin bring the magic of Hamvention 2008 directly to your home computer screen Again, the U-R-L is http://W5KUB.com. There will also be a direct link to Toms streaming video site from the Dayton Hamvention website at www.hamvention.org. (W5KUB)

CHANGING OF THE GUARD: ANTENNA AUTHORITY L.B. CEBIK, W4RNL, - S.K.

Some sad news. Word that famed antenna authority L. B. Cebik, W4RNL, has passed away. Cebik lived in Knoxville, Tennessee and wrote more than a dozen books on antennas. Much of his work was also self published on his well known website at www.cebik.com

A teacher for more than 30 years, Cebik was retired, but served as Professor Emeritus at the University of Tennessee at Knoxville. He was also an ARRL Technical Adviser in the area of antenna design. L. B. Cebik, W4RNL was only 68 years of age. (QCWA)

**

EMERGING TECHNOLOGY: NEW VERSION OF FDMDV RELEASED

A new version of the Digital Voice software FDMDV is now available for download . FDMDV allows you to transmit and receive Digital Voice simply by hooking up your PC to a standard High Frequency S-S-B transceiver.

As reported in past newscasts, the key advantage of mode is that it's transmitted bandwidth is less than half that of S-S-B, just 1 point 1 kHz.

The new version FDMDV 1 point 2 along with updated documentation can be downloaded from n1su.com/fdmdv. (Via e-mail)

**

HAM RADIO IN SPACE: AMSAT AUSTRALIA AND OZSATGROUP MERGE

Two ham radio in space names that are well known down-under have merged. AMSAT-Australia and the Ozsatgroup have combined into a new gorganization, but one that has retained the name AMSAT-Australia.

The two organizations have been working together for more than twenty-four months, and have been discussing such an amalgamation for some time. The decision to go ahead with the merger was made after Graham Ratcliff, VK5AGR formally tended his resignation as AMSAT-Australia National Coordinator and as AMSAT Coordinator for the Wireless Institute of Australia at the WIA Federal Convention on Monday, April 7th.

The role of AMSAT-Australia National Coordinator for the new organization has been taken on by Paul Paradigm, VK2TXT. Paradigm was formally the Coordinator of the Ozsatgroup. He has been joined by Judy Williams, VK2TJU in the role of AMSAT-Australia Secretary. (WIA)

**

RADIO IN SPACE: RADIO BELOW MARS SURFACE

A radar device co-sponsored by NASA on the European Space Agency's Mars Express orbiter has looked beneath the surface of Mars.

The radar sounder on Mars Express is the Mars Advanced Radar for Subsurface and Ionospheric Imaging was built to map the distribution of liquid and frozen water in upper portions of the planet's crust. A complementary radar sounder, the Shallow Subsurface Radar on NASA's Mars Reconnaissance Orbiter uses a different frequency to see greater detail but to a lesser depth. The two signals are then radioed back to Earth for scientific analysis.

As these two instruments continue to provide data, the understanding that they provide about how planetary radar sounders work is prompting ideas for using the technology to explore beneath the surfaces of bodies. These include Jupiter's moon Europa, Saturn's moons Titan and Enceladus, as well as asteroids and comets. (NASA/Jet Propulsion Laboratory Release)

**.

WORLDBEAT - UK: RSGB MOVES TO NEW HOME IN BEDFORD

Turning to news from other parrts of the globe, we start with word that the Radio Society of Great Britain was completely closed from Friday April 18th to Friday April 25th. This was to permit the U-K national society to relocate from its old home at Potters Bar to s new location in the city of Bedford.

Normal operations should resume on Monday April 28th but they ask members to delay any non-urgent business until Wednesday the 30th Because of the move there were to be no updates to the RSGB web site from the 21st to the 25th of April. There was also noGB2RS bulletin on Sunday April 27th. (RSGB)

**.

WORLDBEAT - EAST TIMOR: BRINGING HAM RADIO TO THE NATION

Spain's national society, the Union de Radioaficionados Espanoles or U-R-E has announced a new educational project in East Timor to take place in June. The U-R-E's Radiosolidarity Department will organize a DXpedition combined with activities to promote Amateur Radio in East Timor. This will include the donation of a complete Amateur Radio station at the University of Dili. The Spanish national society hopes that operating alongside students and teachers of the Electrical Engineering and other departments will help make amateur radio a permanent way of life in East Timor. More details and up-to-date information is now available at www.ure.es/hf/eadx/expediciones/4w2008/home.php?lang=en

(URE)

**

WORLDBEAT - SINGAPORE: FUND FOR SPECIAL PROJECTS FOUNDED BY 9V1UV

Singapore amateur K.C. Selvadurai, 9V1UV, has donated $5000 to IARU Region 3. This, to establish a special fund that will enable the regions directors undertake tasks or projects that can better achieve its missions and goals. In making the donation Selva as he I better known expressed the hope that others may also contribute to the new fund. (Southgate)

**

WORLDBEAT - FINLAND EDXC TO MEET IN SEPTEMBER

The 2008 European DX Council or EDXC Conference will be held 5th to the 7th of September in Vaasa, Finland. Organized by the Finnish DX Association as the 50th Anniversary meeting of the club, the conference takes place at the Best Western Hotel Silveria with many activities already planned. More about the event is on line at www.netikka.net/edxc2008/ (Southgate)

**

WORLDBEAT - THE NETHERLANDS: DUTCH VERON ELECTS NEW LEADERS

From the Netherlands comes word that Remy Denker, PA3AGF, is the new president to the Dutch national Amateur Radio society the VERON. Denker replaces outgoing president Dick Harms, PA2DW, who did not seek reelection.

Elected to serve as 1st Vice President is Guido van den Berg, PA0GMM. Jan

Janssen, PA0JMG, has taked the 2nd Vice Presidents slot with Peter de , PA3CWS, elected as the VERON's new Treasirer.

The elections took place at the society's Annual General Meeting on Saturday April 19th. More information is on line at www.veron.nl (Southgate)

**

DX

In DX word that N5FF should be in Damascus and should be active again as YK1BA until May 2nd. He will return home to Texas on May 3rd. As usual, the purpose of the trip is not a DXpedition, so his operating will be spotty. However he hopes to be able to operate at least 3-4 hours a day. QSL via N5FF.

A 6 meter DXpedition to Sable Island is scheduled to take place from June 25th through the 7th of July. VE3IKV, K5AND and W3CMP will be active there as CY0X using CW SSB. Operation will also occur on 20m and 40m, but at a lower priority than six. For more information go to www.cy0x.com.

Cards for the A52AM operation from Bhutan are not valid for DXCC. The

reason given is that because the license was revoked this is considered as an unauthorized operation. For more details, you can view the official paperwork from the Bhutan Department of Post and Telecommunications at www.darc.de/ausland/new/auslref_dokumente/bicma_a52am.pdf

As of April 22nd, N9QGU is on the air from St, Martin on 20, 15 and 10 meters SSB for about two weeks. He will have time to operate only during his early morning and late afternoon hours. QSL as directed on the air.

Lastly, members of the United Kingdom's Grantham Amateur Radio Club are going to Lunga Isle from the 12th to the 17th of June. No callsigns announced yet. More information is on the club website at www.garc.org.uk.

(From various DX news sources)

**

THAT FINAL ITEM: LEARNING MORSE THROUGH SONG

And finally this week, a new song and video about rebuilding a ham radio contest station while at the same time teaches the viewer the Morse code will soon be here. Its from a musical group called the Ham Band. Lissa Ladefoged, of the Ham Band gives us a bit of background on what lead to the song being written and the video being produced:

--

Lissa: "What happened was that we had a small fore in the shack. The fire was caused by an electrical short. So, we actually had to empty the shack. This gave us the opportunity to completely rebuild and we filmed the whole process from the burying of a huge copper grounding plate and the rewiring of all the filters and switches and the installation of rhe three HF stations. Finally the whole station was given a workout by our team in several contests."

--

For those of you new to the the hobby, the Ham Band is a group of musicians based in Denmark who do music about ham radio. Andrew John Huddleston, OZ1XJ is the groups leader and his fife Lissa Ladefoged is they key soloist. They are the only group to ever release an C-D that consists only of songs about ham radio. Called Seek You -- it was introduced several years ago at the Dayton Hamvention and was a sell-out. Since then the groups on-line video single titled "Come And Join Us On The Airwaves" has been at the top of the YouTube charts with over 90,000 views so far. Lissa says the new song could set a record, but not in the way you might think:

--

Lissa: "The song is in three styles. First we have the French musette. And then the Viennese waltz and we wind up with the German oom-pah. Each verse introduces letters and numbers in Morse code so that all numbers and letters are mentioned in the course of the 15 minute song. The song also changes key twenty-four times se we expect to get into the Guinnes Book of Records."

--

Andrew and Lisa say that they hope you will enjoy the new song's preview video. Its on-line at the YouTube at www.youtube.com/watch?v=9s49tnxT8F8 (ARNewsline")

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline". Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's" only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline", P.O. Box 660937, Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www.YHOTY.org.

Also, a reminder of our on-line website poll. This month we are asking how high the price of a gallon of gas has to go before it keeps you from hopping into your car for a ride over to a hamfest. To vote, simply take your web browser to www.arnewsline.org, scroll down until you see the poll area on the left side of the screen and cast your ballot. The real time results that includes your vote will be instantly displayed.

For now, with Bill Pasternak, WA6ITF, at the editors desk, Im Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

The ARRL Letter
Vol. 27, No. 16
April 25, 2008
****

IN THIS EDITION:

* + Court Finds FCC Violated Administrative Procedure Act in BPL Decision
* + Counting Down to Dayton Hamvention
* + ARRL Lab Test Engineer Leaves HQ Staff
* + Antenna Expert L. B. Cebik, W4RNL (SK)
* + What's Coming Up in the May/June Issue of QEX
* + Get Ready for the 2008 Hurricane Season
* Solar Update
* IN BRIEF:
      This Weekend on the Radio
      ARRL Continuing Education Course Registration
    + Hamvention Traffic Update
    + New Section Manager Appointed in New Hampshire
      ARRL to Discontinue Web Classifieds

+Available on ARRL Audio News <http://www.arrl.org/arrlletter/audio/>

==> COURT FINDS FCC VIOLATED ADMINISTRATIVE PROCEDURE ACT IN BPL DECISION

The US Court of Appeals for the District of Columbia Circuit today released its decision <http://pacer.cadc.uscourts.gov/common/opinions/200804/06-1343-1112979.pdf> on the ARRL's Petition for Review of the FCC's Orders adopting rules governing broadband over power line (BPL) systems. The Court agreed with the ARRL on two major points and remanded the rules to the Commission. Writing for the three-judge panel of Circuit Judges Rogers, Tatel and Kavanaugh, Judge Rogers summarized: "The Commission failed to satisfy the notice and comment requirements of the Administrative Procedure Act ('APA') by redacting studies on which it relied in promulgating the rule and failed to provide a reasoned explanation for its choice of the extrapolation factor for measuring Access BPL emissions."

The Court agreed with the ARRL that the FCC had failed to comply with the APA by not fully disclosing for public comment the staff studies on which it relied. The Court also agreed with the ARRL that the Commission erred in not providing a reasoned justification for its choice of an extrapolation factor of 40 dB per decade for Access BPL systems and in offering "no reasoned explanation for its dismissal of empirical data that was submitted at its invitation." The Court was not persuaded by the ARRL's arguments on two other points, on which it found that the Commission had acted within its discretion.

The conclusion that the FCC violated the APA hinges on case law. "It would appear to be a fairly obvious proposition that studies upon which an agency relies in promulgating a rule must be made available during the rulemaking in order to afford interested persons meaningful notice and an opportunity for comment," the Court said, adding that "there is no APA precedent allowing an agency to cherry-pick a study on which it has chosen to rely in part."

The Court continued, "The League has met its burden to demonstrate prejudice by showing that it 'ha[s] something useful to say' regarding the unredacted studies [citation omitted] that may allow it to 'mount a credible challenge' if given the opportunity to comment." Information withheld by the Commission included material under the headings "New Information Arguing for Caution on HF BPL" and "BPL Spectrum Tradeoffs." The Court concluded that "no precedent sanctions such a 'hide and seek' application of the APA's notice and comment requirements."

With regard to the extrapolation factor, the Court ordered: "On remand, the Commission shall either provide a reasoned justification for retaining an extrapolation factor of 40 dB per decade for Access BPL systems sufficient to indicate that it has grappled with the 2005 studies, or adopt another factor and provide a reasoned explanation for it." The studies in question were conducted by the Office of Communications, the FCC's counterpart in the United Kingdom, and were submitted by the ARRL, along with the League's own analysis showing that an extrapolation factor closer to 20 dB per decade was more appropriate, as part of the record in its petition for reconsideration of the FCC's BPL Order. The Court said that the FCC "summarily dismissed" this data in a manner that "cannot substitute for a reasoned explanation." The Court also noted that the record in the FCC proceeding included a study by the National Telecommunications and Information Administration that "itself casts doubt on the Commission's decision."

The briefs for the ARRL were prepared by a team of attorneys at WilmerHale, a firm with extensive appellate experience, with assistance from ARRL General Counsel Christopher D. Imlay, W3KD. Oral argument for the ARRL was conducted by Jonathan J. Frankel of WilmerHale. Oral argument was heard on October 23, 2007; the Court's decision was released more than six months later.

After reading the decision, General Counsel Imlay observed, "The decision of the Court of Appeals, though long in coming, was well worth the wait. It is obvious that the FCC was overzealous in its advocacy of BPL, and that resulted in a rather blatant cover-up of the technical facts surrounding its interference potential. Both BPL and Amateur Radio would be better off had the FCC dealt with the interference potential in an honest and forthright manner at the outset. Now there is an opportunity to finally establish some rules that will allow BPL to proceed, if it can in configurations that don't expose licensed radio services to preclusive interference in the HF bands."

ARRL Chief Executive Officer David Sumner, K1ZZ, added: "We are gratified that the Court decided to hold the FCC's feet to the fire on such a technical issue as the 40 dB per decade extrapolation factor. It is also gratifying to read the Court's strong support for the principles underlying the Administrative Procedure Act. Now that the Commission has been ordered to do what it should have done in the first place, we look forward to participating in the proceedings on remand, and to helping to craft rules that will provide licensed radio services with the interference protection they are entitled to under law."

ARRL President Joel Harrison, W5ZN, concluded: "I am very pleased that the Court saw through the FCC's smoke screen and its withholding of valid engineering data that may contradict their position that the interference potential of BPL to Amateur Radio and public safety communications is minimal. The remand back to the FCC regarding their use of an inappropriate extrapolation factor validates the technical competence of Amateur Radio operators and especially of the ARRL Lab under the direction of Ed Hare, W1RFI. We are grateful for the work of our legal team and especially for the unflagging support of the ARRL membership as we fought the odds in pursuing this appeal."

==> COUNTING DOWN TO DAYTON HAMVENTION

With less than one month to go, everyone wants to know what's new in the ARRL EXPO <http://www.arrl.org/expo> at the 2008 Dayton Hamvention <http://www.hamvention.org>. Who's going to be there? What's happening and when? We here at HQ are gearing up for an exciting time in the ARRL EXPO in Ballarena Hall at Dayton's Hara Arena, and mixing up a bit of the old and the new.

ARRL Membership Manager and ARRL EXPO Coordinator Katie Breen, W1KRB, said, "We have many new publications and apparel items that we are proud to introduce. A highlight is always in the annual release of the '2008/2009 ARRL Repeater Directory' -- new to this year's edition are the handy indexing tabs on the cover so you can quickly find the listings you're looking for. The Directory has new easier-to-read listings because the pocket-sized book is one-half inch bigger."

If you are interested in learning about more tools with which to enjoy Amateur Radio, then the new "VHF Digital Handbook" or "HF Digital Handbook" by QST Editor Steve Ford, WB8IMY, should go home with you! If you'd like a terrific resource of materials spanning a variety of topics, then "Hands-On Radio Experiments" by H. Ward Silver, N0AX, is right up your alley. "We here at ARRL are very proud of Ward's selection as Hamvention's Amateur of the Year," Breen said. "Come meet him and have him autograph your new book."

Breen said that new ARRL mugs and clothing items will be introduced at Dayton this year: "Demonstrate your pride as a radio amateur in your office or your shack. While you're at it, show off being a ham in our new 'HAM' logoed apparel or 2008 Field Day apparel. And to top it all off, it will all go home with you in our new environmentally friendly, reusable bag." All those who purchase $10 or more in the ARRL EXPO will receive a complimentary reusable eco-friendly bag that you can take home and use when grocery shopping and more. All new and renewing ARRL members will also receive this new bag, Breen said.

A new area within the ARRL EXPO this year is the interactive "Doctor Is IN" booth. "You've read the column in QST for years and everyone always wants to know who is behind the costume. Here's your chance to stop by the booth, ask your question and have some one-on-one time with ARRL's Technical Experts. You might even be able to submit a stumper and get it published in QST," Breen added.

This year's Docs On Call will be QST Contributing Editor Ward Silver, N0AX; QEX Editor Larry Wolfgang, WR1B; ARRL Senior Technical Editor Joel Hallas, W1ZR; QST Editor Steve Ford, WB8IMY, and ARRL RF Engineer Mike Gruber, W1MG. On Saturday, automotive experts Mark Steffka, WW8MS, and Don Hibbard, W8DBH, will be on hand to answer your questions. They will be at the Doctor Booth, as well as providing an interactive session in the ARRL Movie Room about mobile Amateur Radio and ignition systems.

Breen said that the Movie Room, a new feature of this year's ARRL EXPO, will host a presentation on "40 Years of the Worked All Europe Contest" presented by Jorg Jahrig, DJ3HW, and Dennis M. Haertig, DL7RBI, of Deutscher Amateur Radio Club (DARC), the German equivalent of ARRL. The movie room will also host a variety of DXpedition videos, Breen said. "The highlight of the video presentations will be with Bob Allphin, K4UEE. Bob will host an interactive session during the viewing of the video of the Peter I DXpedition to the Antarctic. Sit back, relax and enjoy in the new ARRL Movie Room."

The 2008 Dayton Hamvention is May 16, 17 and 18 at the Hara Arena in Dayton, Ohio. Find out about activities within and in conjunction with Hamvention at the Dayton Hamvention's Web site <http://www.hamvention.org>.

==> ARRL LAB TEST ENGINEER LEAVES HQ STAFF

After more than 17 years at ARRL, Laboratory Test Engineer Mike Tracy, KC1SX, is leaving the HQ Family and moving to New Jersey to take on a position with Synergy Microwave <http://www.synergymwave.com/>, a company owned by Dr Ulrich Rohde, N1UL.

Tracy came to the League in 1991 as the night/weekend operator for W1AW. It wasn't long before the W1AW Chief Operator recognized his talent for more technical applications; when a position in the ARRL Lab opened up in 1993, he recommended that Tracy apply. "I did, and was quickly accepted as the new Technical Information Services Coordinator where I handled many of the technical questions of members and referred others to those more knowledgeable on particular subjects. I also developed some databases and other resources to help in the process of answering members' questions," Tracy said. In 1997 when the Lab Test Engineer Mike Gruber, W1MG, stepped down, Tracy switched seats yet again, testing Product Review equipment.

ARRL Lab Manager Ed Hare, W1RFI, said, "When Mike came to the ARRL Lab, he was our Technical Information Coordinator where he helped maintain the TIS Web pages <http://www.arrl.org/tis/>, as well as helping to field technical questions for members. Over the years, Mike, as Lab Test Engineer, helped modernize the test process through new test equipment, new test software and new test methods. In between all that, he always found the time somehow to write articles, watch over the technical content of ARRL's advertising and help other staff more often than his job may have required.

"One of the most pleasant parts of any manager's job is to hear good things about his or her staff. When Mike was in the Lab, my job was pleasant, as staff often told me about how he had helped them above and beyond the call of duty," Hare said.

"Mike's shoes will be hard to fill," Hare said, "but we have hired Bob Allison, WB1GCM, to do just that." Allison, a ham for almost 35 years, most recently worked for a Hartford television station, WVIT, NBC 30, for the past 28 years. Over those years, he has done a lot of things at the station, from testing the television transmitter to day-to-day maintenance of the studio facilities; this, said Hare, "has prepared him to take over this important job in the Lab."

Allison, an ARRL member, has served as a volunteer tour guide at ARRL <http://www.arrl.org/news/stories/2006/08/07/2/>, offering members a friendly and informative tour of HQ that they will remember for a long time to come. "Although he is new at being an HQ employee, we all feel that he has been part of the family for a while," said Hare. Allison and his wife, Logbook of The World Specialist Kathy, KA1RWY, reside in Coventry, Connecticut. Allison also enjoys sailing and working on Model A Fords.

Allison said, "I have been active on the air since I was first licensed as WN1TDN in 1974, where I enjoy operating, experimenting and meeting people from around the world. I can't say what ham band I like best, except all of them. While I enjoy restoring old radios, I very much enjoy the new ones and digital modes such as PSK-31. I am honored and humbled to be part of the ARRL Laboratory Staff and I'm looking forward to serving our members and testing some really cool, new radios!"

Tracy, whose last day at ARRL is today, said, "The various responsibilities I have held over 17 years at ARRL have taught me volumes about the League's membership, Amateur Radio in general and many, many different technical topics related to the Service. The support I received from other HQ staff was invaluable, and I will long remember my time here."

==> ANTENNA EXPERT L. B. CEBIK, W4RNL (SK)

L. B. Cebik, W4RNL, ARRL Technical Advisor and antenna authority, passed away last week of natural causes. He was 68. An ARRL Life Member, Cebik was known to many hams for the numerous articles he wrote on antennas and antenna modeling. He had articles published in most of the US ham journals, including QST, QEX, NCJ, CQ, Communications Quarterly, Ham Radio, 73, QRP Quarterly, Radio-Electronics and QRPp. Larry Wolfgang, WR1B, QEX Editor, called Cebik "probably the most widely published and often read author of Amateur Radio antenna articles ever to write on the subject."

Cebik lived in Knoxville, Tennessee and wrote more than a dozen books on antennas for both the beginner and the advanced student. Among his books are a basic tutorial in the use of NEC antenna modeling software and compilations of his many shorter pieces. A teacher for more than 30 years, Cebik was retired, but served as Professor Emeritus of philosophy at the University of Tennessee, Knoxville. Cebik served his country in the US Air Force from 1957-1961, specializing in air traffic control.

One of Cebik's last articles for QST, "A New Spin on the Big Wheel," appeared in the March 2008 issue. The article, co-written with Bob Cerreto, WA1FXT, looked at a three dipole array for 2 meters. This was a follow-up to their article in the January/February issue of QEX that featured omnidirectional horizontally polarized antennas. Cebik authored the "Antenna Options" column for QEX.

Former ARRL Senior Assistant Technical Editor Dean Straw, N6BV, and editor of "The ARRL Antenna Book," said: "LB will be greatly missed by the thousands of hams he's helped through his incredibly prolific -- and invariably proficient -- writing about antennas. LB helped me personally in numerous ways while I worked on antenna matters at the League, always communicating with a gentle, scholarly attitude and a real eye for detail. I'm in shock at the news of LB's passing. May his soul rest in peace."

Licensed since 1954, Cebik served as Technical Editor for "antenneX Magazine" <http://www.antennex.com>. According to Jack L. Stone, publisher of antenneX, he had not heard from Cebik for a few days and became worried: "I called the Sheriff in Knoxville to go check on him since I hadn't heard from him in over 5 days, either e-mail or phone, which is highly unusual. The Sheriff [went to Cebik's house to check on him and] called back to tell me the sad, devastating news. As his publisher of books, monthly columns, feature articles and software/models for more than 10 years, we communicated almost daily during that span of time. Not hearing from him for that long was unusual, causing my concern. He was like family to me and was loved and respected by so many."

Cebik maintained a Web site <http://www.cebik.com>, a virtual treasure trove to anyone interested in antennas. Besides a few notes on the history of radio work and other bits that Cebik called "semi-technical oddities," the collection contains information of interest to radio amateurs and professionals interested in antennas, antenna modeling and related subjects, such as antenna tuners and impedance matching. Cebik said that his notes were "geared to helping other radio amateurs and antenna enthusiasts discover what I have managed to uncover over the years -- and then to go well beyond."

His Web site also contains information on antenna modeling. His book, "Basic Antenna Modeling: A Hands-On Tutorial" for Nittany-Scientific's NEC-Win Plus NEC-2 antenna modeling software, contains models in .NEC format for over 150 exercises. "Since the principles in the book apply to any modeling software," Cebik said, "I have also created the same exercise models in the EZNEC format. For more advanced modelers using either NEC-2 or NEC-4, I have prepared an additional volume, "Intermediate Antenna Modeling: A Hands-On Tutorial," based on Nittany-Scientific's NEC-Win Pro and GNEC. The volume includes hundreds of antenna models used in the text to demonstrate virtually the complete command set (along with similarities and differences) used by both cores."

ARRL Contributing Editor H. Ward Silver, N0AX, said, "LB typified generosity. He was always developing material that was published widely. Furthermore, the quality of the articles and concepts was always high, but the writing was such that an audience with a wide range of technical backgrounds could understand it. His Web site is a Solomon's Treasure of solid antenna information -- available to all."

Wolfgang remembered Cebik, saying, "L. B. was an ARRL Technical Advisor, with expertise in antenna modeling and design. I learned that I could count on L. B. to offer clear, concise comments on any submitted article dealing with antennas. He was always a friendly voice on the other end of my phone line when I needed to talk to an expert, and I came to expect a quick e-mailed response to any antenna questions that I sent him. L. B. was so much more than an antenna author, though. He was one of the first ARRL Educational Advisors I ever had the pleasure of working with when I became editor of the ARRL study materials. He played a key role in helping develop the concept of online courses when ARRL began to study the idea of the Continuing Education program <http://www.arrl.org/cce/courses.html>; his Antenna Modeling course has been one of the most popular offerings in the program. L. B. leaves a legacy of friendly advice and Amateur Radio wisdom. I will miss him as a friend and as an advisor."

Cebik's niece, Gina Robeson, also of Knoxville, told the ARRL that her uncle "was amazing to me in a different way than hams viewed him. But he was a legend to me and to the thousands of amateurs whose lives he touched with his work. To me he was my uncle, teacher, friend and confidant. He was a wonderful man, but his family did not really know about the ham side of him."

Robeson said her family spent each Christmas with Cebik and his wife Jean; Jean passed away in 2002 from cancer. "It was always the greatest fun with all the food and family getting together. It did not matter if we were getting together as a group or if it was just me and Uncle Roy, he always had the time to listen and offer advice. He will be sorely missed."

A memorial service for Cebik will be held Sunday, April 27 at 1 PM at Mynatt Funeral Home, 2829 Rennoc Road in Knoxville. Cebik will be cremated and his ashes scattered in his garden, the same place his wife's ashes were scattered. "They will once more be together," Robeson said.

==> WHAT'S COMING UP IN THE MAY/JUNE ISSUE OF QEX

The May/June issue of QEX is out, and it is full of theoretical and practical technical articles that you don't want to miss.

In this issue, James Ahlstrom, N2ADR, describes his software defined radio (SDR) transmitter in "An All-Digital SSB Exciter for HF." Juan Jose de Onate, M0MWA, and Xavier R. Junque de Fortuny present a useful accessory for software defined radios and analog receivers, with "A Software Controlled Radio Preselector." Cornell Drentea, KW7CD, concludes the series on his high performance "Star-10 Transceiver -- Part 3." After presenting schematic diagrams of the rest of the main sub-assemblies, KW7CD describes the outstanding test-lab performance of his radio.

James D. Hagerty, WA1FFL, updates his January 2002 QST project with "An Advanced Direct-Digital VFO." Contributing Editor L. B. Cebik, W4RNL (SK), looks at the physical operation of various antenna "reflectors" in "Antenna Options," and Contributing Editor Raymond Mack, W5IFS, tells about a new source for UHF and microwave semiconductors, unusual local sources for meter fuses and magnet wire, and describes some new Atmel microcontroller design tools in "Out of the Box."

Would you like to write for QEX? It pays $50 per printed page. Be sure to check out the Author's Guide <http://www.arrl.org/qex/#aguide> for more information. If you prefer postal mail, please send a business-size self-addressed, stamped envelope to QEX Author's Guide, c/o Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111-1494.

QEX is edited by Larry Wolfgang, WR1B, and is published six times a year. The subscription rate for ARRL members in the US is $24. For First Class US delivery, the rate is $37 for members, $49 for nonmembers. For international delivery via air mail, including Canada, the subscription rate is $31 for members, $43 for nonmembers. Subscribe to QEX today <http://www.arrl.org/qex>.

==> GET READY FOR THE 2008 HURRICANE SEASON

It's that time of year when preparation for the hurricane season ratchets up -- earlier this month, Orlando, Florida hosted the 30th annual National Hurricane Conference, and state and county Emergency Management Agencies are currently checking plans and assets for the upcoming season. Rick Palm, K1CE, editor of the ARRL's ARES E-Letter, said, "Now is the time for ARES members to assess their portfolio of communications equipment and disaster response knowledge." Hurricane season runs June 1-November 30.

Palm gives several tips for amateurs involved with hurricane operations:

* Monitor major HF hurricane networks during events this season. The Hurricane Watch Net on 14.325 MHz, is one of several key players. It serves either the Atlantic or Pacific during a watch or warning period and coordinates with the National Hurricane Center (NHC) in Miami. Frequent, detailed information is issued on nets when storms pose a threat to the US mainland. In addition to hurricane spotting, local communicators may announce that residents have evacuated from low-lying flood areas. Other amateurs across the country can help by relaying information, keeping the net frequency clear and by listening. See the Hurricane Watch Net's Web site <http://www.hwn.org/> for more information. The net works closely with the hams at the NHC's Amateur Radio station WX4NHC <http://www.wx4nhc.com/>

* The SATERN Net (Salvation Army Team Emergency Radio Network) provides emergency communication support to the Salvation Army and populations at large. They also handle health-and-welfare traffic. SATERN holds high profile nets on 20 meters (14.265 MHz) during major hurricanes and has a long history of excellence, discipline and service. Refer to the SATERN Web site <http://www.satern.org/> for more information.

* The Maritime Mobile Service Net (MMSN) meets on 14.300 MHz and is composed of hams who serve and assist those in need of communications on the high seas. According to its Web site <http://www.mmsn.org/>, the primary purpose of the net is for handling traffic from maritime mobile stations. The network is recognized by the United States Coast Guard and has an excellent working relationship with that agency. The MMSN has handled hundreds of incidents involving vessels in distress and medical emergencies in remote locations, as well as passing health and welfare traffic in and out of affected areas. They also work closely with the NWS and NHC by relaying weather reports from maritime stations.

* The VoIP SKYWARN and Hurricane Net operates by combining both the EchoLink and IRLP linked repeater networks, while handling critical wide area communications during major severe weather and tropical events. These operations have gained national stature in recent years and provide excellent service. Whenever tropical weather is imposing a threat to the US mainland and certain other areas of interest, the VoIP WX-NET will be fully operational. See the VoIP SKYWARN and Hurricane Net Web site <http://www.voipwx.net/> for more information.

Palm said that during hurricane events, there are usually two or three regional nets (usually on 40 or 20 meters) that spring to prominence as major key assets to the disaster response on an ad hoc basis. "Watch for these nets, as well as the nationally recognized networks described above, this season. Don't transmit on their frequencies unless you are absolutely sure you have something substantive to add, and then only under the direction of the net control station," Palm advised.

If you are interested in Emergency Communications, please be sure to check out the monthly ARES E-Letter. You can elect to receive this newsletter via e-mail by going to the Member Data Page <http://www.arrl.org/members-only/memdata.html> on the ARRL Web site.

==>SOLAR UPDATE

Tad "Great is the Sun, and wide he goes" Cook, K7RA, this week reports: This week we had a couple of brief sunspot appearances -- 991 and 992 -- but they were both from Solar Cycle 23 and their emergence was fleeting. On Wednesday, April 23, the planetary A index rose to 32 due to a solar wind and south-pointing Interplanetary Magnetic Field (IMF). Expect geomagnetic conditions to stabilize this weekend, but to again become active on May 2. Sunspot numbers for April 17-23 were 0, 0, 13, 12, 0, 13 and 13 with a mean of 7.3. The 10.7 cm flux was 69.2, 70.2, 71, 70.8, 70.9, 71.3 and 70.7 with a mean of 70.6. Estimated planetary A indices were 8, 6, 5, 4, 4, 5 and 32 with a mean of 9.1. Estimated mid-latitude A indices were 7, 5, 6, 1, 3, 4 and 17, with a mean of 6.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the SP DX RTTY Contest, the Helvetia Contest, the QRP to the Field contest, the Nebraska QSO Party and the Florida QSO Party are all scheduled for April 26-27. The AGCW QRP/QRP Party and the QRP Minimal Art Session are both May 1. Next weekend is the NCCC Sprint Ladder on May 2. On May 3-4, be on the lookout for the MARAC SSB QSO Party, the MARAC CW QSO Party, the 10-10 International Spring Contest (CW), the Microwave Spring Sprint, the 7th Call Area QSO Party, the Portuguese Navy Day Contest, the Indiana QSO Party, the ARI International DX Contest and the New England QSO Party. The RSGB 80 Meter Club Championship (SSB) is May 5. All times listed are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 4, 2008, for these online course sessions beginning on Friday, May 16, 2008: Amateur Radio Emergency Communications Level 2 (EC-002), Amateur Radio Emergency Communications Level 3 (EC-003R2), Antenna Modeling (EC-004), HF Digital Communications (EC-005), VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student

activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Hamvention Traffic Updates: With less than 20 days before the 2008 Dayton Hamvention, there is one small hitch, according to Hamvention organizers: road construction, and lots of it. "One of the main surface streets used by attendees of Hamvention every year is Needmore Road since it is almost a straight shot from I-75 (exit 58) to Hara Arena," said Hamvention Talk-In Chairman Rob Lunsford, KB8UEY. "Unfortunately, a rebuild project has begun on this roadway right in the travel path to Hara; it will be down to one lane each way for during Hamvention." There is also construction at the north end of the Downtown Dayton area (about the 53 to 56 mile markers on Interstate 75), Lunsford said. "In this area, the Ohio Department of Transportation has started a multi-year, multi-phase reconstruction of I-75 in which there are lane restrictions, bridge replacements and various other adjacent projects. These projects are much overdue and will, in the long run, drastically improve travel in the area. Unfortunately, for now we are faced with these projects in high volume areas that are already prone to trouble from even the slightest traffic issue. To assist everyone involved we are asking that those attending Hamvention please try to avoid these areas if possible. Our hope is that if we minimize our traffic in the area, and a problem does occur, we do not make it worse with our increased traffic flow." Lunsford said that individuals traveling on I-70 will not need to make any changes from years past. For more information or if you have questions feel free to contact Lunsford via e-mail <talkin@hamvention.org>. Once in the Dayton area and you find you need assistance, Lunsford advises tuning to 146.940- for further assistance. Directions to Hara Arena can be found on the Dayton Hamvention Web site <http://www.hamvention.org/hv2008/accommodations/directions08.htm>.

* New Section Manager Appointed in New Hampshire: Al Shuman, K1AKS, of New Boston, New Hampshire, has been appointed Section Manager of the New Hampshire Section, effective April 21. ARRL Membership and Volunteer Programs Manager Dave Patton, NN1N, in consultation with New England Division Director Tom Frenaye, K1KI, announced the appointment after Sterling Eanes, AK1K, of Hollis, Section Manager since July 2005, decided to step down due to mounting work responsibilities and other commitments. Shuman served as New Hampshire Section Manager for two previous terms: December 1992-June 1999 and October 2000-June 2005. His term of office continues through June 30, 2009.

* ARRL to Discontinue Web Classifieds: As of April 30, ARRL will cease listing classified ads in Radios On-Line, the classified ad section on the ARRL Web site <http://www.arrl.org/RadiosOnline/>. According to ARRL Chief Operating Officer Harold Kramer, WJ1B, the ARRL has experienced an increased number of complaints by members and users regarding postings and practices that do not conform to the Radios On-Line Web site's original intent: "Despite our efforts to monitor the site regularly, these problems persist. These have included postings for guns and 'personal' ads. Our staff that administers this service has deleted items and notified the 'poster,' only to find the ad back two days later, placed in every category. We are spending a disproportionate amount of staff time dealing with this matter; it is no longer worth the cost of maintaining the service when other online services have been established to handle the specific need for online person-to-person sales."

===

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org
==>ARRL News on the Web: <http://www.arrl.org>
==>ARRL Audio News: <http://www.arrl.org/arrlletter/audio/> or call 860-594-0384

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the

"Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Special Event Station
Members of UKRA will activate the special event station GB5ST from April 31st for 3 days

Activity will be on all bands 160-10 meters and as well as 2 meters.

The group's challenge is to contact as many stations worldwide who have stubbed their toes in the last 5 years during their 3 day event. So if you have or know of someone who has stubbed their toe in the last 5 years call them. QSL via RSCB.

Does falling down and breaking one's shoulder and elbow in two
separate toe-stubbing incidents count?

If so, what frequencies can we find them on?

Amateur Radio Newsline" Report 1603 - May 2, 2008

The following is a closed circuit advisory and not necessarily for air. With a report on Amateur Radio Newsline's finances, heres Andy Jarema, N6TCQ:

--

OK, you all know why I am here. Its spring and all the bills from last winter have been mounting up. And, as usual, there is really not very much left in the treasury to pay them. Eventually they have got to get paid or these news reports will cease. That time is now.

So we ask that you take a few moments to send a donation to the Amateur Radio Newsline support fund so that we can keep these newscasts coming your way. Making a contribution is only a mouse click away if you have Pay Pal. Just go to www.arnewsline.org and click on the button at the top of the page marked "Make Donation." Or you can send in a donation to the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Whichever way you choose, the all volunteer crew at the Amateur Radio Newsline will be eternally grateful and these newscasts will be here for you..

Once again thats the Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066. Or by Pay Pal at www.arnewsline.org

For the Support Fund, Im Andy Jarema, N6TCQ.

--

That ends the closed circuit. Amateur Radio Newsline report number 1603 with a release date of Friday, May 2nd, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Earthquakes swarm Nevada, an appeals court says the ARRL is right and the FCC is wrong on BPL, the DARC returns to Dayton and the results of Newsline's survey on the possible effect of high gas prices on possible hamfest attendance. All this and more on Amateur Radio Newsline" report number 1603 coming your way right now.

(Billboard Cart Here)

RESCUE RADIO: QUAKE STORM HITS THE RENO NEVADA AREA

The area in and around Reno, Nevada, was caught by surprise on Thursday, April 24th. Thats when a magnitude 5 quake hit just before 4 p.m. Mountain Daylight Time.

The U.S. Geological Survey reports that the quake was centered 4 miles west-northwest of Reno. It was followed by a swarm of aftershocks that have rattled nerves and put hams across the region on alert. Amateur Radio Newsline's Don Carlson, KQ6FM, is in Reno with the latest:

--

My wife and I were awakened to the tune of "Shake, Rattle & Roll" as sung by Mother Nature here in Reno. The areas west side near Mogul has been shaking continually with a swarm of small temblors since February 28.

The US Geological survey reported the largest quake at 5.0 struck Friday night April 25 just before Midnight. As Section Emergency Coordinator, I went straight to the radio where we opened an informal net locally. Reports started coming in from all over the area, seems that we woke up almost every ham in town!

With varying intensity, Glenn Thomas, WB6W checked in having felt it as far south as Minden, south of Carson City.

Joe Wolf, WA6RKN, who lived less than 2 miles from the epicenter told us of just about everything on his bookshelves hitting the deck, had a nervous wife and 3 unhappy ferrets, but that his house was in tact!

Then on Monday, a magnitude 4.2 tremor shook the city, followed by numerous aftershocks. No injuries have been reported from the latest in this bizarre two-month swarm of earthquakes.

Scientists say this is unusual because the tremors seem to be getting stronger, instead of weaker. Meanwhile amateur radio ARES members stand ready should a major earthquake strike the area.

Washoe County Emergency Coordinator Bob Miller, WA6MTY told me:

--

Audio only - hear it in the mp3 version of this newscast at www.arnewsline.org

--

But it is good to note that we have a great team of well-trained amateurs on hand should the call come in to help.

In the Shakey-est Little City in the World, Reno Nevada, Im Don Carlson for the Amateur radio newsline.

--

The U.S. Geological Survey says that aftershocks could continue for some time. Hams involved in emergency communications in the vicinity of Reno say that they are prepared. Ironically, the Emcommwest ham radio emergency communications convention takes place at the Circus Circus Hotel in Reno May 2nd through the 4th. Needless to say the Reno quake storm will be a hot topic of discussion at this years event. (ARNewsline")

**

RESCUE RADIO: HAMS TO BE ON FCC EAS PANEL

A follow up to last weeks story on the upcoming E-A-S summit slated for Washington D.C. It now appears as if there will se several hams taking part, They include Panelists Mark Manuelian, KE1AR, of CBS radio, Clay Freinwald, K7CR, of Entercom; and Art Botterell, KD6O, who is the manager of the community warning system for Contra Costa County Sheriffs Office in California.

There will be two discussion groups. The first panel on that day will focus on the state of EAS, especially system breakdowns in the "daisy chain" as well as ways to improve testing protocols. Anther panel will focus on next-generation technologies and explore what policies and protocols should be implemented to ensure compatibility between implementation of the Common Alert Protocol and state government operations. Both discussions will focus on what states need to do to ensure that state, county and local emergency response systems are functional. (RW)

**

RADIO LAW: APPEALS COURT SIDES WITH ARRL IN BPL ISSUE

In case you have not yet heard the news, the US Court of Appeals for the District of Columbia Circuit has sided with the ARRL in its Petition for Review of the FCC's Orders adopting rules governing Broadband over Powerline or BPL systems. The Court agreed with the ARRL on two major points and remanded the rules to the Commission.

Writing for the three-member panel were Circuit Judges Rogers, Tatel and

Kavanaugh, Judge Rogers summarized their position by saying that the Commission failed to satisfy the notice and comment requirements of the Administrative Procedure Act by redacting studies on which it relied in promulgating the rule. Also that it failed to provide a reasoned explanation for its choice of the extrapolation factor for measuring Access BPL emissions. The term redacting means to edit or make changes to.

The Court was not persuaded by the ARRL's arguments on two other points, on which it found that the Commission had acted within its discretion. But the two key points on which the League has won force the FCC to either look again at their rules for the implementation of Access B-P-L or take this court decision into appeal. (ARRL)

**

RADIO LAW: FCC TO PRE ANNOUNCE MEETING VOTE AGENDA

The FCC will begin posting topics to be voted on at its monthly open meeting three weeks in advance. The Communications Act mandates that the commission meet at least monthly. Up until now, the agency has been issuing a notice of its agenda one week before a monthly meeting. The FCC said it would still issue that notice and now also list items slated for a vote on its Web site.

Some commissioners and industry observers had complained of a murky voting process, and a congressional committee has begun a review of the FCCs processes. According to Chairman Kevin Martin, the idea is to make the agencys processes more visible. (RW)

RADIO LAW: FCC SAYS NO TO COMMERCIAL HAM FREQ USE REQUEST

The FCC has told Utah-based Miller Motorsports Park that it cannot use frequencies in the 70 centimeter ham band for business purposes. Miller had requested the use of frequencies in the 448 MHz ham band at 4 watts output. This, for use by 100 mobile for a race event scheduled for May 26th to June 1st.

The application by Miller said that the radios would be used for security, medical and maintenance for the entire event. It claimed that this communications network was vital to the life and safety of the spectators and drivers of this race. It even went so far as to imply that the National Telecommunications and Information Agency had approved the use of thesew 448 MHz channels.

But on Thursday, April 24, ARRL General Counsel Chris Imlay, W3KD, filed an Informal Objection with the FCC regarding a pending application. One day after filing the objection, the FCC agreed with the ARRL, saying that due to the possibility of interference to Amateur operators and also the race teams utilizing the proposed frequencies, it felt that it was not in the public interest to grant the Miller Motorsports Park's request. The FCC also advised Miller Motorsports that if it wished to pursue other

frequencies, that it should coordinate with the National Telecommunications and Information Administration and the American Radio Relay League.

WITH NEWSLINE: PLEASE RE-FILE YOUR 2008 YHOTY NOMINATION

Attention anyone who may have filed a nomination for a youngster for this years Young Ham of the Year Award. If you used the on-line form we did not get it. Nor do we yet know the reason why although we are pretty sure that its software related. Bill Pasternak, WA6ITF, tells us what went wrong and how you can get around the problem:

--

When the new www.yhoty.org website came on line late last year the software to deliver completed forms to us was working fine. In February we opened the nominations for the 2008 award but none came in. Thats not unusual since many folks wait until the last minute to file. Kind of like April 15th when taxes are due.

In fact it was on or at least near April 15th that we began receiving thank-you notes for nominations that should have gone to the sender. Instead they were being e-mailed to the Newsline office but the nominating forms were simply disappearing into cyberspace.

We notified the webmaster of yhoty.org -- Kevin Boudreaux , N5XMH -- and he's working to try to rectify it. In the meantime he suggests that anyone who filed a nomination in past weeks do so again, but not using the on-line form which likely will be off-line by the time you hear this report.

Instead, download and print out the paper form, fill it out and send it to us at the address on the bottom of the page. Or, if you have a scanner, convert it to a file and e-mail it to us at newsline at ix dot netcom dot com.

We apologize for any inconvenience this may cause but we want to be certain that every youngster nominated gets his or her application seen by the judging committee.

So once again. Do not use the on-line nominating form. Download and print out the paper form at www.yhoty.org, fill it out and send it to us at the address on the bottom of the page. Or, convert it to a file and e-mail it to us at newsline at ix dot netcom dot com.

And, as we said earlier -- to those who have already filed using the on-line form, please re-file your nomination again -- on paper or by e-mail. Your original filing was lost in cyberspace by the software glitch and was never received.

For the Amateur Radio Newsline, I'm Bill Paternak, WA6ITF, in Los Angeles.

--

As is always the case, this years nominating period for the Newsline Young Ham of the Year Award ends at midnight Eastern time on May 30 with this years winner to be announced by late June or early July. (ARNewsline")

**

ENFORCEMENT: ANTIQUE RADIO COLLECTOR RECONSIDERATION PETITION DENIED

The FCC has issued a Memorandum Opinion and Order denying a Petition for Reconsideration1 filed by Richard Mann doing business as The Antique Radio Collector. This, seeking reconsideration of a $7000 Forfeiture Order issued by the Spectrum Enforcement Division of the Enforcement Bureau on November 27, 2007.

In its Notice of Apparent Liability the FCC had claimed that the Antique Radio Collector had violated the FCC's rules regarding the marketing of uncertified A-M radio transmitters as far back as 2006. Specifically the S S TRAN model AMT3000.

As previously reported, in its response the Antique Radio Collector claimed that these were really not fully assembled but rather kits that he had put together by Mann at his residence. As such it was not aware of the need for a Commission issued certification authorizing a fully assembled AMT3000 AM transmitter.

But in deny the appeal the FCC says that even transmitters built from kits must be certified before being sold commercially. It says that as a result of its reconsideration of the facts that it finds that neither cancellation nor reduction of the forfeiture is warranted and that the $7000 Forfeiture Order should be affirmed.

The Antique Radio Collector was given the customary 30 days from the April 28th date of issuance of the order to pay or to file a further appeal. (FCC)

**

ENFORCEMENT: FCC FINES BROADCASTER FOR FAILURE TO REDUCE POWER AT DUSK

A licensed broadcaster from Meridian, Mississippi, has been fined $1500. Frank Rackley, Jr. the licensee of Station WNBN-AM was handed the forfeiture for operation of the station from an unauthorized location and operation at a power level in excess of that authorized by the license.

WNBN-AMs station authorization requires it to reduce power from 2.5kW to 330 watts at local sunset time. During the month of January, the local sunset time was 5:15 p.m.. Andon January 14th, an agent from the New Orleans Office monitored station WNBN-AMs signal from 4:45 until 6:00 p.m. and did not observe any change in transmitter power. A few days later, on January 16th agents determined the station was broadcasting from coordinates other than which the station had registered with the FCC.

On February 22nd the New Orleans FCC Office issued a Notice of Apparent Liability for Forfeiture to Frank Rackley Jr.in the amount of $8,000. Rackley submitted a response to the NAL requesting a reduction of the proposed forfeiture. As a result of its review the FCC concluded that a reduction of the proposed forfeiture to $1,500 is warranted, based on demonstrated inability to pay.

Rackley and WNBN A.M. were given the usual 30 daysfrom the April 24th release of the Report amd Order to pay or to file a further appeal. (FCC)

**

ENFORCEMENT: HAM SENTENCED TO 23 MONTHS ON CHILD PORNOGRAPHY POSSESSION CHARGE

A ham has been sentenced to prison time on federal child pornography charges. Sentencing of Kevin Alfred Strom, WB4AIO, took place on Monday, April 21st in Charlottesville Virginia's U.S. District Court. According to the WVIR Television news website, Strom earlier plead guilty to possessing child pornography on his computer.

The judge hearing the case sentenced Strom to 23 months in prison less credit for time already served plus 15 years supervised probation. The WVIR report indicates Strom could be out of prison by years end.

ON THE WEB: THE SOUNDS OF VLF

The sounds of Very Low Frequency radio can now be heard live on the web. This with word that a collection of live natural radio streams of the VLF band from around the world is available at several websites. Here's a few seconds from a web based receiver in Sheffield in the U-K:

--

Actual web audio

--

The entire list of Very Low Frequency web accessible receivers is far to long to include here. You will find more in this weeks printed Amateur Radio Newsline report. (Via e-mail)

**

HAM RADIO ON THE WEB: WWW.NH7C.COM OFFERING FREE HAM CLASSIFIEDS

Two weeks ago the ARRL announced that it was dropping its ham radio classified ads from its website. Now, cones the Amateur Radio Social Network that says it welcomes those wanting to post such ads on its NH7C.com cyberspace home.

The Amateur Radio Social Network says that it created NH7C.com with the user in mind and sports many of the latest features available. The latest addition is classified ads that are free as is membership in the group itself

But NH7C.com is not the only site looking for your classified ads. Another is hamads.com also known as www dot qth dot com . That site has been offering free ham radio related classified ads for several years. (KC5FM)

**

HAM BUSINESS: N5WEB BUYS FORCE 12 ANTENNAS

Mark Hooper, N5WEB is the new owner of Force 12, Inc. antennas and towers. He will be manufacturing the product line in Bridgeport, Texas which is located near the Dallas Fort Worth area.

Introducing himself on the Force 12 website, Hooper says that he built his first radio from a schematic at the age of 10. He received his Novice license and built is own transmitter at the age of 15. Hooper ays that it was these interests that ultimately led him to a career in electronics as an engineer, much of it supporting manufacturing operations for both large and small companies.

Hooper says that he is looking forward to using his expertise and 20 plus years experience in manufacturing to build the best antenna products on the market. He says that he and his staff look forward to hearing from you. That it is their goal to provide excellent customer service and support for your antenna needs in the coming years.

Hooper says to call or e mail and let us know how we can best be of service. Contact information is on the Force 12 website at /www.force12inc.com (Force 12 Release)

THE SOCIAL SCENE: DARC RETURNING TO DAYTON

After several years of absence the Germany's national ham radio society, the Deutscher Amateur Radio Club will again be at the Dayton Hamvention.

Better known world-wide simply as the DARC, the Deutscher Amateur Radio Club will be represented at Hamvention by Joerg Jaehrig, DJ3HW, who is its IARU Liaison Officer. Also on hand to answer questions regarding ham radio in Germany will be Dennis Haertig, DL7RBI, who is the D-A-R-C Secretary of International Affairs. The two will be bringing with them a 15 minute video presentation titled "60 years of WAE Award" that will be presented in the ARRL sponsored movie room.

Information on the participation in Hamvention by the Deutscher Amateur Radio Club in German can be found on-line at www.darc.de. More on what's planned for this years Dayton gathering is on line at the Hamvention website. Its in cyberspace at www.hamvention.org

(DARC)

**

NEWSLINE SURVEY RESULTS: GAS PRICES VS. POSSIBLE HAMFEST ATTENDENCE

As the spring and summer ham radio convention season approaches, we have the results of our month-long on-line survey that asks how high the price of a gallon of gas has to go before you decide not to go. And there were some surprises.

We structured the response table starting at $3.75 a gallon which was just below the maximum cost anywhere when the survey began and increased it in 25 cent increments all the way up to $5 a gallon. The latter being a figure nobody thought possible a month ago, but one now being bandied about by some involved in petroleum futures.

That aside, what dd our listeners say? A clear majority, some 42 percent put their limit at the $3.75 a gallon point. But a surprising 23.6 percent said that they would be willing to spring for $5 a gallon to spend hamfest time with their buddies and friends. 18 percent said that $4 a gallon was all that they were willing to spend while the rest was spread out from $3.35 to $3.75.

So how will these numbers translate into actual hamfest attendance? Well only the next two to three months of watching the gate numbers will tell for sure. But Emcommwest in Reno this weekend and the upcoming Dayton Hamvention in Ohio on May 16, 17, and 18 should both be good indicators of how much of an impact high fuel prices are having on your personal ham radio convention presence this year. WORLDBEAT - JAPAN: HAMS GET EXPANDED 80 METER PRIVELEGES

Some good news for hams in Japan. As of Monday April 28th, Radio Amateurs in that nation have been given access to additional frequencies in the 80 meter band oa a co-primary shared basis. As a result of this action, Japanese amateurs are now allowed to operate 3599 to 3612 kHz, 3 680 to 3687 kHz, 3702 to 3716 kHz, 3745 to 3747 kHz and 3754 to 3770 kHz. This is in addition to all subbands that they were previously allowed to use. Japan's Ministry of Internal Affairs and Communications made a public announcement that the domestic Table of Frequency Allocations and the Japanese Amateur Bandplan had been amended to reflect this change. (Southgate)

**

WORLDBEAT - BRUNEI: ON THE AIR ONCE AGAIN

The Brunei Darussalam Amateur Radio Association has announced that it will be back on air. At a recent press conference held at R-A-C Technologies the groups president announced that the association, which has been inactive for six years, will be holding its reactivation ceremony on Sunday, May 4th at the h National Stadium. Amateur Radio in Brunei really got started in the late 1970's by a number of local hams who formed the Askar Muda radio club. In 1999, the 27th SEANET Convention was successfully held in Brunei. (Borneo Bulletin On-Line)

**

ON THE AIR: MUSEUM SHIPS WEEKEND

On the air, the 2008 Museum Ships Event will be sponsored by The Battleship New Jersey Amateur Radio Station will take place during the period of on June 7th from 0001 to 2359z on June 8th. Ships wishing to participate should send a note to museum@nj2bb.org with the name of ship, callsign, location, QSL information and contact information for person responsible. During this event there is participation of naval ships, lightships, steamships, research vessels and merchant ships. A list of participating ships is available at www.nj2bb.org (Press release)

**

DX

In D-X. listen out for Croatian special event station 9A08P which will be active through December 31st. This operation is to celebrate the City of Djurdjevac using all bands and modes. A special QSL card will be issued with the complete story on it. All QSO's will be confirmed automatically via the bureau.

And OZ1TL, is expected to be active from Bhutan as A52TL during his stay to attend some of the inauguration ceremonies of the nations new king. Activity will be mainly on CW on most bands including 160, 80 and 40 meters. QSL via his home callsign.

Lastly, for those of you who operate 50 MHz and above, word that HB9HLM, will be active as CN2DX from grid IM63BM in Monaco between July 26th and August 8th. He will have 100 watts on 6 meters and 500 watts on 2. A pair of 7 elements yagi's will be the 2 meter antenna, QSL via EA7FTR.

(Above from various DX news sources)

**

THAT FINAL ITEM: AN SDR RECEIVER ON THE WWW

And finally this week, a kind of rhetorical question. What does a web based software defined radio sound like and what will it do? Well here's part of the answer. Take a listen:

--

Actual web audio

--

Thats audio from the latest web-based software defined or S-D-R radio located at the University of Twente's amateur radio club in the Netherlands. The system allows visitors to tune over parts of either the 40 or 80 meter bands. When we tuned in 80 was dead but there was activity on 40:

--

Actual web audio

--

What makes this system different from other web-based receivers is, that thanks to the use of Software-Defined Radio technology, this receiver can be tuned simultaneously by multiple users. And when tuning around a band, you can either enter a frequency directly, or click-drag on the frequency scale. Bandwidth can also be controlled, either by the button options, or by click-dragging on the passband edges of the frequency scale. Listen again:

--

Actual web audio

--

The web page also features a log book, a list of connected users and a chat facility. Additional bands are planned for the future. Its all available to experiment with on line at http://websdr.ewi.utwente.nl:8901/

(Southgate)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline". Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's" only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline", P.O. Box 660937, Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both a downloadable nominating form is in cyberspace at www dot YHOTY dot org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, Im Jim Damron, N8TMW, saying 73 and we thank you for listening.

OM,

They don't really mean "toe". They don't really mean "stub".

Wink, nudge.

==> FCC DENIES UTAH MOTORSPORT PARK USE OF AMATEUR RADIO FREQUENCIES

On Thursday, April 24, ARRL General Counsel Chris Imlay, W3KD, filed an Informal Objection with the FCC regarding a pending application for a Special Temporary Authority (STA) filed by Miller Motorsports Park in Tooele, Utah. One day after filing the Objection, the FCC agreed with the ARRL, saying, "Due to the possibility of interference to Amateur operators and also the race teams utilizing the proposed frequencies, we feel that it is not in the public interest to grant [Miller Motorsports Park's] request."

The FCC also advised Miller Motorsports that if they "wish[ed] to pursue other frequencies, [they] should coordinate with the ARRL and National Telecommunications and Information Administration (NTIA)."

Miller Motorsports requested the use of frequencies 448.525, 448.650, 448.060, 448.290 and 448.610 MHz at 4 W ERP. They proposed to use 100 mobile units on each of these and other channels at or above 450 MHz for a race event scheduled May 26-June 1, 2008. The application filed by Miller Motorsports stated that the radios would be used for "security, medical and maintenance for the entire event" and that communications service is "vital to the life and safety of the spectators and drivers of this race event." Miller Motorsports also implied that the NTIA had approved the use of the 448 MHz channels.

The League's Informal Objection pointed out that "Amateur Radio Service licensees make extremely heavy use of the band 420-450 MHz, and especially the segment 440-450 MHz for FM voice repeaters. There are repeater stations in Salt Lake City, of which Tooele is a close-in suburb, using frequencies throughout the 448 MHz range for outputs, including 448.525, 448.625, 448.050 and 448.075 MHz. In addition, there are repeater outputs in other areas of the greater Salt Lake City area which are in regular operation at all times of the day or night, and radio amateurs using mobile stations would be predictably interfered with by operation as proposed in the STA."

The Objection also stated that there was the possibility that some of the spectators at Miller Motorsports Park, or otherwise in the area, might be Amateur Radio operators who might be operating using their portable transceivers "on the precise channels sought by the STA."

The ARRL called the Miller Motorsports Park choice of channels "completely inappropriate. The radio amateurs who are licensed to use these frequencies are under no obligation to either tolerate interference or to cease their own operation, regardless of the interference that might be suffered at any time" by Miller Motorsports.

While the FCC has issued STAs on the amateur allocations from time to time, the ARRL wrote, "many, perhaps a majority, are of no concern to the ARRL due to the choice of frequency band, duty cycle or power level proposed," what Miller Motorsports is requesting is "a completely incompatible and inappropriate use of Amateur Radio allocations." Citing "harmful interference to and from the Amateur Radio Service on channels in the 448 MHz band," the ARRL requested that the FCC deny Miller Motorsports' STA application.

==> NEWSPAPER REPORTS "BPL PLAN IS DEAD IN DALLAS"

The Dallas Morning News has reported that "an ambitious plan for using power lines to deliver fast Internet service to 2 million Dallas-area homes collapsed Thursday." Current Group, LLC has announced plans to sell its Dallas BPL network to Oncor, a regulated electric distribution and transmission business, for $90 million. Oncor reportedly has no plans to offer Internet service but will use the network to detect distribution network issues <http://www.dallasnews.com/sharedcontent/dws/bus/stories/DN-current_02bus.ART.State.Edition1.460d413.html>. While Current originally touted the network as a way to offer Internet service to consumers and had entered into a marketing arrangement with DirecTV, the Houston Chronicle quotes Oncor spokesman Chris Schein as confirming that Oncor will use the network only for monitoring the power grid: "Our business is delivering electricity, not being an Internet provider or a television provider." <http://www.chron.com/disp/story.mpl/ap/business/5747397.html>

ARRL Chief Executive Officer David Sumner, K1ZZ, observed that "This announcement underscores yet again that the Bush Administration made a fundamental error in judgment when it erroneously identified BPL as a potential 'third wire' delivering broadband to consumers. As the Court of Appeals for the DC Circuit determined last week <http://www.arrl.org/news/stories/2008/04/25/10064/?nc=1>, the FCC then compounded the error by 'cherry-picking' from its staff studies and ignoring other studies that proved the FCC was underestimating the interference potential of BPL systems. One can only hope that this latest marketplace failure of BPL will send a clear message that the answer to expanding consumer broadband access lies with other, more promising technologies that do not have such a potential to pollute the radio spectrum."

ARRL Laboratory Manager Ed Hare, W1RFI, was quick to point out that BPL was not going away in Dallas. According to Oncor Vice President Jim Greer, Oncor will use the BPL network to spot grid problems to detect large power outages before they affect customers. Oncor will not offer Internet service through the system as Current had originally planned when they built it.

The ARRL has no issues with BPL as long as it does not cause harmful interference to the amateur bands. Current's Dallas system is a good example of that, Hare said, as it is "notched" so as not to interfere with the Amateur Radio Service: "The Current system in Dallas is probably not causing interference to ham radio. Their equipment doesn't use the ham bands. It is also quiet except when in use. For meter reading and other utility applications, nearby modems may make the occasional short burst of noise, but not the cacophony of sound we hear with some other systems. You would probably be able to tell that BPL is there if you tune outside the ham bands. From an EMC perspective, what is needed now to complete this progress are regulations and standards that match BPL's most successful models."

DirecTV customers who get Internet service through Current's network will probably lose service when the deal goes through. "Oncor is not in the telecommunications business, and it has no plans to get into the telecommunications business," said Schein.

Dallas and Houston are the only metropolitan areas in Texas with BPL. In the past, the City of Austin looked at incorporating a BPL system in their community, but decided not to do so. In a report <http://p1k.arrl.org/~ehare/bpl/COAAE_BPL_Final_Report.pdf> on how the BPL trial it undertook worked for them, the City of Austin summarized its reasons for that decision.

==> EIGHT TORNADOES RAVAGE EASTERN VIRGINIA

When tornadoes swept across the state of Virginia on Monday, April 28, local Amateur Radio operators responded to the call for assistance. According to Ken Murphy, KI4GEM, Assistant Emergency Coordinator for Portsmouth, an EF3 tornado touched down in Suffolk, Virginia around 4 PM local time, plowing its way east into Norfolk, damaging scores of homes, stores and cars and downing dozens of trees and power lines; Suffolk is about 20 miles from Norfolk, Virginia. Soon after the tornadoes touched down, Virginia Governor Timothy M. Kaine declared a State of Emergency and directed state agencies to take all necessary actions to aid in the response to widespread damage from the severe weather. About 140 homes were destroyed, damaged or deemed uninhabitable.

The National Weather Service (NWS) confirmed eight tornadoes in Virginia: City of Suffolk (strong EF3), City of Colonial Heights (EF1), Brunswick County (EF1), Gloucester County (EF0), Mathews County (EF0), Halifax County (EF1), Surry County (EF1) and Isle of Wight County (EF1).

"The tornado produced severe damage to many structures, downed large trees, and destroyed power lines. Approximately 200 injuries were reported and several homes and businesses were destroyed. There were no fatalities," Murphy said. Upon spotting the tornado, Murphy placed a call on the Portsmouth repeater, asking for someone to notify the National Weather Service and the local EMS. A SKYWARN net was activated on another repeater; Portsmouth Emergency Coordinator Dave Livingston, K5SFM, and Bill Farmer, KI4GWC, served as Net control.

"This was an unusual activation in that an ARES AEC from one locality -- Portsmouth -- would not normally be on the scene of a tornado touching down in another locality -- Suffolk," said ARRL Virginia Section Manager Carl Clements, W4CAC. "Murphy requested that NWS be notified of the tornado and that the fire department and emergency teams be notified so they could respond. The Deputy Fire Chief of the Driver Volunteer Fire Department (who was the on-scene commander at the time) was concerned about the number of onlookers entering the disaster area. There were many power lines down and trees in the roadway and on buildings, as well as damaged natural gas mains. Some buildings were gone leaving a massive debris field."

The Driver VFD Chief requested that ARES activate in order to assist the local teams; 10 members of the Portsmouth ARES group responded. "The Chief had Murphy assign hams to the roadblocks at the major intersections to assist the police on the scene with traffic and crowd control. We also kept the Chief informed of the locations of other reported funnel clouds. At one point, the Fire Chief on the scene was advised that one of the team members was tracking the rapidly moving weather still in the area with the help of APRS," Clements said.

A spokesperson for the City of Suffolk said the area around Sentara Obici Hospital in Driver (a community within Suffolk) was hardest hit. The hospital was damaged but still able to treat patients. A spokesperson for the hospital said about 60 injured people were being treated there, and he expected most to be released. "We have lots of cuts and bruises and arm and leg injuries," he said.

Clements said that no further assistance from ARES has been requested. "All local police, fire, and EMS communications are intact and functioning. As in any disaster, the Emergency Management Officials are asking that unless you have a specific assignment from an on-scene agency (Red Cross, Salvation Army, official search and rescue teams and the like), please do not just show up at the stricken areas to offer assistance."

==> SPRING 2008 W1AW FREQUENCY MEASURING TEST SCHEDULED THIS MONTH

Capitalizing on the popular and effective automated online results reporting system developed by Bruce Horn, WA7BNM, for the Frequency Measuring Test (FMT) <http://www.arrl.org/w1aw/fmt/> in November 2007, W1AW will conduct a spring FMT. This FMT will begin on Wednesday, May 21 at 9:45 PM (EDT) (that's the same as 0145 UTC on May 22), replacing W1AW's normally scheduled phone bulletin. W1AW Station Manager Joe Carcia, NJ1Q, recommends that those planning to participate should listen to W1AW's transmissions prior to the event to determine which band -- or bands -- will be best for measurement purposes.

In this edition of the FMT, listeners will be asked to measure the frequency of an audio tone, given an exact frequency for the carrier signal. The tone will be between 1000-2500 Hz. The carrier frequencies will be 3990 kHz (LSB), 7290 kHz (LSB), 14290 kHz (USB) and 18160 kHz (USB).

Measuring audio frequencies of a modulated signal is a useful skill for those interested in digital modes. Proper tuning of these signals is important to obtain the highest quality performance. For non-digital users, it is also important to understand the relationship between the frequencies of the modulated signal's sidebands and its carrier. The techniques for measuring a modulating tone are described in the November 2004 QST in an article <http://www.arrl.org/w1aw/fmt/2004/04fmtsilver.pdf> on the Frequency Measuring Test by H. Ward Silver, N0AX. The FMT Web page <http://www.arrl.org/w1aw/fmt/> also has several interesting articles about measuring on-the-air signal frequencies.

The FMT will start with a general QST call from W1AW at exactly 0145 UTC, transmitted simultaneously on the frequencies listed above. The test will consist of three 60-second key down transmissions for each band, followed by a station identification. The test will last for approximately 15 minutes and will end with station identification. W1AW will identify before, during and after the transmissions. There are no plans at this time for a West Coast station.

As in the November 2007 FMT, your report should be submitted via the FMT Report form on the W1AW FMT Web site <http://www.arrl.org/w1aw/fmt/>. Along with your call sign and e-mail address, enter your most accurate measurement on each band. There will be a window to list your equipment, describe the method you used to make the measurements and enter any Soapbox comments. Participants have 14 days to input their data. Participants may input their data more than once, although the final entry will be the one used for the results. W1AW will post the transmitted frequencies on the FMT Web site following the test. This will allow participants to quickly determine the accuracy of their equipment and methods. A complete package of results will be available via the FMT Web site after the 14-day reporting period is concluded. The results from the November 2007 FMT are available on the 2007 FMT Results Web site <http://www.b4h.net/fmt/fmtresults.php>.

==> ARRL CARD CHECKING AT DAYTON HAMVENTION

DXCC staff and volunteers will be checking cards at the 2008 Dayton Hamvention during all hours of operation on Friday, Saturday and Sunday. The Dayton Hamvention is May 16-18 at the Hara Arena in Dayton, Ohio. ARRL DXCC Manager Bill Moore, NC1L, said, "Many hams travel from all over the world to attend Hamvention, so card checkers are especially busy." Card checkers will be checking cards for the following ARRL awards: DXCC, Worked All States (WAS), VHF/UHF Century Club (VUCC) and Worked All Continents (WAC). In order to help applicants and the card checkers through the process to avoid delays and allow the checkers to serve everyone, Moore offers the following tips:

Preparation
* There is a 120 card limit per applicant.
* Make sure that cards are in proper order -- band first, then mode. Applicants should place cards with multiple QSOs at the end.
* The order on the record sheet must match the order of the cards. The latest forms are on the DXCC Web site <http://www.arrl.org/awards/dxcc/>.
* Have all paperwork completed before coming to the table, and make sure everything is legible.

* List only those QSOs for which you want credit.
* Applicants planning to do a hybrid application (paper application with Logbook of The World) should do the LoTW portion just prior to leaving for Dayton.

Upon Arrival
* Take a number.
* Stay in line.
* Notify the card checker of anything important before they start checking cards. The card checker, upon finishing checking the cards, will review any problem(s) with the applicant.
* Stay with the card checker until completion.
* Vendors may drop off their application to a checker and return later for pickup.

Upon Completion
* The card checker will return your cards to you; DXCC staff will not keep any cards.
* The card checker will advise applicants of the final fees upon completion of the application.
* Payment is due upon completion of your application. Applicants may pay for their award in the following ways: Credit Card or Cash (US or Euro only), Check (from USA bank only), Money Order (US or International). DXCC will not bill applicants.
* For the latest fee information, please see DXCC Rule 15 <http://www.arrl.org/awards/dxcc/rules.html>.

Moore advises that, if possible, applicants should bring a copy of their last credit slip. "Remember," Moore said, "if you are doing a hybrid application -- LoTW plus cards -- be sure you do the LoTW element prior to leaving for Hamvention."

If you have questions concerning the DXCC program, please contact DXCC desk via e-mail <dxcc@arrl.org>.

==> TEN NEW SATELLITES IN ORBIT

Ten satellites reached orbit April 28 aboard an Indian PSLV-C9 rocket launched from the Satish Dhawan Space Center. The primary payloads were India's CARTOSAT-2A and IMS-1 satellites. In addition to the NLS-5 and RUBIN-8 satellites, the rocket carried six CubeSat <http://www.cubesat.org/> research satellites, all of which communicate using Amateur Radio frequencies. All spacecraft deployed normally and appear to be functional at this time.

The SEEDS satellite was designed and built by students at Japan's Nihon University. When fully operational, SEEDS will download telemetry in Morse code and 1200-baud FM AFSK packet radio at 437.485 MHz. The satellite also has Slow-Scan TV (SSTV) capability. Several stations have reported receiving SEEDS CW telemetry and the team would appreciate receiving more reports from amateurs at their ground station Web page <http://sat.aero.cst.nihon-u.ac.jp/gs/english/cardform_e.html>.

AAUSAT-II <http://aausatii.space.aau.dk/eng/> is the creation of a student team at Aalborg University in Denmark. It will downlink scientific telemetry at 437.425 MHz using 1200 or 9600-baud packet.

Can-X2 <http://www.utias-sfl.net/nanosatellites/CanX2/> is a product of students at the University of Toronto Institute for Aerospace Studies, Space Flight Laboratory (UTIAS/SFL). Can-X2 will downlink telemetry at 437.478 MHz using 4 kbps GFSK, but the downlink will be active only when the satellite is within range of the Toronto ground station.

Compass-One <http://www.cubesat.de/> was designed and built by students at Aachen University of Applied Sciences in Germany. The satellite features a Morse code telemetry beacon at 437.275 MHz. Compass-1 will also provide a packet radio data downlink, which will include image data, at 437.405 MHz.

Cute 1.7 + APDII <http://lss.mes.titech.ac.jp/ssp/cute1.7/index_e.html> is a satellite created by students at the Tokyo Institute of Technology. This satellite will not only provide telemetry, it will also offer a 9600-baud packet store-and-forward message relay with an uplink at 1267.6 MHz and a downlink at 437.475 MHz.

Delfi-C3 <http://www.delfic3.nl/> was designed and built by students at Delft University of Technology in the Netherlands. It includes an SSB/CW linear transponder. The satellite will be in telemetry-only mode for the first three months of the mission, after which it will be switched to transponder mode. Delfi-C3 downlinks 1200-baud packet telemetry at 145.870 MHz. The linear transponder, when activated, will have an uplink passband from 435.530 to 435.570 MHz and a corresponding downlink passband from 145.880 to 145.920 MHz.

==>SOLAR UPDATE

Tad "To dazzle when the Sun is down, and rob the world of rest" Cook, K7RA, this week reports: For several weeks we expected today, May 2, to have active geomagnetic conditions. For instance, if you look at a forecast from April 23, it shows an expected planetary A index for May 1-3 of 10, 20 and 15. The next day, April 24, this changed to 8, 20 and 15, and on April 25 it was 10, 15 and 15. For May 1, we see the actual planetary A index for that day was 9, and for the following two days, the predicted values are 10 and 12, which are much more moderate. So obviously as we moved closer to this date, the return of a solar wind stream seemed less likely, although earlier today the planetary K index rose as high as 4, indicating unsettled to active geomagnetic conditions. Sunspot numbers for April 24-30 were 11, 0, 0, 0, 0, 0 and 0 with a mean of 1.6. The 10.7 cm flux was 70.4, 69.8, 69, 68.1, 68.5, 68.6 and 67 with a mean of 68.8. Estimated planetary A indices were 18, 8, 10, 10, 11, 8 and 9 with a mean of 10.6. Estimated mid-latitude A indices were 13, 7, 5, 7, 9, 4 and 4, with a mean of 7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint Ladder is on May 2. On May 3-4, be on the lookout for the MARAC SSB QSO Party, the MARAC CW QSO Party, the 10-10 International Spring Contest (CW), the Microwave Spring Sprint, the 7th Call Area QSO Party, the Portuguese Navy Day Contest, the Indiana QSO Party, the ARI International DX Contest and the New England QSO Party. The RSGB 80 Meter Club Championship (SSB) is May 5. Next weekend, the NCCC Sprint Ladder is May 9 and the Nevada Mustang Roundup is May 9-10. The VK/Trans-Tasman 80 Meter Contest (Phone) and the FISTS Spring Sprint are both on May 10. Be sure to check out the SBMS 2 GHz and Up WW Club Contest, the EUCW Fraternizing CW QSO Party, the CQ-M International DX Contest, the VOLTA WW RTTY Contest and the 50 MHz Spring Sprint on May 10-11. The SKCC Weekend Sprintathon is on May 11 and the RSGB 80 Meter Club Championship (Data) is on May 14. All dates listed are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 25, 2008, for these online course sessions beginning on Friday, June 6, 2008: Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Japanese Amateurs Receive More Privileges on 75/80 Meters: Japan's Ministry of Internal Affairs and Communications (MIC) announced that Japan's Table of Frequency Allocations and the Japanese Amateur Bandplan <http://www.jarl.or.jp/English/6_Band_Plan/JAbandplan.pdf> have been amended, giving amateurs in that country more privileges on certain frequency blocks in the 75/80 meter band. Japanese amateurs are now allowed to operate the following additional frequencies on the 75/80

meters: 3.599-3.612 MHz, 3.680 to 3.687 MHz, 3.702-3.716 MHz, 3.745-3.747 MHz and 3.754-3.770 MHz. As of April 28, 2008, Japanese amateurs will have privileges on the following frequencies in the 75/80 meter band: 3.500-3.520 MHz (CW only), 3.520-3.525 MHz (Digital Mode and CW), 3.525-3.575 MHz (CW and Phone), 3.599-3.612 MHz (CW and Phone), 3.680-3.687 MHz (CW and Phone), 3.702-3.716 MHz (CW and Phone), 3.745-3.770 MHz (CW and Phone) and 3.791-3.805 MHz (CW and Phone). "This makes it a bit easier for US amateurs to make contacts with Japanese amateurs, especially in contests, since Japan does not have phone privileges on the 160 meter band," said ARRL Membership Services Manager Dave Patton, NN1N. "These new privileges will also make it easier for DXpeditions to work Japan." -- Information provided by JARL <http://www.jarl.or.jp/English/>

* VoIP Hurricane Net Looking to Recruit Net Control Operators: The VoIP Hurricane Net <http://www.voipwx.net/> is looking for Net Control Operators (NCOs) to assist with its weekly Hurricane Preparation Net and during Hurricane Net activations. The VoIP Hurricane Net, created in 2002, is a support net working with WX4NHC <http://www.fiu.edu/orgs/w4ehw/>, the Amateur Radio station at the National Hurricane Center (NHC). The VoIP Net Management team is looking for NCOs from any geographic area to maintain a net for as long as emergency communications are required before, during and shortly after hurricanes; this could be up to 24 hours a day and sometimes for several days. Net Control Operators from the Pacific, Asia, Australia/New Zealand and other international areas can play a critical role in assisting net operations during the overnight hours of a North American activation during their local daytime, providing North American NCOs rest during their normal overnight hours. Fluent Spanish speakers are also encouraged to apply to become NCOs in order to further support operations in South and Central America, Mexico and Puerto Rico. The VoIP Net Management team will be offering NCO training in the coming weeks. If you're interested in becoming an NCO, please contact Director of VoIP Hurricane Net Operations Rob Macedo, KD1CY <rmacedo@rcn.com>, or VoIP Hurricane Net Weekly and Activation Net Control Scheduler Jim Palmer, KB1KQW <kb1kqw@voipwx.net>. -- Information provided by VoIP Hurricane Net

* No ARRL Audio News on May 16: There will be no ARRL Audio News on Friday, May 16. The ARRL Letter will be released on that day. ARRL Audio News will return on Friday, May 23.

* Notes from the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, reports that the 2006 and 2007 YA/LY1Y operations in Afghanistan have been approved for DXCC credit. "If you had cards rejected for this operation, please send an e-mail <dxcc@arrl.org> to the ARRL DXCC Desk to have your DXCC record updated," Moore said.

===

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

```

Just perusing the ARRL letter on rec.radio.info and the lead story was very interesting. It's about the ARRL objecting to the use of some 70cm frequencies for a commercial event.

This paragraph in particular caught my eye:

>"The ARRL called the Miller Motorsports Park choice of
>channels 'completely inappropriate. The radio amateurs who
>are licensed to use these frequencies are under no obligation
>to either tolerate interference or to cease their own operation,
>regardless of the interference that might be suffered at any
>time' by Miller Motorsports."

Just goes to show how things are different in the US to here in the UK. Over here we are only secondary users of the 70cm band (the primary user of just about everything above 2m is the Ministry of Defence) and so we have to put up with anything and everything, including car alarm keyfobs on 433.92 MHz as an example. We also only get 430-440 MHz rather than your 420-450.

Even in the 2m band (144-146 not 144-148 MHz..!), of which we are primary users,we cannot claim protection from interference.

Ah well..!

73 Ivor G6URP

If I recall properly we're secondary to the military in that band as well. Indeed, 70cm repeater operators are learning that the hard way... as many repeaters are having to reduce power or even go QRT at the request of our military, to protect a radar system.

But the motorsports folks have no regular authority in that band at all.

I'm not sure I understand why they thought they needed amateur spectrum for that project.

The Pave/Paws system that is pushing some repeaters off 70cm predates the complaints by several decades, and I take the military's new attitude to be another nail in the coffin of ham radio's former "favorite son" status at the Pentagon.

It used to be that we hams were a corps of operators who could be pressed into service quickly during a war or other crisis. Now, with Morse as deeply buried as its creators and military electronics too secret to be entrusted to soldiers and sailors who haven't been vetted for security clearances, we're yesterday's news in the E ring.

We'll have to find another reason to justify the allocations we enjoy. It's going to be hard work, and not nearly as easy as learning Morse (not that that would help now). We're going to have to get better - in fact, much better - at public relations: the Red Cross and other disaster relief agencies have known the importance of image all along, but now hams have got to get in the game and advertise ourselves as an anlternative to traditional communications during hurricanes, floods, earthquakes, etc.

Of course we've had this debate before. Older hams such as I feel that we followed the program and did what was expected of us, and now I resend being pushed aside in favor of a Federal Emergency Management Agency which is, to my jaundiced eye, proficient only at promising what others will have to deliver and claiming credit for what others have done. It's a cold, cruel world, and we must get better at telling the public and the their elected officials how much we do.

Bill

Anyone with some level of technical knowledge might wonder why a
billion dollar (boondoggle) "radar system" can't discriminate between
a fixed, known "target" (like a repeater)and one that is moving, comes
from over the horizon which might be something nasty?

Sounds like some real shoddy engineering took place at taxpayer
expense. I can think of 3 or 4 ways to remove false targets w/o
loosing any system level accuracy or sensitivity. In fact, didn't
they perfect that during the cold war?

Gee... Thinking about it some. All Abdulah (or Ivan or whoever)
needs to do is buy a 440 rig, an amp and a yagi and go out as a
"rover"; 3 or 4 kW ERP down the bear's craw for a while then move.

Sigh....

Take a look at this month's issue of CQ for a possible explanation of the problem.

To sum it up briefly: PAVE PAWS is a phased-array radar system, with a large number of individual turnstile antennas on each side. During reception, the signals picked up by the various individual antennas are combined electrically/electronically, in ways which cause them to mix in-pase for signals coming from the desired direction and out-of-phase for other directions.

Older-generation phased array antenna systems perform the phase shifting by switching individual phase shifters (delay lines or similar) in series with the feedlines from the individual antennas. The delayed signals are then combined and detected. If you want to point the beam in a different direction, you change all of the phase-shifter delays.

The newer generation of phased-array radar systems actually digitizes the incoming signal at each antenna, and then does the linear mixing (addition/subtraction) entirely in the digital domain.

Why the change? I gather that it allows for both a finer degree of control of the delays (allowing higher resolution in beam-pointing), and also allows multiple different delay-and-combine operations to be performed in parallel (just add banks of DSPs), allowing one to track multiple targets simultanously.

The disadvantage of this new system (as stated in CQ): it has rather less ability to reject off-axis signals than the older delay-line method of phasing. In the delay-line system, off-axis interference would tend mix out-of-phase *before* it was detected, and would largely cancel out. In the new system, *every* individual antenna and digitizer receives the interfering signal at full strength - there's no phase cancellation in the analog domain.

This would leave the newer systems at a significant disadvantage with regard to saturation and desensitization by strong off-axis signals. It's not so much a question of false targets appearing, I think, but a question of the system losing the ability to detect the real targets. The digigal method of doing phase-shifting and beamforming is faster and more precise than the switched-analog method, but apparently somewhat less robust in this regard.

As Scotty said, "The more complicated they make the plumbing, the easier it is to plug up the drains."

Even weather radar can do that with drops of water. :-)

If I was trying to do real-time analysis of such weak signals with the

goal of protecting the nation, I'd take advantage of every technical
and legal option available to me to limit or remove the potential for
interference from very strong local signal sources.

Do you also object to the "National Radio Quiet Zone" in West
Virginia?

Bill Horne wrote on Sat 3 May 2008 under the thread 'Discussions' in RRAM:

>The Pave/Paws system that is pushing some repeaters off 70cm predates
>the complaints by several decades, and I take the military's new
>attitude to be another nail in the coffin of ham radio's former
>"favorite son" status at the Pentagon.

As a veteran of the US Army Signal Corps 1952 to 1960 and as an engineer who has been involved in DoD electronics during my civilian career, I've seen NO evidence that US amateur radio was ever in some "favorite son" status in the US military.

>It used to be that we hams were a corps of operators who could be
>pressed into service quickly during a war or other crisis.

Perhaps this was true in 1941. It was NOT true in 1952 when I voluntarily entered US Army service (during the Korean War active phase), trained at the Signal School at Fort Monmouth, NJ, and subsequently assigned to long-distance, high-volume message traffic handling on a 24/7 basis at a Far East Command Hq station in Tokyo. I served in that assignment for three years, had access to documents and reports on communications within the military and queried many on the (then) modern methods of communications by radio.

>From the military point of view of 56 years ago, having an interest in radio or the more general electronics field is only important towards assignment in a particular military occupation specialty (still familiarly called 'MOS'). Knowing on-off keying CW skills via amateur radio MIGHT get one assigned to Field Radio school (then the only Army MOS actually requiring OOK CW skill). Field Radio MOS then involved using HF from a truck-transportable station that was also equipped with teleprinters; teleprinted messaging was the norm in the Korean War (active phase '50-'53). The MAJORITY of 'radio' communications back then, a half century ago, was by VOICE and that over line-of-sight ranges. Military

radio plans in the field were already organized into three overlapping radio bands from high HF into low VHF, the bands subdivided for infantry-artillery-armor unit use. No one needed any morse code skills to operate those radios then. Indeed, it was more akin to one-way talking on a telephone, something that most civilians had already done in the 1950s.

>Now, with
>Morse as deeply buried as its creators and military electronics too
>secret to be entrusted to soldiers and sailors who haven't been vetted
>for security clearances, we're yesterday's news in the E ring.

I have NOT seen any of that "burial" nor of the "secrecy" alleged to any Pentagon "ring" in my Army service nor in the many years that followed as a civilian working on DoD contracts involving communications. The "secrecy" is actually on a very low Confidential level, the lowest of the three classifications. As a matter of fact, most Army radios of a half century ago where NOT used by signal personnel nor did they ever require any sort of security classification; no more so than revealing ANY military information to the enemy on anything.

I have no personal knowledge of what actually transpires in ANY "ring" of the Pentagon. I must depend on periodicals and documents published by defense electronics and electronics professional associations to yield such information. In those, and in archived copies of "Signal" (a quarterly of the Army Signal Corps, available new to signal personnel) there has been NO such statements of any "favoritism" expressed from a half century ago to today.

SECRECY in communications is regularly carried out today by UNvetted "soldiers and sailors" using a variety of cryptologically embedded (but selectable) means within radios. The standard small-unit (battalion or below) field radio is the SINCGARS family operating 30 to 88 MHz. The first SINCGARS went operational in 1989, almost two decades ago. Over 300,000 R/Ts basic to the AN/PRC-119 man-pack transceiver have been built by ITT, Fort Wayne, IN. More are available in HTs built by other firms plus the contracts awarded to Harris Corporation for newer, smaller SINCGARS-compatible multi-band radios. All of that family have their coding set by a "hopset" entry (encryption key and frequency-hopping sequence settings) which IS controlled by a "vetted" signal officer. The actual coding method is digital, beginning with a pseudo-random sequence generator involving digital feedback of a digital shift register could be known by an unfriendly...but the permutations of possible keys is so large that it is impractical for them to carry around super-computers in the field to defeat the cryptology in time to be effective. Note: The electronics technology to do all that has been known (and most things published about it openly) for over three decades, some of it public for four decades. In short, today's US military CAN use very robust, secure codes to allow UNvetted military personnel to communicate. They have had the capability to do so for nearly two decades.

PAVE PAWS has been around for decades. It is in the technology classification using multiple receivers to decrease the antenna beam width with an ability to enhance phase shifting of the incoming wavefront (allows other processing refinements of returns). Anyone can gather information on its general technological structure. Since it IS primary in its assigned operating frequency and IS part of National Defense, that National Defense ought to be considered primary by US citizens who wish to survive. Is a radio hobby more important than national survival?

>We'll have to find another reason to justify the allocations we enjoy.
>It's going to be hard work, and not nearly as easy as learning Morse
>(not that that would help now). We're going to have to get better - in
>fact, much better - at public relations: the Red Cross and other
>disaster relief agencies have known the importance of image all along,
>but now hams have got to get in the game and advertise ourselves as an
>anlternative to traditional communications during hurricanes, floods,
>earthquakes, etc.

Please leave the morse code test issue OUT. That has been settled for US amateur radio by the FCC after much, much debate for too long a time.

IMAGE for the general public MUST be aimed OUTSIDE of amateur radio publications. It cannot remain the insider topic WITHIN amateur radio groups or publications. If it is REALLY there then it could (and should) get out into the mainstream. Such emergency good works news just haven't gotten out to the general public. The public sees FCC issues as they affect broadcasting and cell phones in the national news. maybe something about business radio of public safety radio. Amateur radio news is not an important issue for such media. The public has rarely seen amateur radio communications during emergencies during national news...it HAS seen various National Guard units and local government agencies doing communications on the news, including FEMA equipment (going back to 1994 and the Northridge Earthquake in January with quickly-transported video message displays relayed by satellite for their own health-and-welfare messages seen in handwriting of senders and shown on local TV).

I'm not going to comment on the Katrina hurricane situation. That involves many more NON-amateur radio policies among local and state agencies. The Katrina hurricane happened over two years ago and the USA has had more emergencies since then. Rehashing the Katrina situation does NO good in attempting to get the word out to the general public about amateur radio. If ham radio is really as good as some declare it, it should be worth national attention. It has gotten very little on the national news in the last half century. QED.

One thing that should NOT continue is to keep thinking in the paradigms of pre-WWII 'radio' as is often presented in amateur radio magazines. Technology has gone through several plateau jumps of advancement since that long-ago time. Fantasies of some amateur radio licensees are still rooted to back then. Those are lost in the reality of today's radio capabilites and uses. The general public has its own fantasies and it is foolish to attempt trying to tell them other fantasies.

Amateur radio is a HOBBY. Let's try to focus on that.

Model vehicles are a hobby for others. The Academy of Model Aeronautics doesn't pretend to advance the state of the art of aviation but it was successful in lobbying for a hundred frequency channels for radio-control two decades ago. Consider that hobbyists are citizens and that the US government does listen to its citizens. Work from that basis.

Technical for sure but it appears that even technology available to
the general public isn't in (effective) use.
A known and fixed "target" in ANY digital processing system is very
easily noted and then removed from the data stream.
Legal resources? Sounds like the typical "When all else fails, blame
the ham" excuse.

>Do you also object to the "National Radio Quiet Zone" in West
>Virginia?
Absolutely not! And, all a ham has to do there is to coordinate in
advance. They have MANY issues with RFI from non-ham sources to
contend with there.
Wonder if PAVEPAWS is going to start shutting down microwave ovens and
wireless dog fences next? :-)

Bp
PS - No complaints w/ the government entity but w/ the contractor(s).

They obviously don't understand what amateur radio is all about.

Maybe - or maybe not. Secondary status means no interference need be
tolerated by the primary.

There used to be a 50 watt limit on 420-450 MHz for amateurs due to
the possibility of interference to radar.

> It used to be that we hams were a corps of operators who could
> be pressed into service quickly during a war or other crisis.

That's still the case. But it doesn't mean that the primary users of a
band have to put up with interference from secondary users.

> Now, with Morse as deeply buried as its creators and military

> for security clearances, we're yesterday's news in the E ring.

I'm not sure what you mean by "Morse as deeply buried as its
creators".

We hams continue to use Morse Code on the air - extensively, too!
MARS is running Morse Code nets again, on an experimental basis.

It's true that Morse Code has all but been eliminated by the US
military for its own communications uses. That's no surprise, even
though Morse Code was used extensively by the US military in both
World Wars, Korea, and Vietnam. But that doesn't mean hams should stop
using Morse Code.

> We'll have to find another reason to justify the allocations we
> enjoy.

How about these:

1) Public service communications (not just in emergencies, but for events like parades, marathons, bike races, etc.) Remember the search for Space Shuttle debris a few years back? Amateurs provided communications for at least some search groups, and it turned out to be more useful and flexible than cell phones or other radio services.

2) Education in radio and electronics. Learn-by-doing, IOW. Recently, ARRL ran a homebrew contest to design a 40 meter CW/SSB transceiver that would use less than $50 in parts. Several entries met all the requirements, and a winner was recently announced. What better way to learn radio than by building an operating a homebrew station?

3) Historical preservation. We have museums, historic districts, etc., in other areas, why not in radio? We hams have shown that old and new technologies can coexist, and an active operation is so much better than a dry nonfunctional museum display.

4) Experimentation/wilderness area. Most of the rest of the radio spectrum is channelized, digitized, and carefully planned as to its users and uses. The amateur bands are like a wilderness area, without all the central planning and channelization, where operator skill and technical knowhow can try all sorts of new and old things.
And where all citizens who can pass the basic tests for a license have access to lots of spectrum, modes, and activities.

> It's going to be hard work, and not nearly as easy as learning
> Morse (not that that would help now).

Morse Code is still worth learning, IMHO.

> disaster relief agencies have known the importance of image all
> along,
> but now hams have got to get in the game and advertise ourselves
> as an
> anlternative to traditional communications during hurricanes,
> floods, earthquakes, etc.

Agreed - but also as a fun thing to do. Emergency and public service comms are just one part of what hams do.

The key factor is that the "served agencies" want different things today in the way of communications. In some emergencies they won't need hams at all, in others they will really need amateurs to help out. But they're the customer, as it were.

Because they probably bought cheap amateur equipment, opened it out, and then found out that there weren't any channels available in the 450-470 MHz band that they could get licenses and frequency coordination for. Several sports events did just that until they got caught. One of my "day jobs" is as frequency coordinator for systems in the 450 MHz band, and we run into this all the time. The Congress refuses to give the FCC the necessary funding to apprehend them, and the Justice Department refuses to prosecute what they claim is petty offenses.

I've ranted about this before. I'm glad that Chris Imlay (ARRL General Counsel) got on this thing as hard as he did. We all owe a round of thanks to him.

The ham who gave me my novice exam, WA1BGR (SK), had a 10 KW generator in his backyard that he received from Air Force surplus via MARS. Not your $2,000.00 toilet seat, to be sure, but certainly a step up from the equipment available to the average ham, especially in 1964 New Hampshire, where power failures were a regular event. Would you be more comfortable if I said "poor relation" instead?

The fact is that equipment and expertise flowed from the military to the hams who were willing to work for it. That couldn't have happened by accident, and I don't believe it was an accident that ham allocations in shortwave bands survived during the era before geostationary satellites, when there was pressure from other governments and from corporate users here to carve out larger portions for broadcasting or commercial use.

> was more akin to one-way talking on a telephone, something that
> most civilians had already done in the 1950s.

I said we were a trained corps of "_operators_", not just CW operators. I know that military radios almost always use voice: I ran the Navy MARS station at Danang in 1971 and 1972. I got the job because I had a ham license and I was there, and the unit commander cared about what I could _do_, not what my MOS was.

FWIW, CW still came in handy on a couple of occasions: when signals dropped too low for phone patches, I could slide the KWM-2A down to the ham band and operate "maritime mobile" on CW to get health-and-welfare traffic through. One occasion I remember involved a seaman with a pregnant wife who was headed home on emergency leave due to complications of some kind: I'll never forget the look on his face when

I read him the reply to the "ARL Two, ARL Nineteen" priority message I had sent minutes before - "Your wife and newborn son both OK congratulations dad".

Of course, Health and Welfare traffic isn't a military necessity, but only a fool would neglect the morale of his men, and it didn't matter to the CO that I knew CW or that I used SSB most of the time - what _mattered_ was that I knew about long-path propagation, about how important it was to scrape the corrosion off the coax connectors, and that I could get the job done. They don't teach anything about operating "maritime mobile" at Fort Monmouth.

>> Now, with Morse as deeply buried as its creators and military electronics too secret to be entrusted to soldiers and sailors who haven't been vetted for security clearances, we're yesterday's news in the E ring.
>
> I have NOT seen any of that "burial" nor of the "secrecy" alleged to any Pentagon "ring" in my Army service nor in the many years that followed as a civilian working on DoD contracts involving communications. The "secrecy" is actually on a very low Confidential level, the lowest of the three classifications. As a matter of fact, most Army radios of a half century ago where NOT used by signal personnel nor did they ever require any sort of security classification; no more so than revealing ANY military information to the enemy on anything.

Well, I suppose anyone with a soldering gun could fix a KY-28 when the pins come off: but only a ham would know that he could get solder from the tube pins of a trashed PRC-25 and use a fire to heat up a knife for the job. It wasn't me, but I know it _was_ a ham that did it.

> I have no personal knowledge of what actually transpires in ANY "ring" of the Pentagon. I must depend on periodicals and documents published by defense electronics and electronics professional associations to yield such information. In those, and in archived copies of "Signal" (a quarterly of the Army Signal Corps, available new to signal personnel) there has been NO such statements of any "favoritism" expressed from a half century ago to today.

I could be sarcastic and say "What a surprise! An official publication that didn't talk about unofficial policies!", but I'll just point out that WA1BGR had his generator, and lots of other hams who put in the time with MARS had those and other trophies to show for their work, including Model 19 TeleType sets when they were still _the_ standard means of digital communication, temporary antenna masts that could give a club a winning edge on Field Day, and even access to military training for their sons that gave the young men a competitive edge in ROTC scholarship selection.

[snip]

> PAVE PAWS has been around for decades. [snip]

> Since it IS primary in its assigned operating frequency and IS part of National Defense, that National Defense ought to be considered primary by US citizens who wish to survive. Is a radio hobby more important than national survival?

It's at least as important as not allowing oneself to be swayed by jingoistic appeals to misplaced patriotism. Even assuming that PAVE PAWS accomplishes it's stated mission and provides warning of a submarine-launched nuclear attack, and even assuming that anyone survives such an event, Ham Radio operators and equipment would be essential to keep life going.

>> We'll have to find another reason to justify the allocations we enjoy. It's going to be hard work, and not nearly as easy as learning Morse (not that that would help now). We're going to have to get better - in fact, much better - at public relations: the Red Cross and other disaster relief agencies have known the importance of image all along, but now hams have got to get in the game and advertise ourselves as an alternative to traditional communications during hurricanes, floods, earthquakes, etc.
>
> Please leave the morse code test issue OUT. That has been settled for US amateur radio by the FCC after much, much debate for too long a time.

You're the one who brought it in: as I said before, we were a trained corps of operators, not just CW operators. Hams aren't just trained to pound brass: those that homebrew their own gear or compete in Field Day or participate in disaster-preparedness are trained to think on their feet, and that means they care about getting the job done, not the mode(s) they use to do it.

> IMAGE for the general public MUST be aimed OUTSIDE of amateur radio publications. It cannot remain the insider topic WITHIN amateur radio groups or publications. If it is REALLY there then it could (and should) get out into the mainstream. Such emergency good works news just haven't gotten out to the general public.

That's the problem: the agencies that welcome our support are very good at claiming the credit and putting _THEIR_ brand name in front of the public, but ham operators must become more agressive and effective at establishing *our* *own* identity. When you lift the veil that covers the inner workings of most "public service" organizations, you will find that their first priority and best-funded effort is advertising _their_ name and _their_ accomplishments.

Wearing a "Red Cross Volunteer" shirt when the TV cameras arrive doesn't help ham radio: we need to have "Amateur Radio Emergency Service" or "Radio Amateur Civil Emergency Service" and similar labels on our backs so that the public realizes that we're still out there and able to help anyone that needs it, not simply a part of the Red Cross or other agency.

> The public sees FCC issues as they affect broadcasting and cell phones in the national news[,] maybe something about business radio [or] public safety radio. Amateur radio news is not an important issue for such media. The public has rarely seen amateur radio communications during emergencies during national news...it HAS seen various National Guard units and local government agencies doing communications on the news, including FEMA equipment [snip].

[snip]

> If ham radio is really as good as some declare it, it should be worth national attention. It has gotten very little on the national news in the last half century.

That's our fault, not someone else's: noone is awarded national attention because they're "worth" it, no matter how hard they work at going good. We'll get national attention when _we_ make it a priority to do so - not only during, but before and after the events that draw media attention. All the other players are vying for their 15 seconds of fame, and we're fools if we _assume_ that anyone will give away so much as 15 milliseconds to us.

> One thing that should NOT continue is to keep thinking in the paradigms of pre-WWII 'radio' as is often presented in amateur radio magazines. Technology has gone through several plateau jumps of advancement since that long-ago time. Fantasies of some amateur radio licensees are still rooted to back then. Those are lost in the reality of today's radio capabilites and uses. The general public has its own fantasies and it is foolish to attempt trying to tell them other fantasies.

I don't think in terms of "pre-WWII" radio: I think in terms of what can be accomplished with today's tools using today's training. However many "plateau jumps" technology goes through, the reality is that it will still require operators on the ground to set it up, to maintain it, and to safeguard it during operation.

I don't presume to know the general public's fantasies, but we're not going to be fantasizing when we plan how we'll make the public aware of our status and our achievements, just as other organizations and agencies do.

[snip]

Long story short: what's important to the media is selling soap. That's what they make money at, so that's what they pay attention to. In order to sell soap, the cameramen seek images that they know will keep the viewers tuned in during the soap commercials. The Red Cross knows this, the Salvation Army knows this, and the National Guard officers assigned to media liason (that _is_ a separate MOS now, isn't it?) know it too.

They help the media to sell soap, and they get their names and their agenda in front of the public as a result. If ham radio is to have any influence in Washington or at the International frequency allocation conferences, we must learn how to sell our own brand of soap.

HTH. YMMV. HAND.

:
: That's still the case. But it doesn't mean that the primary users of a
: band have to put up with interference from secondary users.

Ah, but who is the primary user..? Here it's the military. Amateurs have to put up with anything and everything. On all bands.

It was a US restriction a long time ago.

Well, here in the USA amateurs are definitely the secondary users of
420-450 MHz.
So while we can complain, we don't have the same "standing", as it
were.

I think the radar system can indeed discriminate. One problem, I think, may be this:

Radar that uses a single antenna for both transmit and receive cannot "see behind" a reflecting obstacle, nor an interfering RF source. So the amateur repeater casts a "shadow" as it were.

To make it more of a sporting course, the amateur signal is intermittent, and FM. Which may look like all kinds of things on the radar display.

>
> Sounds like some real shoddy engineering took place at taxpayer expense.

Maybe, but probably not. Some things are fundamental limitations of the physics involved.

> I can think of 3 or 4 ways to remove false targets w/o loosing any system level accuracy or sensitivity. In fact, didn't they perfect that during the cold war?

Of course the processing system may be able to be programmed to ignore the amateur repeater - which would make it the perfect place to hide something.

Remember that the radar system in question is probably being used in roles it was not originally designed for. That's probably why the problem didn't show up before. For example, if the radar was meant to look for high-altitude intruders, things like ground clutter and RF sources below a few hundred feet could simply be ignored. If the system is now being adapted to look for low-altitude and water-bourne intruders, those RF sources become a big headache that the system wasn't designed to handle.

> Gee... Thinking about it some. All Abdulah (or Ivan or whoever) needs to do is buy a 440 rig, an amp and a yagi and go out as a "rover"; 3 or 4 kW ERP down the bear's craw for a while then move.

Maybe. But the result would probably be just the opposite: firing up that setup would announce his exact bearing and altitude. IOW, announcing "HERE I AM" to the radar system. With no legitimate sources of RF in the area, and no "shadows" to hide behind, finding the intruder would be easier and faster.

This sort of thing isn't new. When you don't know the exact threat, you try to plug every possible hole.

Way back in WW2, the Allies spent a lot of time and expense developing receivers that had extremely low local-oscillator radiation. Only approved receivers could be used aboard Allied vessels. The concern was that enemy U-boats could detect and find Allied convoys by listening for the local-oscillator radiation. When you have dozens of ships all monitoring the same frequency using big antennas and unshielded receivers, the total LO radiation could be heard a long way off. And while radio silence could be maintained in a convoy most of the time, the receivers were needed for weather reports, U-boat warnings, distress calls and such.

It turned out that the U-boats did not listen for the LO radiation after all. But this was not known until after the war.

On May 6, 3:54 am, Bill Horne <b...@horneQRM.net> wrote:
> AF6AY wrote:
> > Bill Horne wrote on Sat 3 May 2008 under the thread 'Discussions' in RRAM:

> The ham who gave me my novice exam, WA1BGR (SK), had a 10 KW generator in his backyard that he received from Air Force surplus via MARS. Not your $2,000.00 toilet seat, to be sure, but certainly a step up from the equipment available to the average ham, especially in 1964 New Hampshire, where power failures were a regular event.

The first ham I ever met was Sam, K3RTR, (SK). He had a complete RTTY setup in his basement shack (near the post office in Upper Darby, PA, back in 1966 or so. He was very active in Navy MARS, too. Even a 12-year-old newcomer like me got the connection.

> The fact is that equipment and expertise flowed from the military to the hams who were willing to work for it. That couldn't have happened by accident, and I don't believe it was an accident that ham allocations in shortwave bands survived during the era before geostationary satellites, when there was pressure from other governments and from corporate users here to carve out larger portions for broadcasting or commercial use.

I think the equipment flow was both an incentive for the volunteers and a recruiting tool. It certainly was better than simply scrapping older stuff, or getting a few pennies per pound in surplus.

I recall that, officially, the equipment handed out through MARS channels did not actually belong to those who got it; they could not sell it and if MARS ever wanted it back they had to return it. In reality I don't think the Navy ever came looking for Sam's Model 19, but of such distinctions are entire programs made possible.

As to the survival of the amateur HF bands, I think there were several factors involved. One was the fact that those bands were relatively narrow - from 1958 to 1979, we US hams had access to only 3.3 MHz of the 27 MHz of bandspace from 3 to 30 MHz. More than half of that 3.3 MHz was the relatively-undependable 10 meter band, and parts of 75 and 40 meters were shared with SW broadcasting. So the potential gain in spectrum to be had from amateurs was small.

The HF amateur bands were and are allocated by international treaty. If the US tried to change that treaty to give more bandspace to the military, it would be clear to the other side, of course.

There was also the influence of well-known amateurs such as Gen. Curtis LeMay, Barry Goldwater, Art Collins and even Arthur Godfrey.

Besides, there was plenty of historic precedent. Before WW2, the Army had used parts of 80 meters for communications during training exercises. When the war ended, US hams did not get all their bands back right away, as the various services needed time to move off of them. Note that it took many years before we got all of 160 back (which is MF, not HF, but it proves the point).

> I said we were a trained corps of "_operators_", not just CW operators. I know that military radios almost always use voice: I ran the Navy MARS station at Danang in 1971 and 1972. I got the job because I had a ham license and I was there, and the unit commander cared about what I could _do_, not what my MOS was.

Thank you for your service.

> FWIW, CW still came in handy on a couple of occasions: when signals dropped too low for phone patches, I could slide the KWM-2A down to the ham band and operate "maritime mobile" on CW to get health-and-welfare traffic through. One occasion I remember involved a seaman with a pregnant wife who was headed home on emergency leave due to complications of some kind: I'll never forget the look on his face when I read him the reply to the "ARL Two, ARL Nineteen" priority message I had sent minutes before - "Your wife and newborn son both OK congratulations dad".

Great story!

I have known a few amateurs who were military radio operators in Korea during the early part of that conflict, and they did indeed use Morse Code for military communications.

> Of course, Health and Welfare traffic isn't a military necessity, but only a fool would neglect the morale of his men, and it didn't matter to the CO that I knew CW or that I used SSB most of the time - what _mattered_ was that I knew about long-path propagation, about how important it was to scrape the corrosion off the coax connectors, and that I could get the job done.

IOW, practical radio skills.

> They don't teach anything about operating "maritime mobile" at Fort Monmouth.

> Well, I suppose anyone with a soldering gun could fix a KY-28 when the pins come off: but only a ham would know that he could get solder from the tube pins of a trashed PRC-25 and use a fire to heat up a knife for the job. It wasn't me, but I know it _was_ a ham that did it.

Like I said, practical radio skills....

This sort of thing shows up in various ways.

Way back in EE school (class of 1976), I was in a class where the day's subject was analysis of a common-source JFET amplifier with tuned input and output circuits. Prof. K. drew the circuit on the board and asked us what it would do if the tuned circuits were resonant at about the same frequency.

Everyone in class said it would amplify signals near the resonant frequency of the tuned circuits. I offered that if certain conditions were met, it would oscillate. The other students thought I was nuts because we hadn't gotten to oscillators yet, but Prof. K asked why I responded that way and what the conditions would be. I replied that real JFETs have significant capacitance between gate and drain, and if the gain were high enough, etc., the conditions for oscillation would be met. Prof. K said "That's right, very good" which astounded the rest of the class.

Then he asked "You're a ham radio operator, right?" which surprised me even more, since I didn't know him well at all. I said I was and he replied that the hams in his classes always knew the practical end of things and how to turn theory into practice.

Exactly. Lots of examples of that, even today.

> the agencies that welcome our support are very good
> at claiming the credit and putting _THEIR_ brand name in front of the

I would say "assertive" rather than "aggressive", but the concept is basically the same.

That's a concept that needs to be pushed. One of the modern paradigms
is to deemphasize the need for skilled, trained, knowledgeable
people. It's always as if the technology just happens.

Perhaps that view is changing a little - note the cell-phone TV
commercials where the huge crowd of people follows the customer with
the cell phone.

> I don't presume to know the general public's fantasies, but we're not

> conferences, we must learn how to sell our own brand of soap.
>

Actually, I would say we have several kinds of soap to sell. Emergency
and public-service comms is certainly one kind, but there are many

others. All have a place.

In fact, this is what can make amateur radio difficult to sell. There are so many different activities that are part of Amateur Radio that it's tough to come up with a quick visual or sound-bite. Whether it be the ham pounding brass on 80 meters with a homebrew hollow-state rig, or the ham on the shuttle talking to middle-school kids, or the ham providing communication at the Boston Marathon, the next hurricane, earthquake, etc., it's all ham radio and it's all good.

Getting that message across is our challenge

I haven't chimed in because I had a foot on both camps, so to speak. The problem is not new, and was handled on a case-by-case basis until it became a "real big" problem when the system was upgraded. Most if not all of the ham repeaters which fall in the "circle of interest" for the Beale AFB site were in my District (San Francisco) and I knew/know several of the repeater owners personally.

A practical example of the problem in the non-military world: One would have problems using the usual consumer type in-line cable amplified splitter with a VHF/UHF receiver such as a scanner because the receiver deals in signals of the order of 0.5 uV or less while the amplifier is designed to deal with signals in the order of 1 mV or more and consequently the noise floor is much higher.

Whether the contractor(s) designing the system and/or running the tests are competent or not is an exercise left for the reader.

I am told by a ranking MARS member that the loan/giveaway program stopped many years ago. We used to see a lot of military surplus gear on the market even up into the late 1950s - I remember the ARC-5 stuff that you and I got started with, and the surplus tank low-band FM receiver that I had for monitoring the Sheriff and the Highway Patrol before crystallized receivers and scanners became consumer items -- but that's all history now. Post-Korean War stuff never hit the market.

I am told that what the military doesn't give/sell/loan to foreign governments and even our own National Guard is scrapped (i.e. crushed beyond usefulness) , no doubt due to the pressure of the equipment manufacturers (yes, there are still quite a few left in the USA) who are more than happy to sell new stuff to amateur and commercial users alike at listed prices.

Incorrect. Amateur radio operating protocol is nothing like what is used in the US military.

That "case" might have been valid prior to WWII but that time period was 67 and more years ago.

>> Now, with Morse as deeply buried as its creators and military
>> electronics too

>
>I'm not sure what you mean by "Morse as deeply buried as its
>creators".

I would suggest you borrow a 'communications receiver' that can tune in the HF spectrum OTHER than amateur radio band allocations.

For one thing, the US military had all but abandoned morse code mode before 1953 for any mass-volume messaging connecting North America to military bases around the rest of the world.

For another thing, the US military has abandoned HF for any mass-volume messaging and now uses secure military communications satellites, troposcatter, and the DSN (Digital Switched Network) for 24/7 communications. DSN has very robust security and is the major system of 'flash' alerts to land bases. Alerts for submarines (to listen to HF thru microwaves for the main message) are slow-speed encrypted data at VLF that can be received while submerged. The US military still keeps HF radios on a standby basis but only uses them for periodic operational checks. MARS is not a part of the daily US military messaging routine, although it is much closer to the use of operations protocol than amateurs.

>We hams continue to use Morse Code on the air - extensively, too!

Please define "extensively" (with or without exclamation mark).

No one has stated or implied that amateur use of morse code was not "extensive." In an unofficial poll at the ARRL website some time ago, #1 communications mode on amateur bands was voice.

>MARS is running Morse Code nets again, on an experimental basis.

Military Affiliate Radio System mission was changed about five years ago to act in accord with other US government agencies to (ostensibly) link them together. Army MARS Hq is at Fort Huachuca, AZ, the same military base that houses the Army Military Intelligence training facilities.

>It's true that Morse Code has all but been eliminated by the US
>military for its own communications uses.

That is not true. For routine tactical or strategic communications the US military has abandoned morse code.

The M.I. school at Fort Huachuca still trains some in morse code signal intercept analysis but that is NOT communications per se. To attempt stating that SIGINT operations "use morse code" is like saying the Army still uses muskets and Revolutionary War uniforms because one Army unit in Washington, DC, has them for ceremonial duties.

>That's no surprise, even
>though Morse Code was used extensively by the US military in both
>World Wars, Korea, and Vietnam.

Morse code was used "extensively" in World War ONE. In that 1914 to 1918 period voice communications was relegated to wireline communications circuits. Teleprinter circuits had already been established before the US entry into WWII, including its use on USN ships (see the 'SIGABA' descriptions on various websites for online encryption capability over teleprinter as early as 1940).

As a soldier during and just after the Korean War, doing mass-volume communications via HF, I can assure you that morse code was NOT used for such communications about logistics or military planning plus (in a secondary basis) broadcasting news and 'health and welfare' messages carried for the Red Cross and other agencies to military members.

The vast majority of communications carried on during the recognized active period of US involvement in Vietnam was voice and teleprinter. Like the Korean War, the Vietnam War was not a 'true' war yet service members were killed or wounded as a part of that actual warfare.

During the prosecution of the Korean War, the US military routinely handled about a quarter million messages a month through military facilities. That was nearly doubled for the Vietnam War. Morse code communications MIGHT have been used in rare instances for both wars but its role was so minor as to be discounted compared to the MASS of messaging needed to maintain troops and equipment far from the USA.

All of that military communications information is public and available to anyone who cares to look for it. I would suggest the U.S. Army Center For Military History as a starting point for very detailed historical accounts of the US Army since the Revolutionary War.

>But that doesn't mean hams should stop using Morse Code.

NOBODY has said "hams should stop using" it. Please try to restrain generating another sub-thread about it. Please try to educate yourself about radio uses outside of amateur radio as described other than the ARRL publications or website.

In order to EDUCATE THE PUBLIC, I would suggest channeling your promotion OUTSIDE of amateur radio venues. The general public and lawmakers don't much look into ham radio venues.

AF6AY

In 2004 electric power failures in western Washington state were a
regular event. All rural homes in Kitsap County, WA, have fireplaces
and stacks of wood outside for that...despite electric power rates
there being among the lowest in the USA.

There is no need for sarcasm. I returned to the States in 1956.
The active phase of the Korean War stopped in June of 1953.
['truce talks' continue to this day in Korea along the DMZ]
The Vietnam War ended for the USA 35 years ago.

I would reply to more of your message but Google doesn't like it or
something.

: Incorrect. Amateur radio operating protocol is nothing like what
: is used in the US military.

[snip]

Well, I seem to have sparked quite a debate..!

However, a lot of it seems to have gone more than a little OT (which doesn't surprise me and is actually quite interesting, so don't consider it a moan..!)

But.. what are the thoughts on my original point, that of the differences in attitude of the authorities in the US and UK about protection from interference from commercial operators using frequencies within the amateur bands..? It seems to me, unless I've misunderstood, that in the US

you can still claim a certain degree of protection from other users,
whereas here we can't.

Well, it still existed when I became a ham in 1967. But that
was quite a while ago...

>�We used to see a lot of military surplus gear
> on the market even up into the late 1950s - I remember
> the ARC-5 stuff

> items -- but that's all history now.

I still have some ARC-5 stuff in working order, and lots of parts. A
couple of LM frequency meters, and a couple of ME-297 VOMs.

I got started with stuff a lot more basic than an ARC-5, too.

At least here in Philly, WW2 surplus was common well into the 1970s.
Fair Radio Sales, to name one mailorder place, was still selling WW2
surplus at low prices in that same timeframe. The N2EY library has
some of their catalogs....

For example, the 1976 Fair Radio catalog lists the BC-457 and BC-458
at $14.95 each (new condition), and the R-23, R-25 and R-26 at prices
from $15.95 to $22.95. Earlier catalogs have a much wider selection at

much lower prices.

>�Post-Korean War stuff never hit the market.

Not in the quantities of WW2 stuff, obviously.

I think that one factor in the enormous amount of WW2 surplus was that American industry was pouring the stuff out in enormous quantities by 1945, building up for at least another year of full scale combat, when the war suddenly ended. That situation has not recurred since.

A look in the 1994 Fair Radio catalog shows the following:

Collins 490T1 (CU-1666) antenna coupler for 618T, $400 used

AM-6155/GRT-22 RF power amplifier, 225-400 MHz, 50W output, $235

R-1051B/URR HF receiver, used, $750

RT-618C & AM-3007 HF transceiver set, $795

RT-749/ARC-109 UHF transceiver, 225-400 MHz, $495

RT-594/ARC-3A HF transceiver, $210

R-390A receiver prices from $135 to $330

(you get the idea - there's a lot more)

So there must have been some path for some surplus to the US market, although except for a few things the prices would be a problem.

I have been told that a lot of stuff is scrapped rather than have it fall into the wrong hands.

Excellent! I am delighted to hear that, but not surprised.

Add K2ORS, aka "Shep" (though he used the name Parker on the ham bands) to the above list.

73 es tnx for the info

Jim, N2EY

There is considerable history of frequency allocations available at the International Telecommunications Union (ITU) website. Some of it is free for download or perusing. The ITU-R handles largely civil radio allocations but also takes into account military uses. Mass-volume messaging just on HF bands by common carrier services were already established in the latter half of the 1930s. That is also explained in the 'Collins Sideband Book' by Bruene, Shoenike, and Pappenfus. The migration of mass-volume messaging from HF to microwaves via commsat and, later, high-speed optical fiber cable, were done to avoid the ionospheric disturbances common to HF.

WARC-79 (World Administrative Radio Conference of 1979) yielded more bands to radio amateurs worldwide. There were some added expansions to 'SW BC' but, by bandwidth count, amateurs got more than broadcasters. The '40m interference' issue of broadcasters versus amateurs took until WRC-03 (World Radio Conference of 1953) to achieve a compromise that won't be complete for a few years from now. Broadcasters were granted new bands in HF at WRC-03. In the last four decades there have been MANY changes to HF use by many radio services...and FAR MORE above 30 MHz. The migration of common carrier radio services from HF provided more space for individual fixed radio communications on HF. There is still room for other radio services on HF but few want it.

The international radio use of the spectrum above 30 MHz over the last half century has been so extensive it could fill a small book to contain its changes. Those who have access to the huge table of frequency allocations in Part 2, Title 47 C.F.R. over the years can infer what they want. It covers civil and government frequency allocations from 9 KHz to 300 GHz.

The migration of common carrier services from HF took about a quarter century to complete. It didn't happen overnight. The number of slots on the geosynchronous orbit were filled over a decade ago.

'Shortwave' broadcasters like their migration to satellite relay because it relieves the outages occurring on HF as the ionosphere changed. That's unfortunate for SWLs who were accostumed to essentially free programming but is a definite improvement of the fading and other effects on purely HF paths. Successful tests of DRM (Digital Radio Mondial) have been going on for at least four years. Adoption of DRM as a standard 'SWBC' mode is delayed by such listeners not desiring to obtain DRM-compatible receivers. Technically this digital broadcasting scheme has worked out very well.

So far there have been NO auctions established for US civil radio services below 30 MHz. The HF ham allocations can be said to be safe from takeover. Speculating on HF being gobbled up by capitalists is more fantasy than reality.

Long-haul mass-messaging services have been increased by 'repeaterless' fiber optic cables (amplification pumping and signal reconditioning only required at land stations). One of the longest today is the double 4 GPS optical fiber carrying digital signals running from the UK through the Med, under the Indian Ocean, around southeast Asia, then north to Japan. At 10 bits per circuit, each 4 GBS path can carry 100,000 circuits simultaneously...and full-duplex at that. There are many of other optical fiber paths in the world, over land and under water.

USA radio amateurs were denied a full band on 60m due to failure of proponents from recognizing that many fixed HF frequencies in-around that band had already occupied those spots for decades. USA hams got only five separated channels, each just big enough to carry one SSB voice channel. I see that as just poor planning by the ARRL who petitioned for it.

HF on the EM spectrum has far fewer users (other than hams now than it did four decades ago. The US military uses it now for backup (with limited traffic handling) as a sort of last-resort contingency use.

Of course, US hams use HF 'extensively.' For hobby purposes. It is NOT 'pioneering the [HF] airwaves' (that being done in the 20s and 30s) but some like to imagine they are doing that.

The Military Affiliate Radio System was never a part of the tactical or strategic radio communications effort/network/system within the US military since it began (under another name) in pre-WWII US Army. It was generally considered to be a Public Relations activity akin to Special Services functions such as the AFRS (later changed to AFRTS, Armed Forces Radio and Television Service) or the Special Service traveling sports teams. Those of us who did the 24/7 grunt work of keeping all units communicating with one another did not consider MARS to be 'great.' None of us 24/7 grunt communicators required any federal license to do our jobs.

>congratulations dad".

FWIW, I can relate a similar tale. The 250-TTY torn-tape relay floor at ADA Control had many operators on each shift. Each was assigned a group of circuits. TTY tape was chadless, both punched and printed. Red Cross and other agencies got lowest priority handling after the start of the 'radio day' (about 2 AM local time). One TTY operator spotted a message to another on his shift. He showed the tape to his friend who was overjoyed at the news that he was now a newborn father. Red Cross people wanted to pass the message to recipient in person. New father blurted out "I already knew it." That sparked a lot of indignity to the officials who only thought of 'procedure' and 'order of things.' He was reported to his company commander. CO was caught in a bind, being good to his men but also having to play politics with higher officials. I did some mild pleading of his case, suggesting Company Punishment (similar to Captain's Mast in USN). CO caught the drift and, knowing I had been scheduled as CQ (Charge of Quarters) that night, remanded his 'punishment' to me to handle while on CQ. Newborn father was still feeling good despite being chewed out so his 'punishment' was largely to keep me from falling asleep while on the 5 PM to 8 AM next-day CQ period. NO MARS involvement there, none needed.

BTW, a military purchased Collins KWM-2 is the AN/FRC-93 and is the commercial version with all crystals, not limited to amateur radio bands (of 1975). There's an FRC-93 TM on the Internet, PDF size of about 6 MB. I have one. It is essentially the technical manual written, produced by Collins.

In three years of my assignment with ADA in the Army, there was only ONE day of a two-hour total radio blackout on HF in 1955. Minimum RF power output at ADA was 1 KW on HF. That is only 10 db higher than typical ham radio HF transmitters. All operations were 24 hours a day, 7 days a week, and remained that way until 1963 when Army downsizing had all ops transferred to USAF, equipment, sites and all. USAF gave it all up with sites, buildings given to the Japanese in 1978. That was 30 years ago.

> : 420-450 MHz.

Personally I'd rather have, say, 1 MHz of worldwide-exclusive-amateur
allocation than 2 MHz of shared bandspace. But that's a minor thing,
really.

The big problem here in the USA with regard to amateur bands is that
our FCC tolerates too much RFI from unlicensed emitters. For example,
plasma TVs and other consumer electronics are notorious RF
noisemakers. The whole BPL controversy is a classic example of a bad
engineering idea being pushed for the wrong reasons. There's lots
more, but a lot of it boils down to lack of enforcement resources
coupled with the idea that the RF spectrum doesn't need as much
protection from noise pollution.

Recently, there was a particular brand/model of flat screen TV that
radiated significant RF on the emergency-locator frequency. That
caused quite a bit of excitement....

Fort Monmouth is the home of CECOM, the ARMY's Central Electonics

COMmand. The US Army waterborne vehicles are limited to river-crossing large inflatables although some are sent to USN or USMC schools for landing craft, hovercraft training. The "AN/" in a military nomenclature stands for Army-Navy and has for 6 decades. Any soldier, sailor, or airman can operate an "AN/" equipment if so authorized. Land field communications equipment is usually built to withstand total submergence in water. That CAN happen on land.

Rest assured that field radio and radio relay students at Fort Gordon, GA, (Camp Gordon in the 50s) DID learn about short- and long-path [RF] propagation...and how to keep coaxial connectors, indeed all connectors clean and workable...and MUCH more. NVIS techniques have been taught for three decades at Gordon, usually referred to as 'Nevis' as its familiar name.

Fort Gordon has taught operation of the standard small-unit land radio for two decades, the AN/PRC-119 plus its mobile and fixed versions (same R/T), plus the airborne unit, the first of the SINCGARS family. SINCGARS compatible radios don't have frequency or band selectors in the usual sense. It has a touch-screen with display to enter both the code key and the frequency-hopping key as determined by the local signal officer. First operational in 1989, it was field tested in the First Gulf War, then used 'extensively' in the Second Gulf War plus Afghanistan. Digitized voice, digital data, selectable clear-channel or encrypted anywhere in the 30 to 88 MHz region. ITT Fort Wayne, IN, has made 300K+ of those and Harris Corporation now has contracts for more in a newer, smaller version. It is remarkably robust, especially in crypto mode, can be netted. Internal time base can be calibrated via GPS signals via an AN/PSN-11 'Plugger' by plugging it into a connector on its front panel. There are SINCGARS-compatible HTs now on duty in Iraq and Afghanistan.

>Well, I suppose anyone with a soldering gun could fix a KY-28 when the

The AN/PRC-25 was solid-state except for the single vacuum tube in the PA. AN/PRC-77 was its fully solid-state version. Both were VHF with channelized tuning (considered abhorent by a few hams) but turned out to be mainstays for Vietnam field radio use. Both are now obsolete.

Having seen the innards of both up close and personal, there are plenty of places to obtain solder from it...if that was a real necessity. Jury-rigged repairs have been going on with ALL military land equipment since before WWII and not just by licensed radio amateurs. <shrug>

Opponents to amateur radio use of anything could point (accurately) to "jingoistic" statements of "misplaced patriotism" towards the ARRL. <shrug> There are many sides to any issue.

>Ham Radio operators and equipment would be
>essential to keep life going. [after a nuclear holocaust]

I've had one complete physical exam since getting my amateur radio license last March. My primary physician had detected no new super-human powers in my body. :-)

That absolute statement is unprovable. Radio amateurs are as mortal as any other human being. As one who has seen electronic equipment developed for all possible 'radio' environments. Amateur radio gear is NOT close to rad-hardened military equipment. It is essentially consumer electronics grade although better than most consumer stuff. Only two ready-made HT radios (as I recall) are advertised as fully submersible.

Boosters of amateur radio licensee qualities tend to forget that there are many, many more 'civilians' who are knowledgeable and proficient in radio communications equipment and techniques. Their numbers may be MORE than the total number of ham licensees in the USA. Licensed radio amateurs in the USA make up only about a quarter of one percent of the total population.

>...Hams aren't just trained to
>pound brass: those that homebrew their own gear or compete in Field Day
>or participate in disaster-preparedness are trained to think on their
>feet, and that means they care about getting the job done, not the
>mode(s) they use to do it.

That's a lovely thought, but misleading. Lots of 'civilians' are also able to "think on their feet" and do so regularly. Utility repairpersons reacting to large-scale damage repair are one such example that I've observed up-close and personal.

My observation of 'Field Day' since its onset has been a radio
contest carried out in a park on a nice day in June with picnic
food. When QST had a two-page article on Field Day recipies,
that pretty much wiped out any notion in my mind that Field Day
was any 'emergency exercise.'

I think of them as matters of economics and practical reality. To wit: it should be obvious that we cannot have every possible mode available on every band. Some limits must be imposed on the number of modes and the way in which they share limited bandwidth. This is one of the reasons why the FCC exists. This is one of the (ostensible) reasons why digital modes were not allowed for many years.

> And, I also object to the idea (which I think is implied by the tone of your other messages - please correct me if I'm wrong) that the choice of communication methods is somehow exclusive... that the fact that a method which is superior (by your criteria, perhaps) means that other methods that you find inferior should be wiped out or abandoned... or that people who prefer to use the other methods are somehow responsible for Holding Back The True Progress.
>
> My own perspective is that people may have *many* criteria for chosing a means of communication (by radio or otherwise). Bandwidth, or bandwidth*reliability is not the sole criterion that people use, in practice, nor do I think there's any reason that it should be. Life is full of tradeoffs between different criteria - information bandwidth per Hz of spectrum, robustness of encoding, suitability for multi-point communication, resistance to different sorts of interference, cost of equipment, availability of equipment, and so forth. I communicate with my wife by voice, by email, by telephone, by scribbling half-illegible notes on scraps of paper, and by bringing home flowers... different methods, for different types of information-passing under varying conditions.

Again, if you can't fit every possible mode onto a given band (by the way, every possible mode means exactly that, not just modes that are commonly used by hams - otherwise, we would have APCO 25, in addition to DV, to give just one example). Therefore, we must prioritize; some modes will be authorized, while some other modes will be excluded. This goes back to my claim that it is a matter of economics; it represents a managed resource (a limited "supply") in the face of potentially unlimited demand. It is from that perspective that I claim that old time Morse zealots are impeding progress and are attempting to arrogate to themselves a finite public good, much like cattlemen grazing their cows on public grasslands while excluding others from using those public lands for other purposes.

Considering the small, aggregate size of the HF bands, can you offer some suggestions as to how many modes can plausibly 'share the road?' What modes must be forbidden so that the modes that you like can be allowed? If you say that there are none, then perhaps we can have APCO 25, DV and DD on HF? What do you say to the hams who claim that AM shouldn't be used on HF, because it uses to much bandwidth?

Well, not every *possible* mode.

> Some limits must be imposed on the number of
> modes and the way in which they share limited bandwidth. This is > one of the reasons why the FCC exists.

Of course. But there are other factors, such as how popular a mode is, how much bandwidth it occupies, how it is implemented, etc.

>This is one of the (ostensible) reasons
> why digital modes were not allowed for many years.

Please elaborate, particularly on the dates and where you got thise idea.

The information I have seen says that the main reason FCC limited the modes amateurs could use was that FCC has to be able to monitor amateur transmissions. So if they allowed hams to use a new mode, their monitoring stations had to be able to decode it.

45.45 baud 5 level Baudot RTTY was authorized for amateurs in the USA about 1948. Analog SSTV (an image mode) followed in the very early 1960s.

In the late 1970s-early 1980s, new monitoring equipment made it possible for FCC to decode lots of modes, so US amateurs were authorized to use ASCII RTTY, AMTOR, packet, and lots of other modes. We're talking 20-25 years.

Of course not all modes are well-adapted to all bands. HF packet as used by amateurs turned out to be a bit of a bust, due to being ill-suited to HF propagation. PSK31, OTOH, has been a big hit.

The biggest impediment to digital modes in the ARS, IMHO, is the cost of implementing them. Inexpensive PCs and "soundcard modes" have changed all that.

With all due respect, I think you are avoiding the question. Under
current FCC rules, almost any conceivable mode can be used on the
amateur bands if it is properly documented, does not involve
encryption, and is reasonably spectrum-efficient.

Look at how PSK31 came to amateur radio for an example. It was
developed by hams, not manufacturers. It's relatively easy to
implement without a big investment of special equipment, it's well-
adapted to HF conditions and spectrum-efficient. Most of all, a
considerable number of hams find it to be fun.

> It is from that perspective that I claim that old time
> Morse zealots are impeding progress and are attempting to
> arrogate to

How have "Morse zealots" done what you claim? In the US regulations, there are no Morse-code-only segments of the HF bands - all are shared with either data modes or voice modes. Every Hz. And it's been that way at least 46 years.

Except for 2.5% of 6 and 2 meters, all of VHF/UHF and 160 are wide open to all authorized modes for the various bands.

How are Morse-Code-using hams doing what you claim?

The cows-grazing-on-public-land analogy isn't really valid, because amateur radio isn't a commercial venture, nor does the use of one mode damage the band for use by others at a later time.

Try this one:

The amateur bands are like a public park system. Some are small, some are large, some easily accessible, some remote. Depending on their characteristics, different parks/bands are used for different activities at different times. The question is how to best allocate the resources to accomodate those who want to use them.

That's exactly the point. Well worth repeating!

That depends on the modes and their characteristics. For example, it's
not a good idea to allow 30 kHz FM voice on 40 meters, because that
band is only 300 kHz wide, but the same mode is fine for VHF/UHF
bands.

> What modes must be forbidden so that the modes that
> you like can be allowed?

> If you say that there are none, then perhaps we can
> have APCO 25, DV and DD on HF?

If they meet the criteria of not being encrypted, being suitable
for HF use, and being reasonably spectrum-efficient, why not?

As long as they are grouped with similar modes, what's the problem?

> What do you say to the hams who claim that AM
> shouldn't be used on HF, because it uses to much bandwidth?

That depends on how "too much bandwidth" is defined. Certainly
transmitting hi-fi AM that's 10-15 kHz wide on a busy HF band is
spectrum-inefficient and inconsiderate. OTOH, good-quality voice AM
can be had in 6 kHz or so, and when a band is not too busy, why not
use it? Similar

It seems odd that "Morse zealots", whose favorite mode uses only a few
hundred Hz at most, are being held responsible for "impeding
progress", when most of the HF amateur bandspace in the US are
allocated to voice modes that take up much more spectrum.

Should hams stop using Morse Code? Or any other mode they now use?

>available on every band.

We can't have all of the modes, simultaneously, with an unlimited

number of users, on every band band, at the same time. Bandwidth is
limited - granted.

It does not follow from that, that we must be limited to a
strictly-enumerated set of modes at all times. The FCC used to assert
that this was the case, but has eliminated many of those constraints
in favor of an approach which favors more experimentation and
development.

>   Some limits must be imposed on the number of
>modes and the way in which they share limited bandwidth.

I agree that a policy that users of the band must share bandwidth in a
reasonable and respectful way, is reasonable and proper.

I do *not* agree that this necessitates that only a specific set of
modes be allowed.

>   Again, if you can't fit every possible mode onto a given band (by the
>way, every possible mode means exactly that, not just modes that are
>commonly used by hams - otherwise, we would have APCO 25, in addition to

>lands for other purposes.

The portion of the band which is restricted to CW-only by the FCC is
tiny - small portions of the 2- and 6-meter bands, plus a portion of
80 which is CW-only for Novices and Technicians but not for anyone else.

Almost all of the non-phone portions of the band are *already* open to
various digital modulations (per the FCC regs and per the ARRL
bandplans and gentlepersons' agreements), and are quite extensively
used in that fashion today.

>From where I sit out here in the cheap seats, your own attitude
strikes me as more zealous, and less willing to cooperate and share,
than what I observe in the people I know who operate a lot of CW.

>   Considering the small, aggregate size of the HF bands, can you offer
>some suggestions as to how many modes can plausibly 'share the road?'

I don't think it's a question which can meaningfully be measured in
"number of modes". Some modes co-exist well, others do not.

I think it's a question of the number of _users_ of the band, at any
given time, and the type and quality of the conversations that they
can carry on.

>What modes must be forbidden so that the modes that you like can be >allowed?

Well, I tend to agree with the FCC that broad-spectrum audio (e.g. SSB with a DC-to-10-kHz bandwidth, or [worse] AM with a similar passband) is excessively wide - it's using more bandwidth than is reasonable for the conversation in question.

>   If you say that there are none, then perhaps we can have APCO >25, DV and DD on HF? What do you say to the hams who claim that AM >shouldn't be used on HF, because it uses to much bandwidth?

I think there's room for AM, and that SSB is more bandwidth-efficient, and that the de facto practice of having AM operators voluntarily hang out in a sub-portion of the HF band works pretty well.

I guess I just don't see why you're so intent on suppressing a mode of operation which allows quite a lot of individual operators to carry on multiple independent conversations within a limited bandwidth, at one of the lowest potential equipment costs per operator of any mode.

Granted, other modes may get more *total* data traffic through the same amount of spectrum width... but these modes tend to use more spectrum width per conversation/session, and you end up with less individual users of the band at any given time.

Applying a purely "economic" model to the ham spectrum (i.e. most traffic per available Hz of bandwidth) rather misses the point, I think, because it completely discounts all of the other values (personal enjoyment, learning, development of personal skills and knowledge) in ham radio. Ham radio is *NOT* a commercial service with just a single agenda.

Xref: g2news1.google.com rec.radio.amateur.moderated:2421

The recent discussions got me to thinking about how the current bands are partitioned. Taking a quick look at the current US allocations indicates these portions of the HF bands in which phone is not allowed (what I would have called "CW bands" in another era):

160: None
80: 3500-3600 20%
40: 7000-7125 41%
30: None
20: 14100-14150 42%

17:   18068-18110 42%
15:   21000-21200 44%
12:   24890-24940 40%
10:   28000-28300 18%

The conclusion is that, with some exceptions, an individual who is only interested in running SSB is excluded from around 40% of most of the US allocations. Is that reasonable? Is this bandplan maximizing the use of the resource?

One definition of "optimum allocation" is providing the same usability for operators of every mode. In order to accomplish this, one needs to know the number of people who wish to use each mode. It's not possible to directly and accurately obtain this number, but perhaps counting the number of QSOs in progress might approximate it.

In the absence of any data, I'm not going to speculate about whether 40% is a reasonable number. Have there been any attempts at measuring utilization in an objective way?

How about narrow band modes on the lower 1/3 of a band,
wide band on the upper 1/3, and any mode allowed in the
middle 1/3? It would be interesting to see what happens
in the middle 1/3.

> most of the US allocations. �

40%? Let's do the math...

Setting aside the five channels called 60 meters, an Extra Class ham in Region 2 has 3750 kHz of spectrum available in 9 bands:

160: 1800-2000
80/75: 3500-4000
40: 7000-7300
30: 10100-10150
20: 14000-14350
17: 18068-18168
15: 21000-21450
12: 24890-24990
10: 28000-29700

Of that 3750 kHz, 2743 kHz is available for voice modes, most typically SSB and AM. That's 73.1% of the available HF/MF amateur spectrum available for voice modes, and only 26.9% unavailable.

26.9%, not 40%.

Of course 160, 80/75 and 10 meters skew the numbers slightly.

But there is another factor to consider: DX 'phone.

It is common for DX stations to work 'phone down below the US 'phone bands, to avoid QRM from US hams, who greatly outnumber the DX. So when a band is open, the top end of the non-phone segments are frequently full of DX phone QSOs, and unusable by US CW/data operators. Every time the US phone subbands have been widened, the 'phone DXers have moved lower too.

The end result of this is that, when the bands are open for DX, the amount of band available to non-phone modes is effectively reduced below that 26.9%

> Is that reasonable? �Is this bandplan maximizing the use
> of the resource?

Depends what you mean by "maximize". The digital/data folks are squeezed into only 1217 kHz of the 3750, which is 32.45%.

> One definition of "optimum allocation" is providing the
> same usability for operators of every mode.

But is that a definition we hams should use without question? Should the users of wide modes be rewarded by getting more and more of a limited band?

Imagine if the price you paid for gas depended on the MPG of the car you drove, with low MPG cars paying less and high MPG cars paying more. Or suppose gasoline were rationed, and ration cards distributed the same way. Would that make the best use of a limited fuel supply, by rewarding those who use the most?

>�In order to accomplish this, one needs to
> know the number of people who wish to use each mode.
> �It's not possible
> to directly and accurately obtain this number,
> but perhaps counting the

That depends on when a sample is taken, though. During a contest or other operating activity that favors one mode, the results may be very unrepresentative.

> In the absence of any data, I'm not going to speculate about
> whether 40%
> is a reasonable number. �Have there been any attempts at
> measuring
> utilization in an objective way?

One way to consider is how the bands are used in a situation like Field Day, where voice, data and Morse Code modes are all in use simultaneously, and records of how many QSOs actually resulted available. Of course the results are somewhat skewed by the fact that 12, 17 and 30 meters are not part of Field Day, that FD isn't just HF, and the different skill levels needed to use various modes.

The USA band restrictions serve a very usefull purpose for the rest of
the world. It gives us a chance of finding a frequency that is not
full of american chatter. If the band is open the USA general section
is almost invariably solid with high power QRM.

That's a double-bladed sword you're waving there. Plenty of foreign
phone signals are to be found in the upper portions of various bands.
Where to the U.S. radio amateurs go to avoid the non-U.S. chatter.

I don't think there is any was to determine whether U.S. ops are running
high power or not. Propagation may favor one area over another; someone
might be running low power with an outstanding antenna system. Defining
the mere presence of signals as "QRM" might cause some to take offense.

One question which begs asking is why foreign phone stations should have
a shelter from U.S. stations when U.S. stations have no similar shelter
available to them? Another puzzler is why foreign CW stations seem to
get by just fine without a similar refuge from Americans.

Because there are so many more US stations than foreign ones in any particular country (except Japan 4th class). Working the USA is 1 DXCC country.

Here's a similar question: Why do 'phone stations need to be protected from data signals but CW signals don't need that protection? IOW, why not allow data modes in the 'phone bands?

That's an explanation, though perhaps not a valid one. We W's manage to work all the DX there is to work despite the presence of strong QRM from W QRM--both those who are ragchewing and those who are working DX. Things aren't the same as in the old days when many DX stations were rock bound or ran lesser quality equipment or had less than optimal antenna systems. In fact much of the world runs the same Kenwood, Icom, Yaesu and Ten-Tec equipment as the American stations. The garden variety foreign stations sometimes QRM's the rare stuff. Many of the garden variety foreigners are also in the chase for that same rare DX. The time is long past for divided phone band segments. I believe that the phone bands should be harmonized worldwide.

> Here's a similar question: Why do 'phone stations need to be protected

I think the answer to that is that CW ops are typically using narrow receiving filters while phone ops may be listening through 2.4 or 2.7 KHz filters. A little of that digital signal cacophony can wreak havoc with a phone QSO.

Actually, according to the DXCC list:

http://www.arrl.org/awards/dxcc/dxcclist.txt

somewhere between 3 and 19 DXCC "entities," depending on how you define "USA."

Three, if you consider only the 50 states:

```
K,W,N,AA-AK United States of America
KL7      Alaska
```

KH6-7	Hawaii

Fifteen more if you consider territories, possessions, and commonwealths:

KH0	Mariana Islands
KH1	Baker, Howland Islands
KH2	Guam
KH3	Johnston Island
KH4	Midway Island
KH5	Palmyra, Jarvis Islands
KH5/K	Kingman Reef
KH7K	Kure Island
KH8	American Samoa
KH8	Swains Island
KH9	Wake Island
KP1	Navassa Island
KP2	U.S. Virgin Islands
KP3,4	Puerto Rico
KP5	Desecheo Island

And then of course there's this one, under U.S. control, but energetically debated over whether it's a "jurisdiction" of the United States:

KG4	Guantanamo Bay

Sort of. Remember that often the DX is transmitting outside the US 'phone subband.

Be careful what you ask for.

In much if not most of the rest of the world, there are no subbands-by-mode. The amateur regs simply state which modes are allowed on each band, and leave the rest up to gentleman's agreements.

Harmonizing the US phone subbands to the rest of the world would mean either imposing US regs on other countries, or removing subbands-by-modes from US regs.

It seems to me that countries which do not have subbands-by-mode would resist following the US example and adding them, if for no other reason than that they'd no longer have a refuge from US 'phone QRM.

Proposals to remove subbands-by-mode from the US regs have met with clear and strong opposition from US hams. The recent proposal from the "Communications Think Tank", which would have eliminated subbands-by-mode, was strongly opposed in comments to FCC - so much that CTT removed the proposal. Any such proposal means "data in the phone bands", too.

Can't such interference be dealt with using a notch filter? A PSK31 signal is only a few dozen Hz wide, for example.

Even more basic, isn't it the responsibility of all operators to avoid transmitting on top of existing QSOs? Why would digital ops behave differently in this regard when faced with 'phone signals vs. CW signals?

Let's not forget that while 160m is not partitioned in the U.S., the
ARRL band plan for the band calls for no phone below 1843 KHz
Digital signals stay between 1800-1810 and the 1995-2000 portion is used
for experimental/beacon use.

Rare stuff, yes. Less rare stuff, not as often.

Point well taken. It works pretty well for the most part. Contests are a different matter. Let's take the 40m band as an example of when it doesn't work well. In a phone contest, foreign SSB stations can often be heard CQing as low as 7.010 despite the fact that the IARU bandplan calls for them to no go below 7.030 or .035 as I recall.

I'd like to get away from that "refuge" concept as some sort of foreign entitlement. I'd also like to get away from the idea that U.S. phone operation is "QRM". We're big boys and they're big boys. We don't piddle in our end of the pool and they don't piddle in theirs.

I'm not proposing that we do away with sub-bands by mode. What I'm proposing is to expand our phone bands down to 14.112 and 21.151 on SSB

...but a Pactor signal is a couple of hundred Hz wide and an RTTY signal
is only a little less. I can vary the width of my notch filter as well
as the center frequency. Can everyone do that? Passband tuning helps too.

> Even more basic, isn't it the responsibility of all operators to avoid

That's one reason that I think it is a good idea to maintain sub-bands
by mode. Many digital ops aren't listening to audio at all. Many CW
ops are using filters as narrow as 100 Hz. Phone ops may hear them but
they may not hear a phone signal, especially if it is weak.

N2EY@aol.com wrote:

> Can't such interference be dealt with using a notch filter? A PSK31 signal is only a few dozen Hz wide, for example.

The short answer is yes. The longer answer is that we have all these wonderful controls on our radios, sometimes we need to use them.

I learned a lot about CW filters, PBT, notching etc, with my PSK31 waterfall setup. As you invoke and adjust the various functions, the noise floor of the waterfall gives a nice graphic display of what each filter does.

> Even more basic, isn't it the responsibility of all operators to avoid transmitting on top of existing QSOs? Why would digital ops behave differently in this regard when faced with 'phone signals vs. CW signals?

Yes, and they don't as far as I know.

I think that on some bands, such as 20 meters, a person can accidentally stomp on another due to propagation, So often we only hear (or see) one side of the QSO. We fire up, and soon the Ham we can hear and can hear us tells us of our error.

I wonder what frequencies G4JCI is referring to? And note to G4JCI:I think you might have a typo in your call sign, there isn't any reference on QRZ to that call.

The call is perfectly OK since around 1977, in the UK we have a privacy option which stops the RSGB and others including us in callbooks etc. The call was previously ZS6N but that has since been re-issued to someone else after I left ZS land in 1982.

My point is that here in Europe we have to get by with a concealed wire antenna in the attic and QRP to avoid TVI complaints etc. All too often some clown (usually in the USA) can barely hear us and cranks up with a few kilowatts and an antenna farm. This same clown usually gets a 30/9 report from someone and chews the rag for half an hour at the same output instead of reducing power to the minimum required to maintain communications.

It is this inconsiderate behaviour which gives USA operators a bad reputation in the rest of the world. Of course there are plenty of good guys out there, as always it is the bad operators who set the bad standards.

That can happen on any HF band, I believe.

This issue was behind a lot of the protest over one aspect of the ARRL's now-withdrawn "sub-bands by bandwidth" proposal. The proposal had suggested opening up a much larger portion of the band to unattended and semi-attended digital stations (typically, email servers). Such systems are rather notorious for "stepping on" QSOs in progress, due in part to this "only can hear one half of the existing QSO" problem.

Right. Now add a couple hundred thousand US hams to that mix....

Point is, the foreign 'phone folks may not agree with you. How do we
in the USA
sell the idea that other countries should add limited phone subbands
to their rules?

OK, but what will happen is that the DX phones will simply move even
further down the band. It's happened every time.

So if one plops down on top of a CW QSO the mess is at least as bad as
if one plops down on a 'phone QSO. But 'phone QSOs are protected from
such interference while CW QSOs aren't.

>� I can vary the width of my notch filter as well

 helps too.

Yep. So does a good antenna system and lotsa watts.

The problem is that under current rules, as the US phone subbands get
wider, the CW/data subbands get narrower, and the spectrum-efficient
modes get squeezed more and more. That's just not right.

I think W5DXP's idea has the most merit: Wide modes at the top of the
band, narrow modes at the bottom, shared space in the middle.

True, I used 20 meters as an example because it is the most common band with the "worst" problem.

Many is the time that those robot stations have obliterated the PSK-31 segment of 20 meters. Two of them close the band. They don't check, they just start transmitting, and they keep it up, presumably until they get acknowledgment from another robot station.

It got so bad that Digipan added a decoder for the mode (no transmit) so that we gould catch the callsigns, record the disruption, and and turn them in to the FCC. Apparently this worked, because the problem is diminishing.

Amateur Radio Newsline" Report 1599 - April 4, 2008

Amateur Radio Newsline report number 1599 with a release date of
Friday, April 4tht, 2008 to follow in 5-4-3-2-1.

The following is a QST. KiwiSAT goes green, unlicensed devices play havoc with U-K repeaters, some good news on the ham radio numbers front and we ask how far you will drive to a hamfest if gasoline climbs to $4 a gallon or more. Find out how to answer the question on Amateur Radio Newsline" report number 1599 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: NZ KIWISAT TO BE HAM RADIO ENVIRO-BIRD

The planned New Zealand KiwiSAT ham radio satellite will also be a ham radio environmental research bird as well. Amateur Radio Newsline's Jim Meachen, ZL2BHF, is in Auckland with more:

--

Late word from AMSAT New Zealand is that the KiwiSAT ham radio satellite will now carry an additional special beacon available for use by radio amateurs around the world. This, to collect data on atmospheric aberrations and to assist with information collection directly associated with global warming concerns and carbon balance monitoring.

Details have yet to be finalized however the KiwiSAT structure has been modified to incorporate a second 70cm monopole antenna and a high level of filtering has been incorporated to minimize any desensitizing of the on-board 70 centimeter receivers. Once in space, the beacon will be switched as required but will normally be "on" for a given whole orbit to provide for data collection

Meantime, the KiwiSAT linear flight transponder is currently transmitting from the Whangaparaoa area with beam antennas pointing South. This transponder is inverting type to compensate for Doppler shift when in orbit. Its transmit Power is 2 Watts PEP. Its uplink is Uplink is from 435.265 to 435.235 MHz on lower sideband and the downlink 145.850 to 145.880 MHz on upper sideband. The inverting transponder is used to correct for Doppler shift.

Reporting from Auckland, I'm Jim Meachen, ZL2BHF, for the Amateur Radio Newsline.

--

KiwiSAT is currently planned for launch in mid to late 2009. Its planners say that KiwSAT is designed for low duty cycle modes and the use of FM wile not outright banned will be discouraged. Further information is on-line at www.kiwisat.org and we will have more ham radio space related items later on in this weeks news. (AMSAT ZL)

RADIO RULES: LEGAL UNLICENSED TRANSMITTERS HARMING UK REPEATER OPERATIONS

Unlicensed low power devices are creating a problem for some UHF repeater operations in the U-K. And its all quite legal. Jeramy Boot, G4NJH, explains:

--

A concern to both the amateur radio services and the MoD is the growing proliferation of Short Range Devices (SRDs) that are operating in the 70 cm band and raising the noise floor. A recent trial that used 433MHz channels as inputs for D-Star equipment tests proved to be unsuccessful due to the high noise floor.

According to an EU Directive the official SRD sub-band within 70cms is 433.05-434.79MHz using a maximum of 10mW ERP. This includes handheld Low Power Devices (LPDs) permitted to use FM voice on channels that include a number of repeater inputs.

I'm Jeramy Boot, G4NJH, and you are listening to the Amateur Radio

Newsline.

--

What if anything can be done by U-K hams to elevate this situation is, at airtime, unknown. (Adapted from GB2RS story)

**

RADIO POLITICS: RSGB SAYS 70 CM PETITION FILLED WITH MISINFORMATION

Still in the U-K, an electronic petition to Great Britain's Prime Minister's office titled "70 cmsband", has generated what is being described by the Radio Society of Great Britain as a "lemming like" response from the U-K amateur radio community. And from the society's public response, the petition also seems to have more than just annoyed the political leaders at the RSGB.

According to a notice posted at the Radio Society of Great Britain's website, the petition which originated just before the recent Easter break and has no foundation in truth. While the text of the petition could not be found on the web, it appears to have been derogatory in some way toward the RSGB. This because in its own posting the U-K national society asserts that it currently enjoys a good working relationship in negotiations with both telecommunications regulator Ofcom and the Ministry of Defense in regard to the 70 centimeter and other shared bands.

This RSGB says that the type of dis-information as that contained in the mysterious petition could undermine the relationship between the society and government policy makers. It also strongly advised all U-K hams to check the facts with the society before adding their name to such petitions.

And less we forget, the encyclopedia describes a lemming as a mouse-like rodent living in arctic or northern regions. The Norway lemming is the best known because of its spectacular periodic swarming that sometimes leads the migrating rodents to jump from cliffs into bodies of water as they migrate. (Adapted from GB2RS story)

**

RESTRUCTURING: US HAM POPULATION SHOWS MODERATE GROWTH

Some moderately good news regarding growth in numbers of FCC licensed radio amateurs. In his latest posting of license statistics to QRZ dot com, George Mc Couch, K3UD, says that it looks like overall Amateur Radio Service numbers have increased by 912 from January through March 2008.

According to George, the Technician and Technician Plus category had large increases while General had small increases. As expected. Novice and Advanced declined.

According to George, it appears as if the Technician license is still the most popular entry to the hobby for newcomers, making good gains over the last 2 quarters. Also, the movement to upgrade to Extra class is continuing. On the downside, it seems like the large movement from hams upgrading to General after the last round of restructuring has slowed to trickle over the last 6 months.

The bottom line. George says that this is the largest quarterly increase he has seen in a long time. You can read the good numbers on the news pages at www dot qrz dot com under the title Amateur Radio Growth in the 1st Quarter 2008: A look at the numbers. And our thanks to George Mc Couch, K3UD, for his ongoing volunteer effort to keep the ham radio public so well informed.

ENFORCEMENT: UK COMPONENT SALES TO PIRATE BROADCASTERS BRINGS HEAVY FINE

Turning to enforcement news, word that selling electronic parts that might wind up being used for illegal purposes can get you in trouble in the United Kingdom. Witness the case of two directors of a U-K radio parts supplier who recently pleaded guilty of supplying gear to what we in the U-S-A call pirate broadcasters.

The pleas were recently entered in Croydon Magistrates Court by the Broadcast Warehouse, which is a Croydon area radio and component supplier. According to a report in the London Register, the firm pleaded guilty to the charges after Broadcast Warehouse components were found in transmitters seized by U-K telecommunications regulator Ofcom from unlicensed stations.

The paper says that the company and the directors were each fined �10,000. An additional �90,000 was also assessed in court fees. The full story is on-line at www.theregister.co.uk/2008/03/28/ofcom_broadcast_warehouse/ (Southgate)

**

ENFORCEMENT: UNLICENSED STATION OPERATOR FINED $17000

The Federal Communications Commission has issued a o$17,000 monetary forfeiture to Craig Watkins for operating an unlicensed radio transmitter on the frequency 106.3 MHz in Bronx, NY and willfully violating the Communications Act by refusing an inspection of the station. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

On March 7, 2007, the FCC New York Office received a complaint from an engineer representing FM station WFAF, which operates on 106.3 MHz in Mt. Kisco, NY. The engineer reported that an illegal broadcast station operating on 106.3 MHz in Bronx, NY was causing interference to WFAF.

Three days later FCC Commission agents, using a mobile direction finding vehicle, monitored 106.3 MHz. The agents observed a broadcast on 106.3 and identified the source of the transmissions as an FM broadcasting antenna on a roof on East 229th Street in the Bronx..

Commission agents then conducted an investigation on the roof and observed an FM broadcast antenna mounted to the chimney of the building that was connected to a coaxial cable leading into a window of an upstairs apartment. The agents then knocked on the door to the upstairs apartment of the two-family house. When the man who answered the door was asked about the radio station, he stated that he was a visitor and that he knew nothing about the radio station. When agents asked him to turn off the transmitter, he did so. The man also advised the agents that the apartment's resident was not at home.

While speaking to the man at the upstairs apartment door, the agents were approached by the building owner. The agents advised the owner that an unauthorized radio station was being operated by someone in the upstairs apartment. He phoned the resident, Craig Watkins, and asked him to return to the residence. When Watkins arrived, the agents questioned him about the radio station and he admitted that there was radio equipment in his apartment, but he stated that no radio station existed. Watkins refused to allow the agents to inspect the equipment. The agents issued Watkins a Notice of Unlicensed Radio Operation for operating an unlicensed radio station on 106.3 MHz and for refusing to allow inspection of the radio equipment. After returning to the vehicle, the agents monitored 106.3 MHz and noted that the station was off the air.

But it did not stay off. On March 14th, a Commission agent, observed a radio broadcast on 106.3 MHz and identified the source of the transmissions as an FM broadcasting antenna on the roof of the same East 229th Street building. The agent took field strength measurements and determined that the signals being broadcast exceeded the limits for operation under Part 15 of the Rules and therefore required a license. So on July 27th the Commission's New York Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $17,000 to Watkins for operating an unlicensed radio transmitter and refusing to allow an inspection of the radio station equipment..

Watkins filed a response to the NAL on August 25, 2007. In his response, Watkins did not deny that there was radio station equipment in his apartment and he did not claim that the equipment was there without his permission. He did however claim that he did not know anything about the operation of a radio station. He indicated that he questioned his brother-in-law and his brother-in-law's friends about the radio station equipment and the antenna on the roof, but he was not able to obtain any information from them. Watkins did not address his refusal to allow the agents to inspect the equipment.

In affirming the fine, the FCC says that Watkins was identified by the building owner as the resident of the upstairs apartment and in his response to the Notice of Apparent Liability, Watkins states that he does resides at that address. Although Watkins does not admit to operating the radio station, he confirmed that there is radio station equipment in his apartment. Watkins does not state that such equipment was there without his permission. As a result, they found that Watkins provided services and facilities incidental to the transmission of communications by radio occurring on 106.3 MHz from his home.

The FCC says that it has previously held that liability for unlicensed operation may be assigned to any individual taking part in the operation of the unlicensed station, regardless of who else may be responsible for the operation. This is because Section 301 of the Communications Act says that no person shall use, or operate, radio transmission equipment without an FCC license.

Taken together, the FCC finds that Watkins's actions amounted to willful and repeated violations of the Communications Act and that the $17,000 fine is affirmed.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in the newsroom in Los Angeles.

--

Watkins was given the customary 30 days to pay or to file an appeal. (FCC)

**

WITH THE FCC: FCC SEEKS ENGINEERING SCHOOL GRADS FOR EIT

The Federal Communications Commission says it is seeking applications from engineering school graduates with superior academic credentials and an interest in communications engineering. This, for its 2008 Engineer-in-Training Program.

The Engineer-in-Training Program helps the commission recruit new and recent engineering school graduates to the agency and the field of communications. Recent engineering grads and candidates for graduation this spring are invited to apply for openings in the program's 2008 class.

Additional information is available on the FCC's EIT Program page at www.fcc.gov/EITprogram, or by contacting the FCC's Human Resources Office at area code 202 -418-0130. You can also e-mail for more information to <mailto:recruit%40fcc.gov>recruit@fcc.gov. (FCC)

**

HAM HAPPENINGS: THE K0S STRANGE ANTENNA CHALLANGE

Now here's one that should catch the attention of a lot of you. Erik Weaver N0EW sent along a note to tell us about the upcoming K Zero-S Strange Antenna Challenge slated for Memorial Day weekend, May 24th to the 26th.

What is a strange antenna challenge you ask? According to Erik, its an event where antennas are not permitted to be constructed of wire or metal pipe. Rather, those taking part must use their imagination to design radiators that are untraditional. Erik says that past antennas have included such items as metal folding chairs, chicken wire, fences, ladders, and even a trampoline.

If this sound like a fun way to spend Memorial Day weekend, you can get more information on-line at www.n0ew.org/k0s/ (N0EW)

**

HAM HAPPENINGS: THE WORLD WIDE ATV OPEN HOUSE

The A-T-V Newsletter is putting together a World Wide ATV Open House . In this case ATV means Amateur Television and it will be a virtual open house aimed at getting more members for Amateur Television groups and clubs while making all radio amateurs aware of ATV.

The Open House will run for 24 hours on a date somewhere between September and the first part of December yet to be finalized and will be open to all radio amateurs that want in on the fun. By taking advantage of the Voice over I P technology and the Internet and using streaming communications via Skype, Echolink, and the like, numerous virtual QSO can be made. For more information please e-mail world-wide-atv-repeater-network at hotmail dot com (N6IFU)

**

THE SOCIAL SCENE: AN INVITE TO JOIN THE FLYING HAMS REMAILRT

If you are a ham licensed as a pilot, a student pilot or just interested in aviation, you might want to consider joining the Flying Hams User Group. Formed by Daniel Hileman, N9WX, in Peru, Indiana, the group currently meets only in cyberspace using a yahoogroups remailer. Topics discussed range from technical issues to flight training to discussions of aircraft and the social aspect of both hobbies. To join just send a blank e-mail to <mailto:Flying_Hams-subscribe%40yahoogroups.com>Flying_Hams-subscribe@yahoogroups.com
(Flying Hams)

**

THE SOCIAL SCENE: LSDXA HAM COM DX DINNER IN JUNE

The Texas-based Lone Star DX Association has announced that Eric Scace, K3NA, will be the keynote speaker for the organizations DX Dinner Banquet at HamCom 2008. Eric Scace was the co-leader of the recent record breaking VP6DX Ducie Island operation. His presentation is long awaited. HamCom is slated for June 13th and 14th at the Plano Center, north of Dallas. More information about the DX dinner and the convention is on line at www.hamcom.org (LSDXA)

THE DIGITALIZATION OF HAM RADIO: NEW DVD ON DIGITAL VOICE MODES FROM ARVN

"Digital Voice for Amateur Radio" is a new DVD designed as a club meeting program to introduce hams to the various digital voice modes now coming to both the High Frequency and VHF bands.

Produced by well known documentary film maker Gary Pearce, KN4AQ, the 60 minute show highlights High Frequency systems such as those from AOR and WinDRM. It also delves into the emerging worlds of APCO P25 and D-Star that are in growing use in the VHF and UHF spectrum.

"Digital Voice for Amateur Radio" is being distributed by the North Carolina-based Amateur Radio Video Network. A free 8 minute preview along with pricing and ordering information is on-line at www.arvidnews.com. Questions go to Gary Pearce by e-mail to kn4aq at arvidnews dot com. (ARVIDNEWS)

**

HAM RADIO IN SPACE: ASTRO HAMS TO BE TRAINED

An Amateur Radio on the International Space Station (ARISS) training session has been planned for astronauts Bob Thirsk, VA3CSA, and Chris Hadfield, KC5RNJ. Hadfield is dual licensed as VA3OOG. The session will take place on Thursday, April 17. Thirsk is a scheduled crew member on Expedition 19 and Hadfield is his back-up. (ARISS)

**

HAM RADIO IN SPACE: WINGS OVER THE ROCKIES AIR & SPACE MUSEUM ADOPTS HAM RADIO

Ham radio is an integral part of the Wings Over The Rockies Air and Space Museum. Amateur Radio, using the call K0WAR has a prominent place in the Denver, Colorado museum with working stations located in the Avionics Room as well as the Space Station module exhibit.

The museum is Denver's newest historical and educational facility, and is dedicated to education, science, mathematics, technology and the rich history of flight in the Rocky Mountain region. One of its primary missions is to teach the younger generation about the science of aviation and space travel.

With 165,000 square feet in a 1930's-era Air Force hangar, 30 aircraft and special exhibits including Amateur Radio, Wings Over The Rockies is not only Denver's first aerospace museum, it is also the official air and space museum of the State of Colorado. More information about the museum and the part played in it by ham radio is on line at wings.rmhcn.org (KB6CC)

**

WORLDBEAT - BOSNIA: NEW CALL SIGNS ISSUED IN BOSNIA - HERTZEGOVENIA

Hitting the worldbeat, effective as of 23:00 U-T-C on March 21st, hams in Bosnia-Herzegovina were told to begin using their new E7 callsigns. Boris Knezovia, E73TW, says that the country's Communications Regulatory Agency has issued only two and three letter callsigns suffixes. Applications for one letter suffixes can be applied for starting April 14th and hopefully will be issued in late May. The International Telecommunications Union announced last August 8th that they replaced the callsign series prefix block of Bosnia-Herzegovina from T9 to E7. (Southgate)

**

WORLDBEAT - SABLE ISLAND: MAGIC BAND DXPEDITION ANNOUNCED

If you operate on the Magic Band, listen up. A 6-meter DXpedition to Sable Island scheduled to take place from June 25th through July 7th. The Ohio Penn DX Newsletter reports that VE3IKV, K5AND and W3CMP will be active from the rare enclave using the callsign CY0X on both CW and SSB.

Their fixed location 6 meter station will be in grid square FN93. The group will also try to activate rare grid GN03 using the callsign CY0RA if there is a solid opening. For this they are totting along a portable station with a 5 element yagi. In both cases the operators will be transmitting on 50.117 MHz and requests that those they might make contact with not send their grid square as it consumes valuable time during a DX opening.

This CY0X operation will also operate on 20 meters and 40 meter CW and SSB but the High Frequency operation will take lower priority over the 6 meters. QSL's go via VE3IKV and there is more on this upcoming operation is on-line at www.cy0x.com (OPDX)

**

RADIOSPORTS: 2007 FALL SPRINT SCORES NOW ON LINE

Jim Worsham, W4KXY, says that the results for the 2007 Fall Sprints, sponsored by the Southeastern VHF Society, are now available for viewing on line. Jim also says that all of the first, second and third place winners are invited to attend the Southeastern VHF Society conference in Orlando, Florida on April 25th and 26th to receive their award certificates at the Saturday night banquet. Information on attending the conference is available at www.svhfs.org. (W4KXY)

**

DX

In DX, word that ON5AX and ON3AX continue to be active from the Pacific locations on their three month tour. Their next stop is Australia with both operating portable V-K-4 through April 7th. QSL direct to ON5AX or ON3AX.

And here's one that hams all along the North American East coast with 4 meter receive capability might want to listen out for. Sunday 6th April between 09.00 and 12.00 UTC sees the RSGB 70MHz contest. All modes are permitted and the exchange is the normal R-S-T, serial number and locator. While hams this aide of the Atlantic cannot transmit on 70 MHz, they can listen in and use the contest as a propagation study of the 4 meter band.

Thanks to good weather conditions, the ship SA Agulhas has reached Marion Island and Petrus Kritzinger, ZS8T, is now there for at least 12 months. According to announced plans, the science work for the first few weeks will take precedence and ZS8T's activity won't start earlier than the end of April. This means any station using that call will be a pirate. Once operations are ready to start, an announcement will be made on the ZS8T.net website.

Lastly the 9-X-zero-R operation from Rwanda is now QRT. During the operation The multi-national DXpedition team made just under 63,000k QSO's. Of these about 31,000 of these were on CW, 26,000 on SSB and 4,900 on RTTY. If you worked this one, QSL via EA5RM.

Above from various DX news sources

**

RESULTS OF AR NEWSLINE POLL RESULTS: SHOULD D-STAR REPEATERS OPERATE ONLY IN REPEATER SUBBANDS?

Finally this week, the answer to the survey question that asked if D-Star digital voice repeaters be restricted to operate in the same designated subbands as traditional analog FM. The results were not at all surprising.

83% of those responding wanting D-Star repeaters to be restricted to existing repeater subbands. 17% said its OK for them to operate wherever in a given band that the owner might desire. These results seem to echo what's being read on various VHF and UHF remailers and public posting websites.

There is one caveat to this survey. Of the tens of thousands of you out there with web access, only 324 of you took the time to vote in this one. We have no idea if this means a lack of interest in the mode or that you are not that concerned about band planning. We do thank those of you who took the time to go to www.arnewsline.org to do so. (ARNewsline")

**

THAT FINAL ITEM - APRIL 2008 POLL: GAS PRICES VS. HAMFESTS

Now, we are switching gears for our next on-line survey. According to the Department of Energy, the national average retail price of a gallon of regular grade gasoline now about $3.40. The DoE has also long been hinting that the pre-tax cost could soon exceed $4 a gallon or more. Now, add on federal, state and even local taxes and a gallon could easily hit $4.50. With this in mind, we would like to know how high will the pump price of a gallon of gasoline have to go to keep you from driving that 50 or 60 mile round trip to your favorite hamfest of convention?

Taking part in this survey is easy. Just take your web browser over to www.arnewsline.org. Then scroll down the page until you see the word polls on the left hand side. Then just click on the dollar amount that's closest to the maximum you would bay for a gallon of gas before leaving the car in your driveway and bypassing this years event. The up to the minute results will be displayed once you have cast your vote.

We will leave this survey on-line through the end of April. Again, that's www.arnewsline.org on the left side of the page under the word polls to make your opinion known on this one. (ARNewsline")

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline". Our e-mail address is <mailto:newsline%40arnewsline.org>newsline@arnewsline.org. More information is available at Amateur Radio Newsline's" only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline", P.O. Box 660937, Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www dot YHOTY dot org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening.

Amateur Radio Newsline(tm) Report 1599 - April 4, 2008 -Updated

(Includes full text of Utah rescue story)

Amateur Radio Newsline report number 1599 with a release date of Friday, April 4tht, 2008 to follow in 5-4-3-2-1.

The following is a QST. KiwiSAT goes green, unlicensed devices play havoc with U-K repeaters, some good news on the ham radio numbers front and we ask how far you will drive to a hamfest if gasoline climbs to $4 a gallon or more. Find out how to answer the question on Amateur Radio Newsline(tm) report number 1599 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: NZ KIWISAT TO BE HAM RADIO ENVIRO-BIRD

The planned New Zealand KiwiSAT ham radio satellite will also be a ham radio environmental research bird as well. Amateur Radio Newsline's Jim Meachen, ZL2BHF, is in Auckland with more:

--

Late word from AMSAT New Zealand is that the KiwiSAT ham radio satellite will now carry an additional special beacon available for use by radio amateurs around the world. This, to collect data on atmospheric aberrations and to assist with information collection directly associated with global warming concerns and carbon balance monitoring.

Details have yet to be finalized however the KiwiSAT structure has been modified to incorporate a second 70cm monopole antenna and a high level of filtering has been incorporated to minimize any desensitizing of the on-board 70 centimeter receivers. Once in space, the beacon will be switched as required but will normally be "on" for a given whole orbit to provide for data collection

Meantime, the KiwiSAT linear flight transponder is currently transmitting from the Whangaparaoa area with beam antennas pointing South. This transponder is inverting type to compensate for Doppler shift when in orbit. Its transmit Power is 2 Watts PEP. Its uplink is Uplink is from 435.265 to 435.235 MHz on lower sideband and the downlink 145.850 to 145.880 MHz on upper sideband. The inverting transponder is used to correct for Doppler shift.

Reporting from Auckland, I'm Jim Meachen, ZL2BHF, for the Amateur Radio Newsline.

--

KiwiSAT is currently planned for launch in mid to late 2009. Its planners say that KiwSAT is designed for low duty cycle modes and the use of FM wile not outright banned will be discouraged. Further information is on-line at www.kiwisat.org and we will have more ham radio space related items later on in this weeks news. (AMSAT ZL)

**

RADIO RULES: LEGAL UNLICENSED TRANSMITTERS HARMING UK REPEATER OPERATIONS

Unlicensed low power devices are creating a problem for some UHF repeater operations in the U-K. And its all quite legal. Jeramy Boot, G4NJH, explains:

--

A concern to both the amateur radio services and the MoD is the growing proliferation of Short Range Devices (SRDs) that are operating in the 70 cm band and raising the noise floor. A recent trial that used 433MHz channels as inputs for D-Star equipment tests proved to be unsuccessful due to the high noise floor.

According to an EU Directive the official SRD sub-band within 70cms is 433.05-434.79MHz using a maximum of 10mW ERP. This includes handheld Low Power Devices (LPDs) permitted to use FM voice on channels that include a number of repeater inputs.

I'm Jeramy Boot, G4NJH, and you are listening to the Amateur Radio Newsline.

--

What if anything can be done by U-K hams to elevate this situation is, at airtime, unknown. (Adapted from GB2RS story)

**

RADIO POLITICS: RSGB SAYS 70 CM PETITION FILLED WITH MISINFORMATION

Still in the U-K, an electronic petition to Great Britain's Prime Minister's office titled "70 cmsband", has generated what is being described by the Radio Society of Great Britain as a "lemming like" response from the U-K amateur radio community. And from the society's public response, the petition also seems to have more than just annoyed the political leaders at the RSGB.

According to a notice posted at the Radio Society of Great Britain's website, the petition which originated just before the recent Easter break and has no foundation in truth. While the text of the petition could not be found on the web, it appears to have been derogatory in some way toward the RSGB. This because in its own posting the U-K national society asserts that it currently enjoys a good working relationship in negotiations with both telecommunications regulator Ofcom and the Ministry of Defense in regard to the 70 centimeter and other shared bands.

This RSGB says that the type of dis-information as that contained in the mysterious petition could undermine the relationship between the society and government policy makers. It also strongly advised all U-K hams to check the facts with the society before adding their name to such petitions.

And less we forget, the encyclopedia describes a lemming as a mouse-like rodent living in arctic or northern regions. The Norway lemming is the best known because of its spectacular periodic swarming that sometimes leads the migrating rodents to jump from cliffs into bodies of water as they migrate. (Adapted from GB2RS story)

RESTRUCTURING: US HAM POPULATION SHOWS MODERATE GROWTH

Some moderately good news regarding growth in numbers of FCC licensed radio amateurs. In his latest posting of license statistics to QRZ dot com, George Mc Couch, K3UD, says that it looks like overall Amateur Radio Service numbers have increased by 912 from January through March 2008.

According to George, the Technician and Technician Plus category had large increases while General had small increases. As expected. Novice and Advanced declined.

According to George, it appears as if the Technician license is still the most popular entry to the hobby for newcomers, making good gains over the last 2 quarters. Also, the movement to upgrade to Extra class is continuing. On the downside, it seems like the large movement from hams upgrading to General after the last round of restructuring has slowed to trickle over the last 6 months.

The bottom line. George says that this is the largest quarterly increase he has seen in a long time. You can read the good numbers on the news pages at www dot qrz dot com under the title Amateur Radio Growth in the 1st Quarter 2008: A look at the numbers. And our thanks to George Mc Couch, K3UD, for his ongoing volunteer effort to keep the ham radio public so well informed.

RESCUE RADIO: HAM RADIO TO THE RESCUE WHERE CELLPHONES DON'T WORK

Ham radio has once again proven it can provide emergency communications to the outside world when cellphones can't. Amateur Radio Newsline's Don Carlson, KQ6FM, is in Reno with more:

--

In the most recent instance KSL television reported on March 28th that a driver passing through Utah's remote Logan Canyon lost control of her truck in the snow. The vehicle fell more than 100 feet over a cliff. Two of her three passengers were thrown out.

Other drivers stopped to help, but with no cell phone coverage in the isolated area, it was at least a 30 minute drive to make a phone call. But Eldon Kearl, K7OGM, of Fish Haven, Idaho, had a communications system that could call for assistance out of the remote canyon area.

Using his portable ham gear, Kearl contacted Roger Ellis, KE7THE, of Logan, Utah. Ellis, who says he's still new to Amateur Radio says that he was able to relay information to the 911 emergency response dispatchers. A half hour later, help was on the scene.

Late word is that everyone survived the crash with only minor injuries. The Utah Highway Patrol says if not for Kearl and Ellis getting help to the scene so quickly, those injuries could have become a lot worse.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

You can see the entire KSL report that includes interviews with both K7OGM and KE7THE at www.ksl.com/index.php?nid=148&sid=2960552# (N9MSM)

ENFORCEMENT: UK COMPONENT SALES TO PIRATE BROADCASTERS BRINGS HEAVY FINE

Turning to enforcement news, word that selling electronic parts that might wind up being used for illegal purposes can get you in trouble in the United Kingdom. Witness the case of two directors of a U-K radio parts supplier who recently pleaded guilty of supplying gear to what we in the U-S-A call pirate broadcasters.

The pleas were recently entered in Croydon Magistrates Court by the Broadcast Warehouse, which is a Croydon area radio and component supplier. According to a report in the London Register, the firm pleaded guilty to the charges after Broadcast Warehouse components were found in transmitters seized by U-K telecommunications regulator Ofcom from unlicensed stations.

The paper says that the company and the directors were each fined �10,000. An additional �90,000 was also assessed in court fees. The full story is on-line at www.theregister.co.uk/2008/03/28/ofcom_broadcast_warehouse/ (Southgate)

**

ENFORCEMENT: UNLICENSED STATION OPERATOR FINED $17000

The Federal Communications Commission has issued a o$17,000 monetary forfeiture to Craig Watkins for operating an unlicensed radio transmitter on the frequency 106.3 MHz in Bronx, NY and willfully violating the Communications Act by refusing an inspection of the station. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

On March 7, 2007, the FCC New York Office received a complaint from an engineer representing FM station WFAF, which operates on 106.3 MHz in Mt. Kisco, NY.   The engineer reported that an illegal broadcast station operating on 106.3 MHz in Bronx, NY was causing interference to WFAF.

Three days later FCC Commission agents, using a mobile direction finding vehicle, monitored 106.3 MHz. The agents observed a broadcast on 106.3 and identified the source of the transmissions as an FM broadcasting antenna on a roof on East 229th Street in the Bronx..

Commission agents then conducted an investigation on the roof and observed an FM broadcast antenna mounted to the chimney of the building that was connected to a coaxial cable leading into a window of an upstairs apartment. The agents then knocked on the door to the upstairs apartment of the two-family house. When the man who answered the door was asked about the radio station, he stated that he was a visitor and that he knew nothing about the radio station. When agents asked him to turn off the transmitter, he did so. The man also advised the agents that the apartment's resident was not at home.

While speaking to the man at the upstairs apartment door, the agents were approached by the building owner. The agents advised the owner that an unauthorized radio station was being operated by someone in the upstairs apartment. He phoned the resident, Craig Watkins, and asked him to return to the residence. When Watkins arrived, the agents questioned him about the radio station and he admitted that there was radio equipment in his apartment, but he stated that no radio station existed. Watkins refused to allow the agents to inspect the equipment. The agents issued Watkins a Notice of Unlicensed Radio Operation for operating an unlicensed radio station on 106.3 MHz and for refusing to allow inspection of the radio equipment. After returning to the vehicle, the agents monitored 106.3 MHz and noted that the station was off the air.

But it did not stay off. On March 14th, a Commission agent, observed a radio broadcast on 106.3 MHz and identified the source of the transmissions as an FM broadcasting antenna on the roof of the same East 229th Street building. The agent took field strength measurements and determined that the signals being broadcast exceeded the limits for operation under Part 15 of the Rules and therefore required a license. So on July 27th the Commission's New York Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $17,000 to Watkins for operating an unlicensed radio transmitter and refusing to allow an inspection of the radio station equipment..

Watkins filed a response to the NAL on August 25, 2007. In his response, Watkins did not deny that there was radio station equipment in his apartment and he did not claim that the equipment was there without his permission. He did however claim that he did not know anything about the operation of a radio station. He indicated that he questioned his brother-in-law and his brother-in-law's friends about the radio station equipment and the antenna on the roof, but he was not able to obtain any information from them. Watkins did not address his refusal to allow the agents to inspect the equipment.

In affirming the fine, the FCC says that Watkins was identified by the building owner as the resident of the upstairs apartment and in his response to the Notice of Apparent Liability, Watkins states that he does resides at that address. Although Watkins does not admit to operating the radio station, he confirmed that there is radio station equipment in his apartment. Watkins does not state that such equipment was there without his permission. As a result, they found that Watkins provided services and facilities incidental to the transmission of communications by radio occurring on 106.3 MHz from his home.

The FCC says that it has previously held that liability for unlicensed operation may be assigned to any individual taking part in the operation of the unlicensed station, regardless of who else may be responsible for the operation. This is because Section 301 of the Communications Act says that no person shall use, or operate, radio transmission equipment without an FCC license.

Taken together, the FCC finds that Watkins's actions amounted to willful and repeated violations of the Communications Act and that the $17,000 fine is affirmed.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in the newsroom in Los Angeles.

--

Watkins was given the customary 30 days to pay or to file an appeal. (FCC)

**

WITH THE FCC: FCC SEEKS ENGINEERING SCHOOL GRADS FOR EIT

The Federal Communications Commission says it is seeking applications from engineering school graduates with superior academic credentials and an interest in communications engineering. This, for its 2008 Engineer-in-Training Program.

The Engineer-in-Training Program helps the commission recruit new and recent engineering school graduates to the agency and the field of communications. Recent engineering grads and candidates for graduation this spring are invited to apply for openings in the program's 2008 class.

Additional information is available on the FCC's EIT Program page at www.fcc.gov/EITprogram, or by contacting the FCC's Human Resources Office at area code 202 -418-0130. You can also e-mail for more information to recruit@fcc.gov. (FCC)

**

HAM HAPPENINGS: THE K0S STRANGE ANTENNA CHALLANGE

Now here's one that should catch the attention of a lot of you. Erik Weaver N0EW sent along a note to tell us about the upcoming K Zero-S Strange Antenna Challenge slated for Memorial Day weekend, May 24th to the 26th.

What is a strange antenna challenge you ask? According to Erik, its an event where antennas are not permitted to be constructed of wire or metal pipe. Rather, those taking part must use their imagination to design radiators that are untraditional. Erik says that past antennas have included such items as metal folding chairs, chicken wire, fences, ladders, and even a trampoline.

If this sound like a fun way to spend Memorial Day weekend, you can get more information on-line at www.n0ew.org/k0s/ (N0EW)

**

HAM HAPPENINGS: THE WORLD WIDE ATV OPEN HOUSE

The A-T-V Newsletter is putting together a World Wide ATV Open House . In this case ATV means Amateur Television and it will be a virtual open house aimed at getting more members for Amateur Television groups and clubs while making all radio amateurs aware of ATV.

The Open House will run for 24 hours on a date somewhere between September and the first part of December yet to be finalized and will be open to all radio amateurs that want in on the fun. By taking advantage of the Voice over I P technology and the Internet and using streaming communications via Skype, Echolink, and the like, numerous virtual QSO can be made. For more information please e-mail world-wide-atv-repeater-network at hotmail dot com (N6IFU)

**

THE SOCIAL SCENE: AN INVITE TO JOIN THE FLYING HAMS REMAILRT

If you are a ham licensed as a pilot, a student pilot or just interested in aviation, you might want to consider joining the Flying Hams User Group. Formed by Daniel Hileman, N9WX, in Peru, Indiana, the group currently meets only in cyberspace using a yahoogroups remailer. Topics discussed range from technical issues to flight training to discussions of aircraft and the social aspect of both hobbies. To join just send a blank e-mail to Flying_Hams-subscribe@yahoogroups.com (Flying Hams)

**

THE SOCIAL SCENE: LSDXA HAM COM DX DINNER IN JUNE

The Texas-based Lone Star DX Association has announced that Eric Scace, K3NA, will be the keynote speaker for the organizations DX Dinner Banquet at HamCom 2008. Eric Scace was the co-leader of the recent record breaking VP6DX Ducie Island operation. His presentation is long awaited. HamCom is slated for June 13th and 14th at the Plano Center, north of Dallas. More information about the DX dinner and the convention is on line at www.hamcom.org (LSDXA)

THE DIGITALIZATION OF HAM RADIO: NEW DVD ON DIGITAL VOICE MODES FROM ARVN

"Digital Voice for Amateur Radio" is a new DVD designed as a club meeting program to introduce hams to the various digital voice modes now coming to both the High Frequency and VHF bands.

Produced by well known documentary film maker Gary Pearce, KN4AQ, the 60 minute show highlights High Frequency systems such as those from AOR and WinDRM. It also delves into the emerging worlds of APCO P25 and D-Star that are in growing use in the VHF and UHF spectrum.

"Digital Voice for Amateur Radio" is being distributed by the North Carolina-based Amateur Radio Video Network. A free 8 minute preview along with pricing and ordering information is on-line at www.arvidnews.com. Questions go to Gary Pearce by e-mail to kn4aq at arvidnews dot com. (ARVIDNEWS)

**

HAM RADIO IN SPACE: ASTRO HAMS TO BE TRAINED

An Amateur Radio on the International Space Station (ARISS) training session has been planned for astronauts Bob Thirsk, VA3CSA, and Chris Hadfield, KC5RNJ. Hadfield is dual licensed as VA3OOG. The session will take place on Thursday, April 17. Thirsk is a scheduled crew member on

Expedition 19 and Hadfield is his back-up. (ARISS)

**

HAM RADIO IN SPACE: WINGS OVER THE ROCKIES AIR & SPACE MUSEUM ADOPTS HAM RADIO

Ham radio is an integral part of the Wings Over The Rockies Air and Space Museum. Amateur Radio, using the call K0WAR has a prominent place in the Denver, Colorado museum with working stations located in the Avionics Room as well as the Space Station module exhibit.

The museum is Denver's newest historical and educational facility, and is dedicated to education, science, mathematics, technology and the rich history of flight in the Rocky Mountain region. One of its primary missions is to teach the younger generation about the science of aviation and space travel.

With 165,000 square feet in a 1930's-era Air Force hangar, 30 aircraft and special exhibits including Amateur Radio, Wings Over The Rockies is not only Denver's first aerospace museum, it is also the official air and space museum of the State of Colorado. More information about the museum and the part played in it by ham radio is on line at wings.rmhcn.org (KB6CC)

**

WORLDBEAT - BOSNIA: NEW CALL SIGNS ISSUED IN BOSNIA - HERTZEGOVENIA

Hitting the worldbeat, effective as of 23:00 U-T-C on March 21st, hams in Bosnia-Herzegovina were told to begin using their new E7 callsigns. Boris Knezovia, E73TW, says that the country's Communications Regulatory Agency has issued only two and three letter callsigns suffixes. Applications for one letter suffixes can be applied for starting April 14th and hopefully will be issued in late May. The International Telecommunications Union announced last August 8th that they replaced the callsign series prefix block of Bosnia-Herzegovina from T9 to E7. (Southgate)

**

WORLDBEAT - SABLE ISLAND: MAGIC BAND DXPEDITION ANNOUNCED

If you operate on the Magic Band, listen up. A 6-meter DXpedition to Sable Island scheduled to take place from June 25th through July 7th. The Ohio Penn DX Newsletter reports that VE3IKV, K5AND and W3CMP will be active from the rare enclave using the callsign CY0X on both CW and SSB.

Their fixed location 6 meter station will be in grid square FN93. The group will also try to activate rare grid GN03 using the callsign CY0RA if there is a solid opening. For this they are totting along a portable station with a 5 element yagi. In both cases the operators will be transmitting on 50.117 MHz and requests that those they might make contact with not send their grid square as it consumes valuable time during a DX opening.

This CY0X operation will also operate on 20 meters and 40 meter CW and SSB but the High Frequency operation will take lower priority over the 6 meters. QSL's go via VE3IKV and there is more on this upcoming operation is on-line at www.cy0x.com (OPDX)

**

RADIOSPORTS: 2007 FALL SPRINT SCORES NOW ON LINE

Jim Worsham, W4KXY, says that the results for the 2007 Fall Sprints, sponsored by the Southeastern VHF Society, are now available for viewing on line. Jim also says that all of the first, second and third place winners are invited to attend the Southeastern VHF Society conference in Orlando, Florida on April 25th and 26th to receive their award certificates at the Saturday night banquet. Information on attending the conference is available at www.svhfs.org. (W4KXY)

**

DX

In DX, word that ON5AX and ON3AX continue to be active from the Pacific locations on their three month tour. Their next stop is Australia with both operating portable V-K-4 through April 7th. QSL direct to ON5AX or ON3AX.

And here's one that hams all along the North American East coast with 4 meter receive capability might want to listen out for. Sunday 6th April between 09.00 and 12.00 UTC sees the RSGB 70MHz contest. All modes are permitted and the exchange is the normal R-S-T, serial number and locator. While hams this aide of the Atlantic cannot transmit on 70 MHz, they can listen in and use the contest as a propagation study of the 4 meter band.

Thanks to good weather conditions, the ship SA Agulhas has reached Marion Island and Petrus Kritzinger, ZS8T, is now there for at least 12 months. According to announced plans, the science work for the first few weeks will take precedence and ZS8T's activity won't start earlier than the end of April. This means any station using that call will be a pirate. Once operations are ready to start, an announcement will be made on the ZS8T.net website.

Lastly the 9-X-zero-R operation from Rwanda is now QRT. During the operation The multi-national DXpedition team made just under 63,000k QSO's. Of these about 31,000 of these were on CW, 26,000 on SSB and 4,900 on RTTY. If you worked this one, QSL via EA5RM.

Above from various DX news sources

**

RESULTS OF AR NEWSLINE POLL RESULTS: SHOULD D-STAR REPEATERS OPERATE ONLY IN REPEATER SUBBANDS?

Finally this week, the answer to the survey question that asked if D-Star digital voice repeaters be restricted to operate in the same designated subbands as traditional analog FM. The results were not at all surprising.

83% of those responding wanting D-Star repeaters to be restricted to existing repeater subbands. 17% said its OK for them to operate wherever in a given band that the owner might desire. These results seem to echo what's being read on various VHF and UHF remailers and public posting websites.

There is one caveat to this survey. Of the tens of thousands of you out there with web access, only 324 of you took the time to vote in this one. We have no idea if this means a lack of interest in the mode or that you are not that concerned about band planning. We do thank those of you who took the time to go to www.arnewsline.org to do so. (ARNewsline(tm))

**

THAT FINAL ITEM - APRIL 2008 POLL: GAS PRICES VS. HAMFESTS

Now, we are switching gears for our next on-line survey. According to the Department of Energy, the national average retail price of a gallon of regular grade gasoline now about $3.40. The DoE has also long been hinting that the pre-tax cost could soon exceed $4 a gallon or more. Now, add on federal, state and even local taxes and a gallon could easily hit $4.50. With this in mind, we would like to know how high will the pump price of a gallon of gasoline have to go to keep you from driving that 50 or 60 mile round trip to your favorite hamfest of convention?

Taking part in this survey is easy. Just take your web browser over to www.arnewsline.org. Then scroll down the page until you see the word polls on the left hand side. Then just click on the dollar amount that's closest to the maximum you would bay for a gallon of gas before leaving the car in your driveway and bypassing this years event. The up to the minute results will be displayed once you have cast your vote.

We will leave this survey on-line through the end of April. Again, that's www.arnewsline.org on the left side of the page under the word polls to make your opinion known on this one. (ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio

Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

Before we go we want to remind you that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year is now open. Any licensed radio amateur age 18 or younger residing in the United States or Canada is eligible for the award. Full details and both downloadable and on-line nominating forms are in cyberspace at www dot YHOTY dot org.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jeff Clark, K8JAC, saying 73 and we thank you for listening.

==> FOURTEENTH ANNUAL AES SUPERFEST A SUPER SUCCESS

ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, attended the 14th Annual AES Superfest <http://www.aesham.com/superfest.shtml> at the headquarters store of Amateur Electronic Supply in Milwaukee, Wisconsin March

28-29. This event is an ARRL sanctioned hamfest that included forums, VE testing (sponsored by MRAC), DXCC card checking and a fox hunt. ARRL Central Division Director Dick Isely, W9GIG; Vice Director Howie Huntington, K9KM, and ARRL Wisconsin Section Manager Don Michalski, W9IXG, were also on hand for the event.

More than 30 vendors made the trek to Wisconsin to show off their wares. "It was fun to visit with all of the AES staff and sales people, too. I enjoyed discussing our new publications, especially the new format of the 'The ARRL Repeater Directory,'" Inderbitzen said.

ARRL Volunteer Counsel Jim O'Connell, W9WU, offered a forum Saturday afternoon -- Legal Issues for Hams -- giving advice for avoiding restrictive antenna covenants, presenting a case for installing a tower (before legislative or zoning officials) and information on the latest court rulings on RFI and PRB-1. ARRL Instructor Gordon West, WB6NOA, presented a forum, encouraging the crowd to recruit, mentor and most of all, have fun!

Inderbitzen heard from many hams while he was at the ARRL booth at Superfest: "Most of the comments I received were very positive. There were lots of nice words about the 'direction' of ARRL, the layout of QST and the one-on-one experiences members have with the ARRL staff and officials. A few folks mentioned having great visits to ARRL headquarters."

On March 27, the night before Superfest, Inderbitzen attended a meeting of the Milwaukee Radio Amateurs' Club (MRAC) and spoke about sharing the passion for Amateur Radio with friends and family members. This club, founded in 1917, will celebrate 90 years of ARRL Club Affiliation in 2009. In recognition of this milestone, Inderbitzen presented MRAC President Howard Parks, AB9FH, with an ARRL Recognition Award "for its commitment to Amateur Radio and to the American Radio Relay League."

==> ARRL RECOGNITION AWARDS AVAILABLE

As a service to its members, the ARRL now offers custom awards for clubs, groups and individuals for recognition and achievement, offering a wide range of styles and price levels. Each award is customized with your text and the ARRL logo. The ARRL has introduced these items in response to requests by members.

Products offered include a tan leather rectangular key fob with a call sign on one side and the ARRL diamond on the other; a rosewood pen and pencil set with personalization available on the pen and pencil, as well as the presentation box; an 8x10 inch wood plaque with blue plate engraved with up to 14 lines of gold text; a swiveling wood desk clock that holds a photo or an insert -- personalize this with up to 25 characters on two lines, and a beautiful crystal 3-inch etched globe on a crystal base, presented in a velvet-lined gift box.

Do you have that one ham in your group who comes out every Field Day, rain or shine, who stays from beginning to end, helping out in any way possible? Acknowledge their involvement with a beautiful gift that shows how much you value their service. What about the ham in your club that has been a member for 25 years and has yet to miss a meeting? Show them how much you appreciate their contribution with a small personalized token. Do you have an Elmer you would like to thank with more than words? A personalized gift with their name and call sign on it would remind them of you every time they use it.

Each item features the ARRL diamond logo. Award orders will be processed and delivered within 20 working days. View the entire award product line, as well as ARRL clothing items, at the Barker Specialties Web site <http://www.barkerstores.com/arrl>.

==> GET READY FOR WORLD AMATEUR RADIO DAY ON APRIL 18

Each year on the anniversary of its founding, April 18, the International Amateur Radio Union (IARU) marks World Amateur Radio Day. On this 83rd anniversary of its inaugural meeting in Paris, the IARU dedicates World Amateur Radio Day to the future of Amateur Radio with its theme, "Amateur Radio: A Foundation for Technical Knowledge."

It is no secret that many professionals in the field of radio, TV, communications and electronics have started their technical education as young radio amateurs. Although Amateur Radio has a different face nowadays -- Digital Communications, Voice over Internet Protocol, Satellite up- and downlinks and more -- it is even of greater value as a foundation for technical knowledge for youngsters. And much more -- it is and should be used as a unique attraction for future young radio amateurs.

World Amateur Radio Day provides an occasion to promote and publicize Amateur Radio. Amateur Radio clubs are encouraged to find suitable ways of celebrating World Amateur Radio Day. Many ways can be considered -- inviting youngsters to visit radio clubs, showing up on the air with a special call sign, organizing a station in a public area with media coverage or publicly honoring amateurs who have made significant contributions. Whatever method is chosen, clubs should think about publishing a press release for the media, giving the background to World Amateur Radio Day and promoting the value of Amateur Radio as a foundation for a technical career.

The ARRL will be very pleased to hear how Amateur Radio clubs chose to celebrate World Amateur Radio Day. Share your stories and photos with us, so that they may be shared with the Amateur Radio community. E-mail your submissions to ARRL Affiliated Club/Mentor Program Supervisor Norm Fusaro, W3IZ <clubs@arrl.org>. Please be sure to put "World Amateur Radio Day" in the subject line. -- Information provided by IARU

==> ARRL COMPILES COMPLETE WORKS OF LARSON E. RAPP, WIOU

Thanks to the efforts of ARRL volunteer Bob Allison, WB1GCM, the League has assembled the complete known works of noted QST author Larson E. Rapp, WIOU <http://www.arrl.org/tis/info/larson/>. Rapp's remarkable contributions spanned a period of more than three decades (1941-1962, 1972), primarily during the month of April. Rapp was said to be from Kippering-on-the-Charles, Massachusetts, just off Route 128.

"Like most visionaries unafraid of pushing technology beyond conventional limitations, Larson at times was controversial among his peers and contemporaries," ARRL Lab Engineer Mike Gruber, W1MG, said. "You can now be the judge of just how well Rapp's theorems and trademark 'radical approach' have withstood the test of time."

The first Rapp article, "Putting Dynamic Prognostication to Work," appeared in the April 1941 issue of QST. In the article, Rapp expounded on his efficient one-tube transmitter. When Rapp discussed the tuning of the transmitter, he said, "The high coupling efficiency of the unit results in a minimum plate current of resonance of about 0.9 ma. at 7 Mc. This is too low a value to show on the 0-250 milliammeter that should be used for the circuit, so you'll have to take our word for it." The transmitter was described as having a "simple construction of the chassis which is made from cardboard fastened by wire staples and glue. The underside is covered with tin foil."

In "The Circular Band Theorem: Operational Advantages of Concentric Frequency Allocations" [April 1946], Rapp theorized if the FCC assigned "amateur frequencies in concentric circles instead of bands [the end result would be] the consequent elimination of out-of-band operation and band edge crowding...[making] it possible to work someone 40 or 50 kc. removed from one's frequency." This was brought on by Rapp's claim that amateurs, "realizing that after calling 'CQ' they had to start listening somewhere and that somewhere was usually the edge of the band." Rapp called for bands to be designed in "concentric circles, and the beginners should be encouraged to start in the smallest circle. Thus, even if one managed to get out of band -- we don't see how he could, but someone would find a way! -- he would still be inside the next circle and amateur radio would have no black mark against it for out-of-band operation. Further, the fact that a beginner was encouraged to start in the inner circle would make him feel like he was one of the boys right off, being allowed into the inner circle!"

In the April 1960 issue of QST, a phony full-page ad announced the formation of "Larsen E. Enterprises, Inc," supposedly off Route 128 in Kippering-on-the-Charles, Massachusetts, with Larsen E. Rapp as president. Bearing a "Not a Advertisement" disclaimer, the ad offered customers free access to the company's air-conditioned "Wonder Workshop" with each kit purchase. "If you don't have the time to assemble the entire kit yourself, one of our engineers will be glad to do it for you, just for the pleasure it gives him," the ad promised. "No tipping please." In the "Print Shoppe," customers could purchase "authentic reproductions of the rarest QSL cards in the world." The price included having the company's "patient penman" fill in the card with your call sign and a signal report, duplicating the original ink and handwriting.

Rapp himself said that "In assembling this list of my articles and letters over the years, I noticed that QST always chose to publish them in the springtime. This practice was especially meaningful to me as spring has historically been a time of new beginnings and in our radio hobby, a time for new insights into old technical problems. I hope you, too, will be helped and inspired by these writings of an old ham."

==> ANNUAL ARMED FORCES DAY CROSSBAND TEST SCHEDULED FOR MAY

The Army, Air Force, Navy, Marine Corps and Coast Guard are co-sponsoring the annual Military/Amateur Radio communications tests in celebration of the 58th anniversary of Armed Forces Day (AFD). Although the actual Armed Forces Day is celebrated on May 17, the AFD Military/Amateur Crossband Communications Test will be conducted on May 10 to prevent conflict with the Dayton Hamvention, scheduled for May 16-18.

The annual celebration features traditional military to amateur crossband communications SSB voice tests and copying the Secretary of Defense message via digital modes. These tests give Amateur Radio operators and short wave listeners an opportunity to demonstrate their individual technical skills and to receive recognition from the Secretary of Defense and/or the appropriate military radio station for their proven expertise. QSL cards will be provided to those stations making contact with the military stations. Special commemorative certificates will be awarded to anyone who receives and copies the digital Armed Forces Day message from the Secretary of Defense.

Look for schedules and frequencies of participating military stations to be published in May on the Army MARS Web site <http://www.netcom.army.mil/MARS>.

==> 2008-2009 ARRL REPEATER DIRECTORIES NOW SHIPPING

With more than 20,000 listings for VHF/UHF repeaters across the US and Canada, "The ARRL Repeater Directory 2008-2009" is a must have. Once again, the ARRL is offering two sizes of the "Repeater Directory" -- pocket size <http://www.arrl.org/catalog/?item=1271> and desktop <http://www.arrl.org/catalog/?item=1298>.

This year, not only is the pocket-sized Repeater Directory a half-inch larger than previous editions, it boasts a larger font size, making for easier reading. For the first time ever, this year's editions feature handy indexing tabs on the cover, easier to read listings and a "Key to Repeater Notes" located right up front in the Directory.

Along with these new features, both editions have the features you know and enjoy from prior years: Repeater operating practices, repeater lingo and hints for newly licensed hams; Frequency Coordinator contact information; listings for D-Star and APCO 25 repeaters; a guide to using CTCSS tones and Digital Coded Squelch (DCS); VHF/UHF band plans and a 2 meter channel-spacing map; IRLP (Internet linked) nodes; tips for handling interference; listings for IRLP, WIRES-II and EchoLink (Internet linked) nodes; emergency message handling procedures, and a transceiver memory log.

Order your copy of The ARRL Repeater Directory 2008-2009 today at the ARRL Online Store <http://www.arrl.org/catalog/?category=What's%20New>.

==>SOLAR UPDATE

Tad "Who bade the Sun clothe you with rainbows" Cook, K7RA, this week reports: The past few days have had very stable geomagnetic conditions. After unsettled to active geomagnetic indicators on March 26-28, conditions quieted down dramatically. Combined with the nearly two-week run of sunspots and the spring season, this makes good HF conditions. There were actually three sunspots, beginning on March 23 with the first one and a sunspot number of 14. March 24 and 25 each brought one new spot; the sunspot number rose to 35 and 52 on those days. Activity peaked between March 26-29 with daily sunspot numbers of 63, 57, 63 and 50. Yesterday, April 3, the sunspot number was back to 14 again, as one-by-one, the three spots drifted from view. Today's sunspot number may be back to zero, and it may stay that way until April 18-20. Sunspot numbers for March 27 through April 2 were 57, 63, 50, 41, 45, 25 and 24 with a mean of 43.6. The 10.7 cm flux was 84.8, 82.9, 82.6, 80.5, 79.2, 77.8 and 75.9 with a mean of 80.5. Estimated planetary A indices were 31, 21, 8, 8, 4, 4 and 1 with a mean of 11. Estimated mid-latitude A indices were 19, 13, 6, 6, 2, 5 and 1, with a mean of 7.4. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you courtesy of Samuel Taylor Coleridge.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, look for the YLRL DX-YL to NA-YL Contest (CW) on April 4-6. The SP DX Contest, the EA RTTY Contest, the QCWA Spring QSO Party, the Missouri QSO Party and the Yuri Gagarin International DX Contest are all on April 5-6. The RSGB RoPoCo 1 is April 6, the RSGB 80 Meter Club Championship (CW) is April 7, the ARS Spartan Sprint is April 8 and the NAQCC Straight Key/Bug Sprint is April 9. The CQ WW WPX Contest (SSB) is March 29-30. Next weekend is the LRL DX-YL to NA-YL Contest (SSB) on April 11-13. The EU Spring Sprint (CW) is April 12. The JIDX CW Contest, Radio Maritime Day and the Georgia QSO Party are April 12-13. Be sure to check out the SKCC Weekend Sprintathon and the UBA Spring Contest (SSB) on April 13. The RSGB 80 Meter Club Championship (SSB) is scheduled for April 16. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, April 20, 2008, for these on-line course sessions beginning on Friday, May 2, 2008: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal

schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Notes from the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, reports that DXCC has completed processing applications for 2007. As such, St Barthelemy (FJ) has been added to the DXCC computer system and Logbook of The World <http://www.arrl.org/lotw>. With the addition, this moves the #1 Honor Roll position to 338 current entities; operators now need 329 entities to qualify for Honor Roll. ARRL "While DXCC has completed applications for 2007, there are a number of application returns still being mailed, so it may be another 2-3 weeks before applicants receive their 2007 return," Moore said. "LoTW is now accepting certificate requests for St Barthelemy; once those logs are submitted, the matches should occur and applicants can claim DXCC credit." For programmers who use the DXCC entity numbering system, the entity code for St Barthelemy is 516. Moore also noted that the 2007 G4GIR/KH9 DXpedition to Wake Island has been approved for DXCC credit: "If you had cards rejected for this operation, please send an e-mail to the ARRL DXCC Desk <dxcc@arrl.org> to have your DXCC record updated."

* Hams Come to Rescue in Utah: Eldon Kearl, K7OGM, of Fish Haven, Idaho, was driving in the Logan Canyon, Utah area last week when he came upon a driver who lost control of her truck in the snow. Her truck fell more than 100 feet over a cliff, and two of the three passengers were thrown from the truck. Witnesses tried to call for help on their cell phones, but the closest cell coverage was more than a 30 minute drive away. Kearl, however, had a radio in his car and was able to get a hold of another ham, Roger Ellis, KE7HTE, of Logan, Utah. Kearl relayed to Ellis information about the accident scene and Ellis called 911. First responders were on the scene within half an hour. Although the driver and passengers in the truck suffered only minor injuries, a spokesman for the Utah Highway Patrol said that if Kearl and Ellis had not responded in getting help so quickly, the injuries could have been much worse. As Kearl said, "It all worked out pretty good." Kearl and Ellis have never met, but live relatively close to each other; they plan on meeting each other in person soon. -- Information provided by KSL-TV, Salt Lake City, Utah

* Dick Jansson, KD1K, Wins March QST Cover Plaque Award: The winner of the QST Cover Plaque Award for March is Dick Jansson, KD1K, for his article "HF Antennas and Restricted Living." Congratulations, Dick! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the April issue by Wednesday, April 30.

* Exhibit Kits Available for Field Day: Visit the ARRL Field Day information page <http://www.arrl.org/fieldday> for all the details on Field Day rules, frequencies, forms, pins, logos and T shirts. The complete Field Day packet

<http://www.arrl.org/contests/forms/fd-2008-packet.pdf> can be downloaded from the site as well. If you have unanswered questions about Field Day, contact ARRL Field Day Manager Dan Henderson, N1ND, via e-mail <fdinfo@arrl.org> or by phone at 860-594-0236. If you want to order exhibit kits containing printed flyers about Amateur Radio, you may order these materials on the ARRL Web site <http://www.arrl.org/brochures/>. The cost of the exhibit kits ranges from $8-$12 depending on shipping. To make sure you'll have the display material in time for Field Day, your order must be received before June 13. ARRL Field Day is always the fourth full weekend in June; in 2008, it is June 28-29.

* Field Day Station Locator Up and Running: This year, for the first time, the ARRL has put together a Station Locator <http://www.arrl.org/contests/announcements/fd/locator.php> to help amateurs or those interested in Amateur Radio find a Field Day <http://www.arrl.org/contests/announcements/fd/> site near them. According to ARRL Field Day Manager Dan Henderson, N1ND, many amateurs have been asking for something like this for many years: "So far, 287 groups in 45 states and 3 Canadian provinces had registered their Field Day site with the Station Locator." If your group would like to be a part of the Station Locator Service, it's easy to get started. Just go to the Field Day Station Locator Web site <http://www.arrl.org/contests/announcements/fd/locator.php> and follow the instructions.

* Transatlantic Balloon to Launch this Weekend: The trans-Atlantic balloon flight of the Spirit of Knoxville V is set to launch April 5 at 2000 EDT (0000 UTC April 6). The balloon, designed to stay aloft for more than 24 hours, will be inserted into the current jet stream at normal flight altitudes of 30,000-40,000 feet. This will take the balloon into Europe over the UK and France at around 40 hours into the flight if all goes well. Using radio frequencies, the balloon transmits data detailing its current location, distance traveled, speed, height and health of the balloon. Last month, the Spirit of Knoxville IV made two-thirds of its journey and crossed the tectonic plate to Europe; organizers hoped the balloon would make to Europe, but after 40 hours and 3300 miles, the balloon lost altitude and went into the ocean as it neared Ireland. The balloon's payload consists of hand-made computers and radios along with a GPS and self-authored software. The onboard computer gathers information from the GPS like altitude, speed and temperature; the computer then determines whether it needs to drop weight to maintain its altitude and sends this information, via Amateur Radio frequencies, to volunteers around the globe. Track the mission live (the live status page will only become active at launch). See the Spirit of Knoxville Web page <http://www.spiritofknoxville.com/> for more information.

* Tim Hulick, W9QQ (SK): ARRL has learned that Tim Hulick, PhD, W9QQ (ex W9MIJ), Captain, USNR retired, of Schwenksville, Pennsylvania, passed away December 28, 2007 after a lengthy battle with cancer. He was 65. Hulick, an ARRL Life Member, also held the calls V47QQ, KG4QQ, HL9QQ and PJ9Q. A 1964 graduate of the US Naval Academy, Hulick served his country for 29 years. Upon retiring from the Navy, he operated Watts Unlimited, producing a lightweight HV Power Supply designed for use as a replacement in older amplifiers. Hulick wrote several articles for QST and QEX, including

"Switching Power Supplies for High Voltage" (QEX, February 1991), "PSK31 on the Road!" (QST, March 2000), and "A Two-Element Vertical Parasitic Array for 75 Meters" (QST, December 1995). Hulick was on the ARRL DXCC Honor Roll with 356 countries; he only needed BS7, but was too sick to mount a serious effort to get them while it was most recently on the air. He worked more than 230 counties while mobile.

He also operated /MM from a number of ships during his Naval career. Hulick was buried with full military honors at Arlington National Cemetery. He is survived by his wife JoAnne, three sons, a daughter and several grandchildren.

* Des Moines Hamfest Location Update: The Des Moines Radio Amateur Association (DSMRAA) will hold their hamfest on April 27 at the 92.5 KJJY Event Center, located at 2100 NW 100th Street in Clive, Iowa. The April issue of QST inadvertently stated the hamfest would be held at the Iowa State Fairgrounds.

* Belgian Satellite to Feature D-STAR Technology: Students at the Universite de Liege in Belgium have built OUFTI-1 <http://www.leodium.ulg.ac.be/cmsms/>, a new Amateur Radio CubeSat featuring D-STAR digital-communication protocol that is used for control and telemetry. Amateur Radio operators from all over the world are able to listen in on the ON0ULG D-STAR repeater on 70 cm <http://www.jfindu.net/dstarlh.aspx?rptr=ON0ULG>; 2 meters will be operational soon. The objective of this nanosatellite project is to provide hands-on experience to students in the design, construction and control of complete satellite systems, ultimately serving as the basis for a variety of space experiments. The first satellite in the series, OUFTI-1, is a CubeSat -- a 10�10�10 cm cube weighing in at no more than one kilogram. -- Information provided by the OUFTI Team

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

I remember an article, probably April '55, where
Rapp described a method of "amplitude discrimination".
If one used such a method, one could simply tune
in the weak signal by tuning out the strong ones.
Such amplitude discrimination required "back to
back limiters". When I asked my Elmer, W5OLV, how
to build a "back to back limiter", he couldn't stop
laughing.

And I remember one solution of his to TVI was to "find seats for the
standing waves...."

Those were the days.   It would be the ultimate joke on us if someone
really was going to publish the "collected works".

Well, they're all on the website! Not limited to members-only, either.

The article to read, though, is the one about the QS-59 receiver. Many
of the features described are common in today's rigs.

Ya know...

It's not just the ARRL that has fun with this kind of thing. CQ
Magazine has a few articles in it this month that are very much in the

4/1 spirit. A Cray based CW contest simulator which will run all the CW contests off the air by 2011? I have to admit that it sounded good until you started thinking though the details and reading the supposed names of those involved. It would *almost* work?

There was another article that was a bit more overt, I just don't remember exactly what it was about.

I have to admit though, the ARRL's "finding of the bad coax jumper and that's why propagation is so bad" thing was a funny one. They had me reading along wondering what all the homeland security stuff was going to be and before I really got the joke I'd read almost half. Classic way to write these things. You simply start to run off the rails of reality a little at a time, throwing in enough truth to distract the reader until as close to the end as possible. Truly good ones leave just about everybody wondering if it's true or not.

I remember The Invisible Antenna article by the Oberlin College Prof. [QST] and 73's "How to turn your [WW2] Command Set into a 5 Band 250 Watt SSB Tranceiver" article. The instructions were easy to follow:

a) First, remove all components except for the fuseholder in the upper right hand corner.

cont. on page 98

Of course, the magazine had 96 pages total...

Hamvention� Names 2008 Award Winners

DAYTON, OH -- Three amateur radio (ham) operators who have made significant contributions to the Amateur Radio Service, will be honored guests when Hamvention� 2008 opens in Hara Arena on May 16.

Recipients of this year's Hamvention� awards are Ward Silver, N0AX, whose books and teaching materials have helped many become hams; Tom McDermott, N5EG, whose technical contributions helped digital ham radio expand; and Emery McClendon, KB9IBW, who started Amateur Radio Military Appreciation Day (ARMAD) in 2003 as a way for Amateur Radio to express support and appreciation for our service men and women.

Frank Beafore, WS8B, Hamvention� Awards Chairman said selecting the winners from the number of worthy nominees presented a tough task for the committee. "We believe the winners all have made significant contributions to the ham radio community. We were impressed with the quality of the nominations."

Hamvention� Chairman Carl Rose, K8CPR, praised the winners, saying: On behalf of the Dayton Amateur Radio Association (DARA) and Hamvention� 2008 it is my pleasure to congratulate this years Award Winners. I ask all hams to join me in recognizing the outstanding contributions and the many years of service the winners have given to the amateur radio service."

Ward Silver, was named Amateur of the Year for his many contributions including Ham Radio for Dummies, his first effort to show that becoming a ham does not have to be a difficult challenge. His additional books, magazine articles and his Hands On column in QST have all helped many hams develop their knowledge and skills. Though he has been honored for his efforts, including receiving the Bill Orr Technical Writing Award from the ARRL, he said, "The best reward, though, is hearing from readers that have found my writing helpful in understanding some aspect of electronics or radio."

He was first licensed at age 17 in 1972 as WN�GQP, and upgraded to Extra and N�AX in 1975. A contester and DXer he appears in the

DXCC Honor Roll, lots of contest Top Ten boxes, and on a few record lists.

While living on Vashon Island, near Seattle WA, he worked closely with community leaders and the Vashon-Maury Island Radio Club (W7VMI) to provide effective emergency communications. Working together, the fire district, CERT, and radio club members have created one of the best local communications systems in the state of Washington.

He continues to pursue a variety of writing and editing projects with the ARRL, such as the training manuals for all three license classes and the ARRL Contester's Rate Sheet biweekly newsletter read by nearly 17,000 subscribers. He said, "Ham radio continues to open doors for me and I am honored to enjoy the friendship of my many ham radio friends in every corner of the globe."

Emery McClendon, KBPIBW, received the Hamvention award for Special Achievement for his efforts starting ARMAD or Amateur Radio Military Appreciation Day in 2003. He said he started ARMAD "as a way to have Amateur Radio serve as a tool for the people of our communities to be able to express 'live' support and appreciation for our Troops, Veterans, Military Retired; and First Responders." The event has become popular and spread to other communities. Several Military Support Groups have developed an interest in having Amateur Radio as a part of their activities. This resulted in Amateur Radio being introduced to thousands of people worldwide that otherwise would have never known about our public service.

McClendon, a native of Fort Wayne, Indiana, who became an Amateur Radio Operator 16 years ago. His interest in organizing Military Special Events came from his four years of service in the U.S. Air Force, and two years in the Indiana Air National Guard. In 2001 he was asked to make Amateur Radio a part of The Vietnam Wall Experience for the City Of Fort Wayne, and in 2003 was asked to organize Amateur Radio into the Fort Wayne Glen Beck Rally For America. The events went so well that he was asked to organize Amateur Radio for the National Rally For America held in Huntington, West Virginia.

He is active with two local Amateur Radio Clubs, and with giving presentations about Amateur Radio to community groups. His activities, including ARMAD, have resulted in many TV, Radio, and media stories over the past five years giving Amateur Radio community exposure.

The Hamvention Technical Achievement Award goes to Thomas C. McDermott, N5EG, for his more than 20 years of involvement in projects which further the development of amateur radio. He co-developed the TexNet packet switching network in 1986, based on datagram routing. In the 1990s it covered much of the south central United States. He was the founder of the Texas Packet Radio Society. In 1994 he developed the TAPR-AMSAT windows software development system for the DSP-93 modem, including software-based instruments (oscilloscope, spectrum analyzer, signal generator). In 1996 he wrote a textbook on Wireless Digital Communications for TAPR, and developed the TAPR VNA in 2004. These projects provide an on-going revenue stream for TAPR to help fund other activities and development projects. Tom received the ARRL technical excellence award in 2005, and is a life member of the ARRL.

He enjoys operating RTTY and an occasional contest. He is married and lives in Medford, Oregon.

Hamvention, the worlds largest amateur radio gathering, brings more than 20,000 people to the greater Dayton area each year. The three-day event includes exhibits, a flea market, forums and education sessions.

==> OHIO ARES TEAMS LEND SUPPORT TO HEPATITIS VACCINATION CLINIC

When news of a hepatitis A outbreak alarmed residents of West Chester, Ohio last month, local officials sprang into action to inoculate more than 1200 people who had eaten at a local fast food restaurant; an employee with a confirmed case of the virus worked at the restaurant in March may have contaminated ice and other food items, health officials said. Inundated with more people than expected, Butler County Health Department and Emergency Management officials were overwhelmed with traffic, communication problems and general logistics of the event. When a second hepatitis A vaccination clinic was scheduled for April 5, officials called on local Amateur Radio operators to assist with communications, as well as traffic and crowd control.

"After the first vaccination clinic was swamped with people coming to get their shots, both the Board of Health and the Emergency Management Agency in Butler County realized they needed assistance," said ARRL Ohio Section Emergency Coordinator Frank Piper, KI8GW. "They had the super idea of bringing in the local ARES group and called on District Emergency Coordinator Robert Spratt, N8TVU, to organize some hams to come help out."

According to Spratt, officials at the first clinic could not communicate on their cell phones due to lack of coverage in the area. "Officials had only planned for about 800 people to show up to get inoculated. When they had more than 1200 people show up, they tried using their cell phones to call and get more vaccine, but they just wouldn't work." Calls made to 911 for police back-up to deal with unruly persons also had trouble getting through, Piper said.

Ohio has a statewide, secure, reliable public service wireless communication for public safety and first responders in place -- MARCS -- used by Emergency Management officials in times when traditional communications systems fail. "When Butler County officials tried to use it at the first clinic, the system displayed 'OUT OF RANGE' or 'NO SIGNAL' messages on every channel," Piper said.

At the second clinic, eight hams from both Butler County and Hamilton County were on site and ready to assist. The clinic, located at a church, was scheduled to run from 10 AM-4 PM. The hams were ready for early crowds; at the first clinic, people were standing in line more than two hours before the doors opened.

"When the ARES team arrived, they established the parking lot area, the traffic flow patterns into and out of the church area and set up the required communications," Spratt said. "ARES members canvassing the complex discovered several other events were ongoing at the facility, including a funeral, fingerprinting for youth sports, a planning meeting for a summer carnival and a planning meeting for the upcoming soccer season. Soccer practice also added to the traffic and pedestrian congestion."

More than 225 people received hepatitis A vaccinations at the second clinic and ARES members directed more than 1200 cars to their correct destinations on the property. The Butler County Health Department officials, clinic staff, the Butler County Emergency Management Agency, the West Chester Police Department and church officials thanked the ARES team for a job well done, all without any reported incidents. Spratt said that the Ohio District 4 ARES teams in Warren, Clermont, Hamilton and Butler counties have had prior Volunteer Reception Center and vaccination clinic operation training that "helped greatly in understanding and knowing what would be needed in the way of communications at the clinic, as well as security, traffic control and crowd control."

Spratt said that people coming to get inoculations "asked about who we were and who we were working for. We made some new friends in the community and recruited three or four people for the upcoming Technician classes. They thought what we were doing as volunteers was great and they want to become part of the team."

Piper concurred with Spratt. "In the Ohio Section, we have the Ohio Section Emergency Response Plan (OSERP)

<http://www.trac-online.org/Docs/oserp.pdf>. This is a small document compared to some ERPs I have seen. This document outlines how ARES is activated in the Section, who reports to whom and how communication flows. DEC Spratt and his team followed the OSERP pretty much to the letter, and it worked well. Many ARES districts have participated with their Regional Medical Response Systems in their assigned districts on tabletop exercises, as well as actual call-up drills. In February, District 3, under the command of ADEC Fred Stone, W8LLY, conducted a Pandemic Flu activation that extended over several days in February, including a real-time snow storm which affected the drill. This vaccination clinic this past weekend proves to all of us that ARES is vital to the emergency medical community."

According to the Centers for Disease Control, hepatitis A is a viral infection that attacks the liver and is spread primarily by close person-to-person contact or by consuming contaminated food.

==> ARRL EXPO AT DAYTON HAMVENTION -- THE COUNTDOWN IS ON!

With just over a month to go, the final details for the ARRL EXPO at the 2008 Dayton Hamvention <http://www.hamvention.org/> are wrapping up and the secrets are being let out! This year's EXPO is meant to not only share in, but to embrace the Dayton Amateur Radio Association's (DARA) -- host of Hamvention -- theme of "Amateur Radio + People = Fellowship" <http://www.w8bi.org/>. With more open-air areas and interactive booths within the ARRL EXPO, we hope to not only convey this message but provide easier opportunities for fellowship within the EXPO, offering more opportunities for interaction with the ARRL family. The Dayton Hamvention will be held May 16-18 at Hara Arena.
